S1B

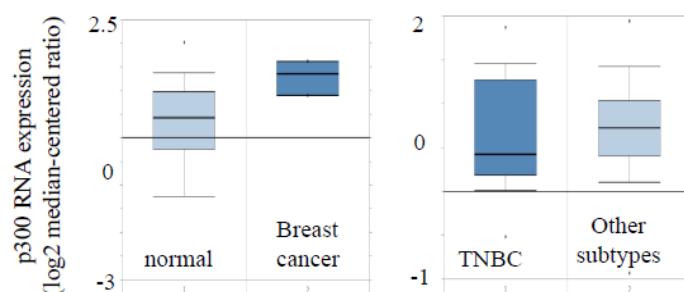

Figure S1. p300 genomic and transcriptional alterations in BC. (A) Ten publicly available data sets show genetic alterations in p300 in breast cancer (cBioPortal). (B) RNA expression levels of p300 in the TCGA BC data set ($n = 593$); left box plot: normal breast tissue compared to BC (2.1-fold BC vs. normal, $p = 0.008$), right box plot TNBC compared to BC other subtypes (-1.1-fold TNBC vs. others, $p = 0.839$) (Oncomine database).

S2

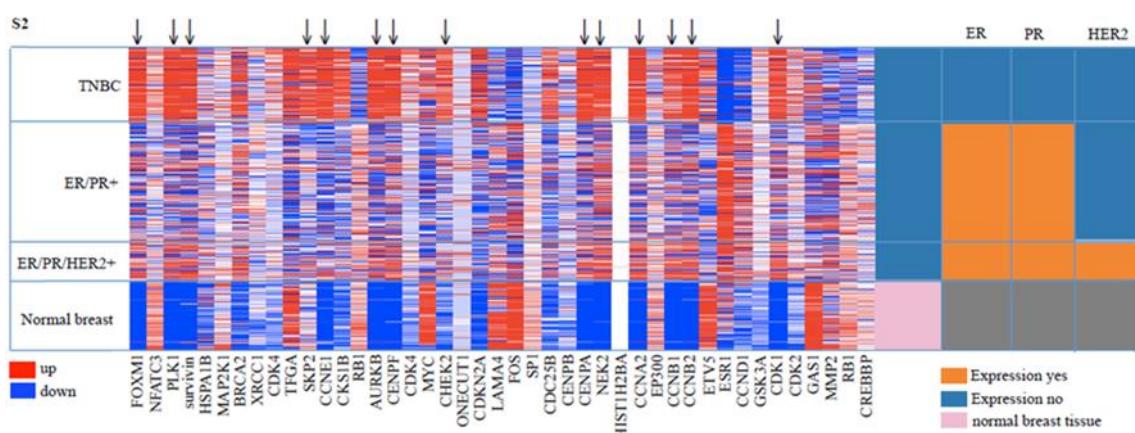

Figure S2. TCGA data analysis shows that FOXM1 and its target genes are over-expressed in TNBC. TCGA breast cancer data dataset visualization via the Santa Cruz Cancer Genome Browser (individual BC cases represented in rows, genes represented in columns) showing a FOXM1 transcription network in different breast cancer subtypes and normal breast tissue ($n = 817$ samples, 82 TNBC). The arrows indicate highly expressed genes in TNBC samples in the TCGA BC data set

that are down-regulated in MDA-MB-231 cells treated with ICG-001 compared to DMSO control (shown in Figure 4A).

