Figure S3. LAMP, qPCR and end-point PCR primers alignment with the aflT gene of *A. flavus* (GenBank AF515601.1) showing the exons and introns.

Figure S4. Agarose gel of the 308 bp amplicon obtained with primers AfF and AfR of the 97 *Aspergillus* spp. used in this study.

Figure S5. Agarose gel showing the limit of detection of the 308 bp PCR with the primers AfF and AfR. 1: GelPilot Wide Range Ladder (QIAGEN); 2: GelPilot 100 bp Ladder (QIAGEN), 3: *A. flavus* FV3 (110 ng/μL); 4: *A. flavus* FV3 (11 ng/μL); 5: *A. flavus* FV3 (1.1 ng/μL); 6: *A. flavus* FV3 (110 pg/μL); 7: *A. flavus* FV3 (11 pg/μL); 8: *A. flavus* FV3 (1.1 pg/μL); 9: *A. flavus* FV3 (110 fg/μL); 10: *A. flavus* FV3 (11 fg/μL); 11: Negative Control with water; 12: GelPilot 100 bp Ladder (QIAGEN); 13: GelPilot Wide Range Ladder (QIAGEN).

Figure S6. LAMP amplifications exported from the Genie II® instrument (A), and melting peaks (B) of 10-fold dilutions of the DNA of *A. flavus* FS7 strain. The amplification was confirmed by running an agarose gel of one of the three replicates of each dilution (C).

Figure S7. qPCR standard curves with SYBR Green (A), and TaqMan® probe standard curves using the DNA of *A. flavus* (FS7) (B) and *A. parasiticus* (AFLX6) (C).

Table S1. Reference strains used in this study to check the specificity of the LAMP assay (Tp, time to positive) and the qPCR assays (Ct). The PCR results reported the presence or absence of a 308 bp-amplicon. Aflatoxin production is reported in ppm. Neg=negative, Pos=positive; n.d.: not detected; Melting: melting temperature.

Strain	Species	PCR result	LAMP Assay		qPCR with TaqMan® Probe (Ct)	qPCR with SYBR Green		Mycotoxin Production (ppm)

Table S2. Other species used in the specificity panel of the LAMP assay (Tp, time to positive) and the qPCR assay (Ct). The PCR results reported the presence or absence of a 308 bp-amplicon. Standard deviation was included for each Tp and melting temperature. Tp: time to positive. Anneal: melting temperature.
