FER, food efficiency ratio; SI, small intestine; “-”, not applicable; ns, not significant; Values are mean ± SEM, *n* = 7; Mean values were significantly different from values of control group with butter: * *p* < 0.05 (one-way ANOVA and post-hoc Dunnett’s test); Mean values were significantly different from values of the LF group: [#] *p* < 0.05, ^{##} *p* < 0.01, ^{###} *p* < 0.001 (one-way ANOVA and post-hoc Dunnett’s test).

Figure 1. Effects of glycerol on cecal short-chain fatty acids, liver lipids and intestinal permeability in rats fed a high-fat control diet with butter (0) or the same diet supplemented with 0.5 glycerol g/100 g (0.5 G) for 3 weeks. (a) Acetic acid ($\mu\text{mol/g}$), (b) total SCFA ($\mu\text{mol/g}$), (c) total cholesterol (mg/g), (d) triglycerides (mg/g), (e) lactulose (μM), (f) mannitol (mM). Values are means $\pm$ SEM. Mean values were significantly different from the control group: * $p < 0.05$. SCFA, short-chain fatty acids.

Figure 2. Serum lipids in rats fed a low-fat (LF) diet, a high-fat control diet based on lard (La), or the same La diet supplemented with 0.5 MB g/100g (dry weight basis) (La + 0.5 MB) for 4 weeks. (a) Portal vein serum HDL-cholesterol (mmol/L), (b) portal vein serum triglycerides (mmol/L), (c) tail vein serum total cholesterol at week 3 (mmol/L), (d) tail vein serum LDL-cholesterol-to-HDL-cholesterol ratio at week 1, (e) aortic serum triglycerides-to-HDL-cholesterol ratio. Values are means $\pm$ SD. Mean values were significantly different from the control group: * $p < 0.05$ (one-way ANOVA and post-hoc Dunnett's test). MB, monobutyrin; LDL-cholesterol, low density lipoprotein-cholesterol; HDL-cholesterol, high-density lipoprotein-cholesterol; TG, triglycerides.

Figure 3. Effects of MB on lipids profiles in rats fed a low-fat (LF) diet, a high-fat control diet with lard (La), or the same diet supplemented with 0.5 MB g/100g (dry weight basis) (La + 0.5 MB) for 4 weeks. (a) Separation of the experimental groups, (b) relationship between measured lipid variables (4-point stars) and the experimental groups (circles). MB, monobutylin; CHOL, cholesterol; TG, triglycerides; LDL, low-density lipoprotein-cholesterol; HDL, high-density lipoprotein-cholesterol.