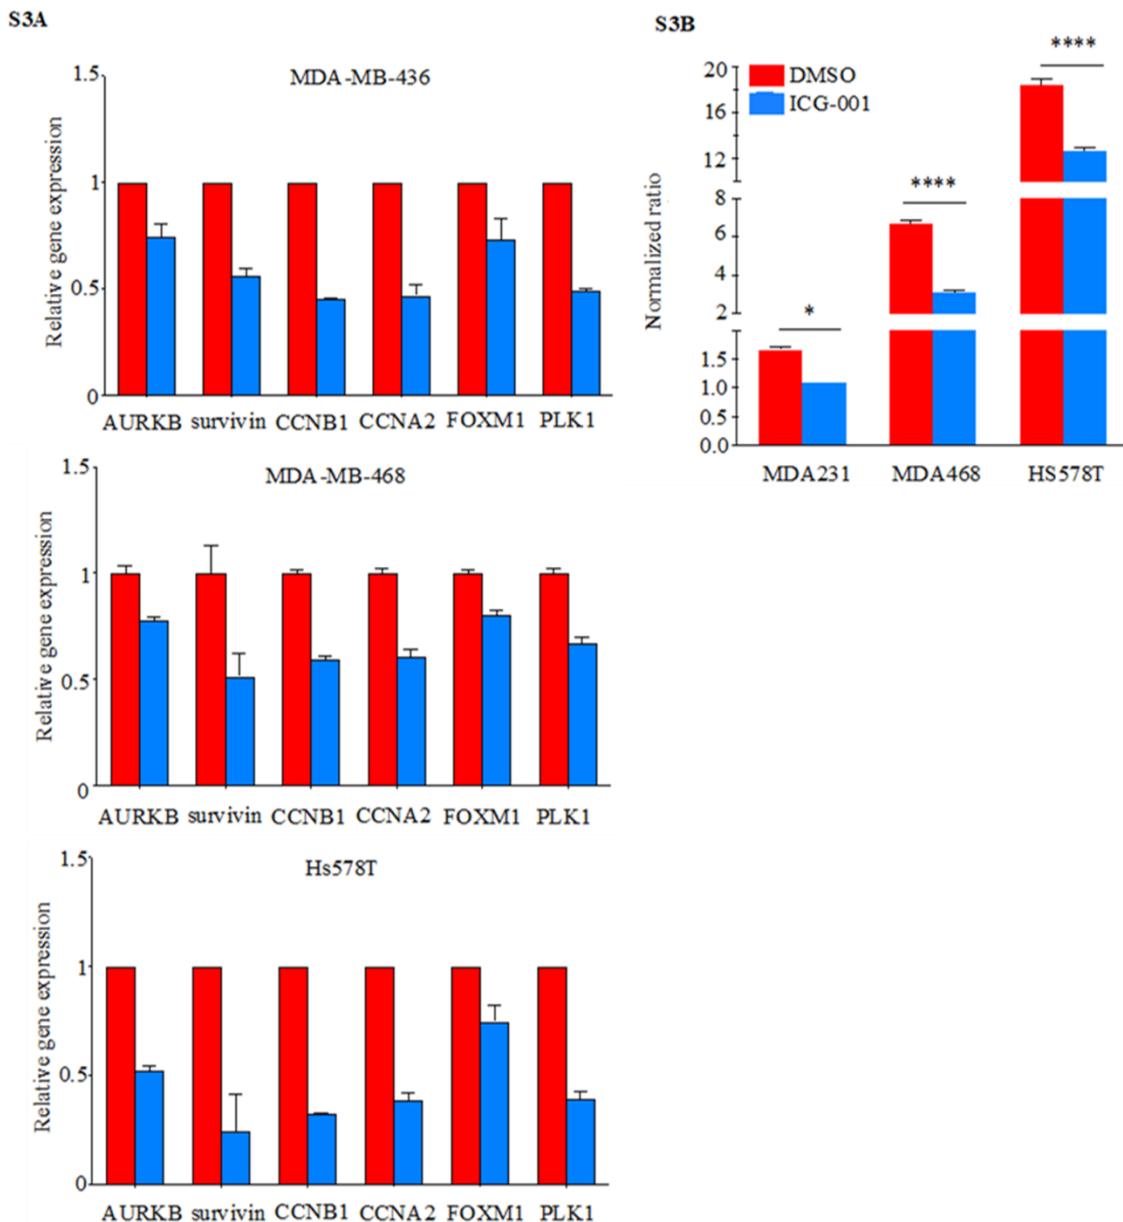

Figure S3. FOXM1 reporter activity and target gene expression in three additional TNBC cell lines. (A) FOXM1 target gene expression in three TNBC cell lines treated for 24 h with 10 μ M ICG-001 or DMSO vehicle control. (B) FOXM1luc^{Firefly/Renilla} reporter for three TNBC cell lines (MDA-MB-231, MDA-MB-468, Hs578T) treated for 24 h with either 10 μ M ICG-001 or DMSO vehicle control (bars represent normalized ratios of FOXM1 Firefly luciferase to control vector Renilla luciferase expression; $N = 3$ per condition per cell line) (* $p < 0.05$, **** $p < 0.0001$).

