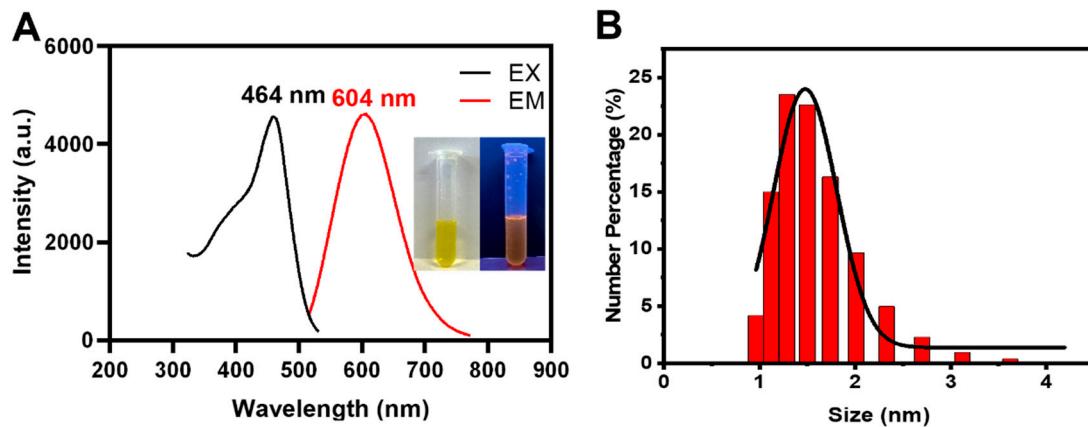

Figure S1. Characterization of GA. (A) The fluorescence spectra of GA, excitation peak at 464 nm and emission peak at 604 nm. Inset are the photos of GA solution under visible (left) and UV light (right). (B) Dynamic light scattering analysis of GA.

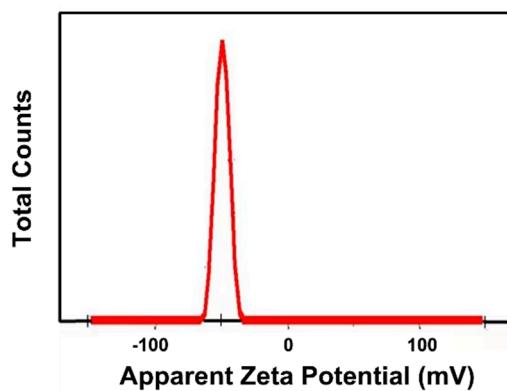

Figure S2. Zeta potential of HA.

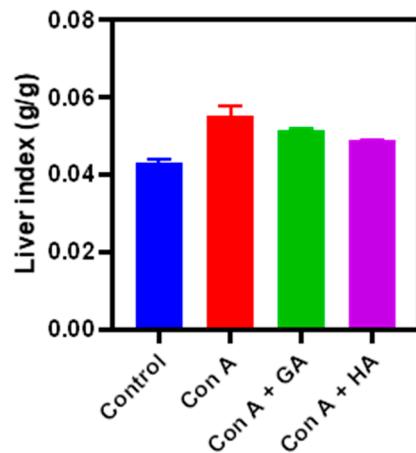

Figure S3. Liver index of Con A-induced AIH mice after GA and HA treatment.

