SD, standard deviation; SBP, systolic blood pressure; DBP, diastolic blood pressure; CIMT, Carotid Intima-Media Thickness; PWV, Pulse Wave Velocity; AIx, Augmentation Index; BMI, body mass index; WC, waist circumference; HDL-C, high density lipoprotein cholesterol; LDL-C, low density lipoprotein cholesterol; HOMA-IR, Homeostasis model assessment insulin resistance;

Data was analysed for 3097 males for all CVD risk factors. For CIMT, PWV, and AIx, data was analyzed for 1682, 1658 and 1584 males, respectively; 1 SD of total meat for male for all CVD risk factors was equal to 27.79 grams/day; 1 SD total meat for male for CIMT was equal to 25.92 grams/day; 1 SD total meat for male for PWV was equal to 26.00 grams/day; 1 SD total meat for male for AIx was equal to 26.67 grams/day; * significant association after accounting for the effect of multiple testing using the Benjamini–Hochberg method; * β -coefficient of 0.32 means that a 1 SD (27.79 grams/day) increase in meat intake among male participants was associated with 0.32 kg/m² higher BMI after adjusting for the effect of potential confounders on BMI. ^b β -coefficient of 0.46 means that a-10 gram per 1000 kcal per day increase in meat intake among male participants was associated with 0.46 kg/m² higher BMI after adjusting for the effect of potential confounders on BMI.

SD, standard deviation; SBP, systolic blood pressure; DBP, diastolic blood pressure; CIMT, Carotid Intima-Media Thickness; PWV, Pulse Wave Velocity; AIx, Augmentation Index; BMI, body mass index; WC, waist circumference; HDL-C, high density lipoprotein cholesterol; LDL-C, low density lipoprotein cholesterol; HOMA-IR, Homeostasis model assessment insulin resistance;

Data was analysed for 2675 females for all CVD risk factors. For CIMT, PWV, and AIx, data was analyzed for 1493, 1493, and 1411 females, respectively; 1 SD of total meat for female for all CVD risk factors was equal to 14.72 grams/day; 1 SD total meat for female for CIMT was equal to 14.93 grams/day; 1 SD total meat for female for PWV was equal to 14.93 grams/day; 1 SD total meat for female for AIx was equal to 15.07 grams/day; * significant association after accounting for the effect of multiple testing using the Benjamini–Hochberg method;

*β-coefficient of **2.21** means that a 1 SD (14.28 grams/day) increase in meat intake among female participants was associated with 2.21 mg/dL higher total cholesterol after adjusting for the effect of potential confounders on total cholesterol.

†β-coefficient of **3.10** means that a 10 gram per 1000 kcal per day increase in meat intake among female participants was associated with 3.10 mg/dL higher total cholesterol after adjusting for the effect of potential confounders on total cholesterol.

Supplementary Table S3. Association between total meat intake and CVD risk factors and measures of subclinical atherosclerosis among *males* with no diagnosis of CVD or DM or hypertension: β-coefficients (95% confidence interval) per SD change and 10 gram per 1000 kcal per day of meat intake

AIx, Augmentation Index; BMI, body mass index; CIMT, Carotid Intima-Media Thickness; CMD, cardiometabolic diseases; DBP, diastolic blood pressure; HDL-C, high density lipoprotein cholesterol; HOMA-IR, Homeostasis model assessment insulin resistance; LDL-C, low density lipoprotein cholesterol; SD, standard deviation; SBP, systolic blood pressure; PWV, Pulse Wave Velocity; WC, waist circumference; Data was analysed for 3184 males for all CVD risk factors. For CIMT, PWV, and AIx, data was analyzed for 1730, 1707, and 1631 males, respectively; 1 SD of total meat for male for all CVD risk factors was equal to 27.72 grams/day; 1 SD total meat for male for CIMT was equal to 25.87 grams/day; 1 SD total meat for male for PWV was equal to 25.95 grams/day; 1 SD total meat for male for AIx was equal to 26.35 grams/day; *significant association after accounting for the effect of multiple testing using the Benjamini-Hochberg method.

Supplementary Table S4. Association between total meat intake and CVD risk factors and measures of subclinical atherosclerosis among *females* with no diagnosis of CVD or DM or hypertension: β -coefficients (95% confidence interval) per SD change and 10 gram per 1000 kcal per day of meat intake

CVD risk factor	Regression Models	Per SD change		10 gram/1000 kcal/day	
		β -coef (95% CI)	p-value	β -coef (95% CI)	p-value
