Data are shown as mean [95% CI]. Within-group changes after 12 and 52 weeks were analysed using Wilcoxon Test (in case of normal distribution using paired T-Test). \*\*\*  $p < 0.001$  vs. baseline; \*\*  $p < 0.01$  vs. baseline; \*  $p < 0.05$  vs. baseline. Differences in changes after 12 as well as 52 weeks between both groups were analyzed using ANCOVAs adjusting for baseline values and partly for the interaction term ‘group x baseline value’.
