Table S4. The deviance information criterion (DIC) difference relative to the intercept-only model*.

Variable	VAD		MVAD	
	DIC difference		DIC difference	
Age	-47.5		-28.0	
Setting	-23.4		-16.9	
Investigation year	4.6		30.4	
Gender	7.3		0.2	
Age and Setting	-59.5		-38.2	

*DIC difference=DIC for model with variable(s) of interest - DIC for intercept-only model;
The effect of gender was based on studies that reported the prevalence estimates for both boys and girls; The effect of investigation year was based on studies conducted after the year 2000.