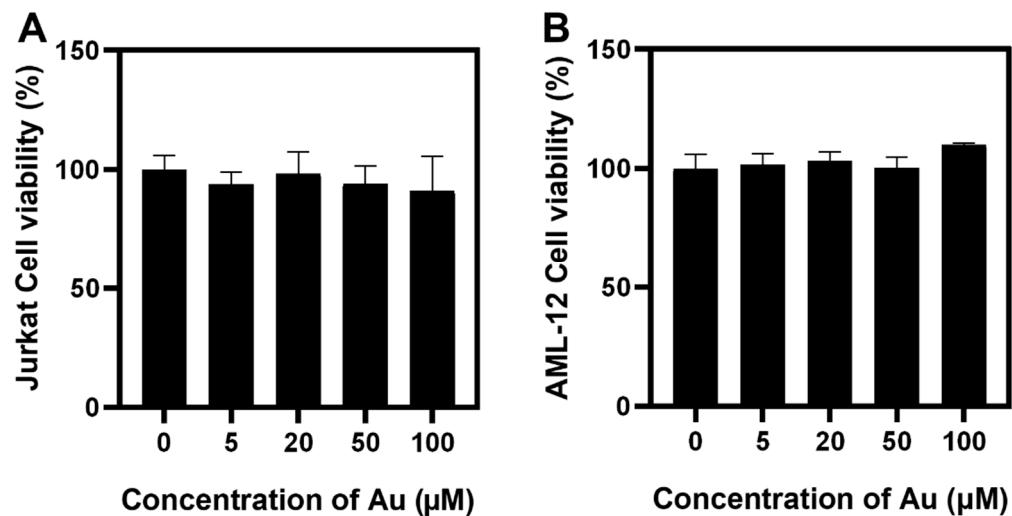

Figure S4. Cytotoxicity of HA on (A) Jurkat cells and (B) AML12 cells after incubation for 24 h that evaluated by CCK-8.

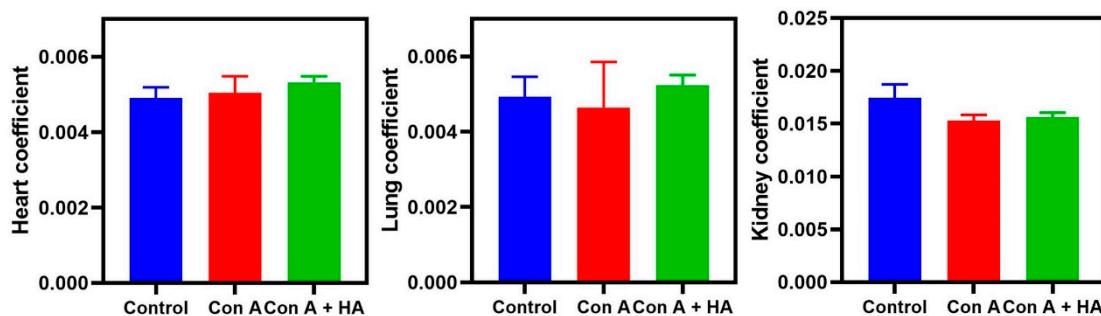

Figure S5. Organ coefficients of heart (A), lung (B) and kidney (C) after HA treatment.

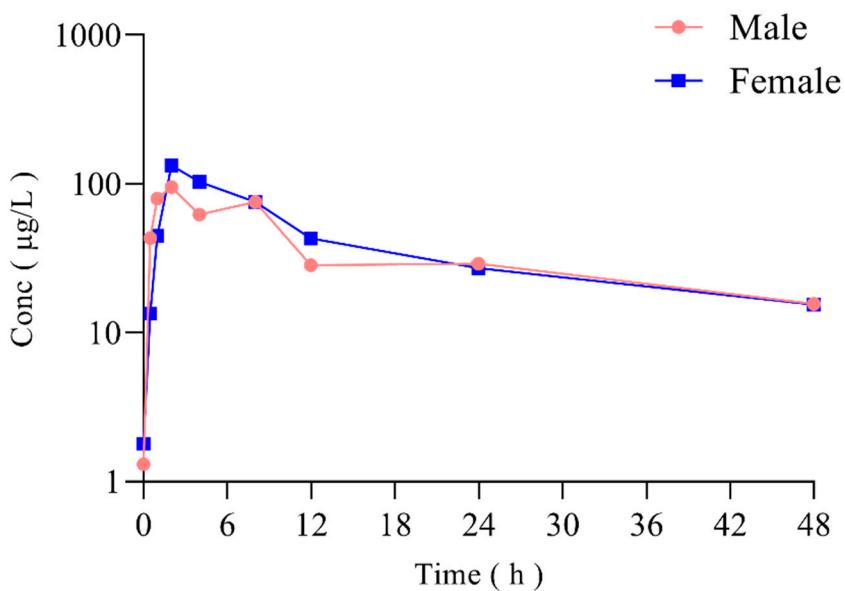

Figure S6. Concentrations of Au in the serum of male and female SD rat following intraperitoneal injection of HA at a dose of 7.5 mg Au·kg⁻¹. Observed concentrations are shown as symbols, and the concentrations predicted by the model are shown as lines.

Table S1. Values of parameters of the Pharmacokinetic of HA in rats.
