Table S1. Description of FLUXNET sites and available years used in this study. PFT— Plant Functional type (ENF—Evergreen Needleleaf Forest; EBF—Evergreen Broadleaf Forest; DBF—Deciduous Broadleaf Forest; GRA—Grassland; CRO—Cropland; WSA—Woody Savanna; OSH—Open shrubland). MODIS 250m date is the date of selected MOD13Q1 NDVI images at 250-m and 16-days used for the development of the Spatial Heterogeneity Indicator (SHI).

Figure S1

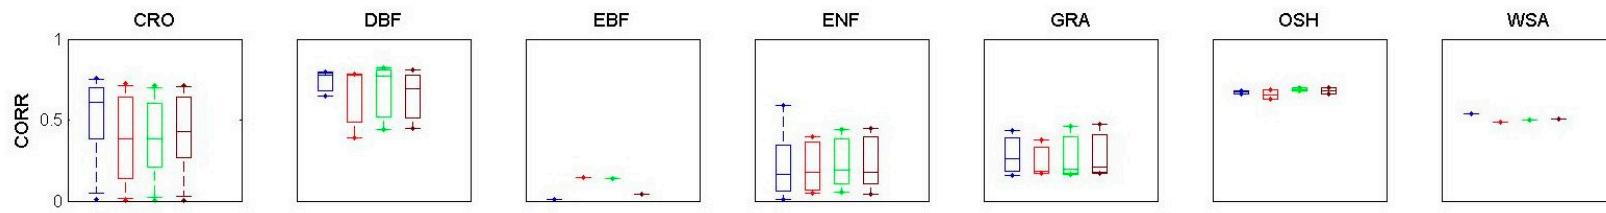

Figure S1. Results of the statistical analysis between NDVIis and NDVIMD for different spatial resolutions in km (1×1 blue, 3×3 red, 5×5 green, and 7×7 brown) across PFTs (see Table S1 for the definition) on a site \times year basis. CRO: Cropland; DBF: Deciduous broadleaf forest; EBF: Evergreen broadleaf forest; ENF: Evergreen needle leaf forest; GRA: Grassland; OSH: Open shrubland; and WSA: Woody savanna. CORR—coefficient of determination. The top and bottom of a "box" represents the 25th and 75th percentile of the sample, respectively, and the distance between top and bottom is the interquartile range. The line in the middle of a box represents the median value. The whiskers are drawn from the ends of the interquartile ranges to the 25th and 75th percentiles. The highest/lowest annual outlier scores are displayed with a black + sign.