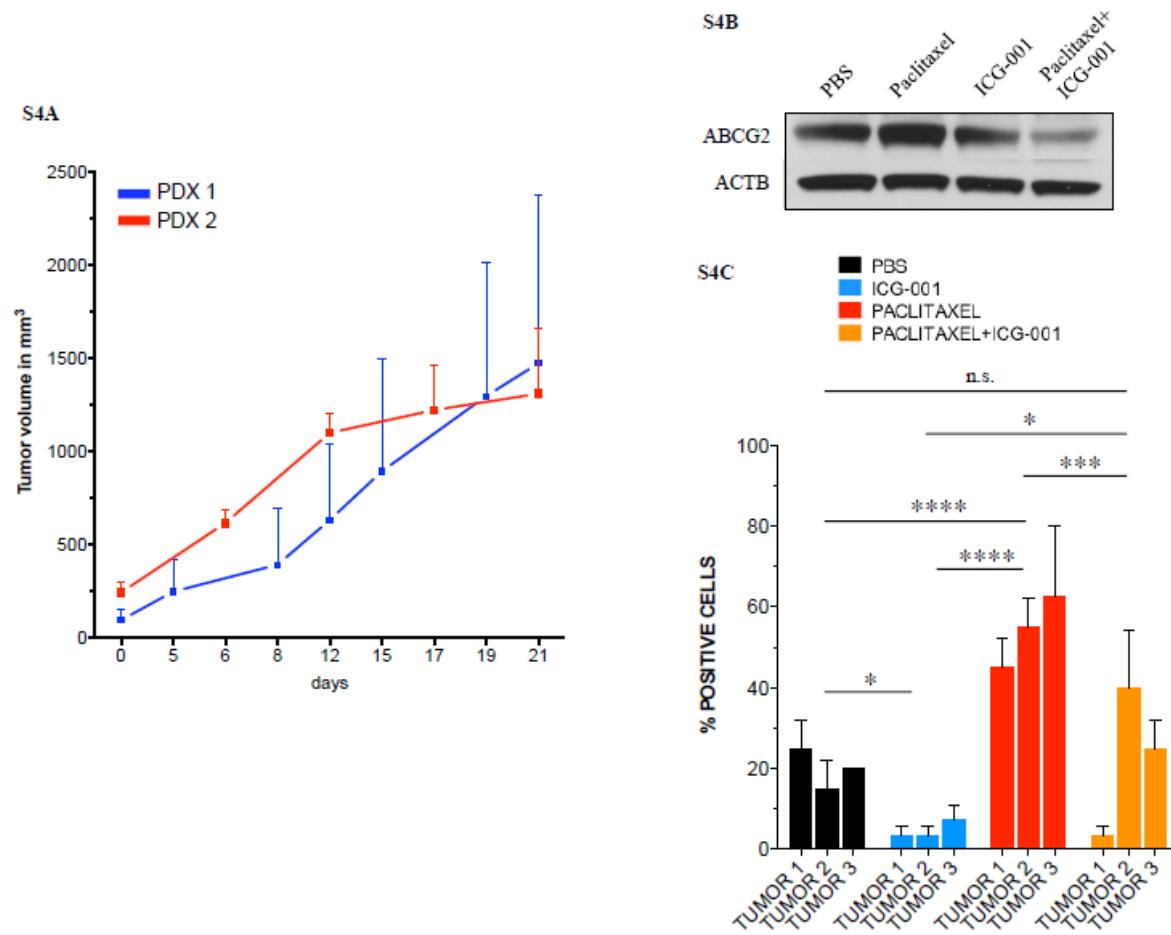

Figure S4. Protein quantification of FOXM1 and ABCG2 in PDX2 bearing mice post treatment. (A) Growth curves for PBS control treated xenograft tumors. (B) Western blot protein quantification post treatment (primary xenograft) for ABCG2 in tumors from mice bearing PDX2. (C) Immunohistochemistry post treatment (primary xenograft) for FOXM1 on tumors from mice bearing PDX1 (3 Tumors per condition, 2 sections per tumor) (* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, **** $p < 0.0001$, Statistically insignificant results are listed n.s.).

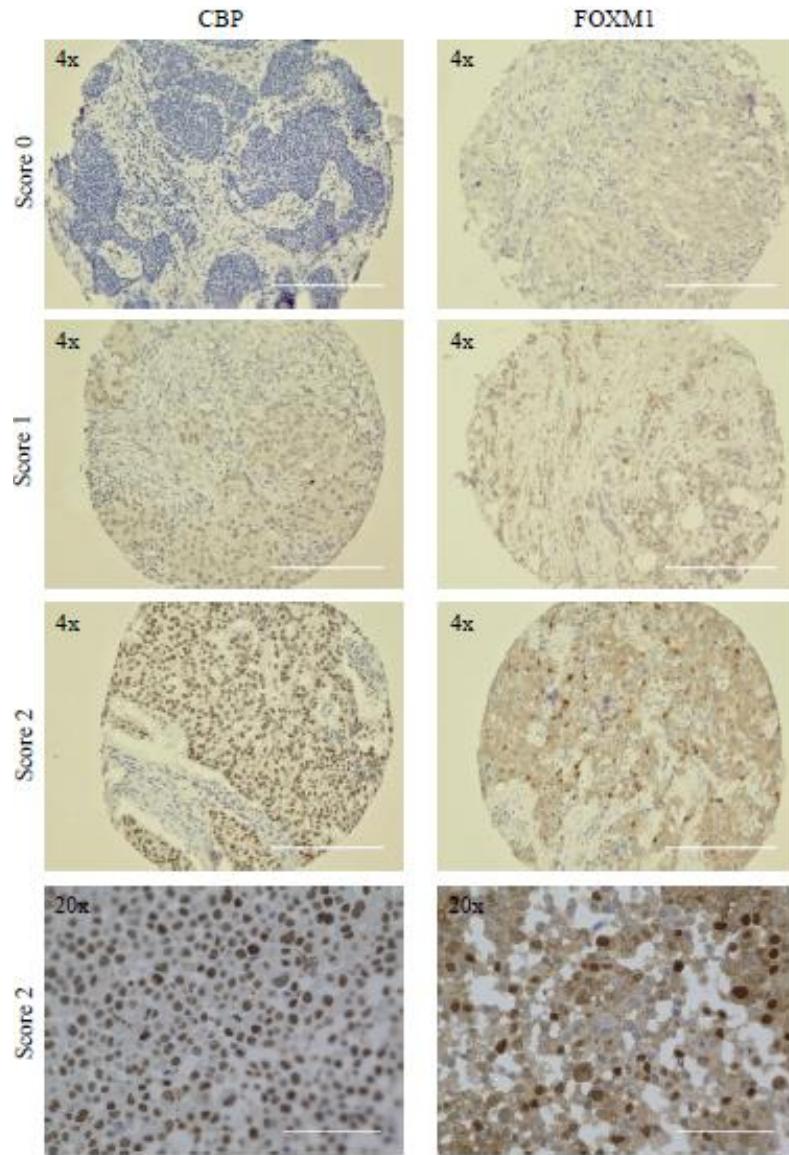

Figure S5. Representative staining of TMA slides for FOXM1 and CBP; top three panels–4 \times magnification, scale bar = 200 μ m, bottom panel–20 \times magnification (scale bar = 100 μ m).

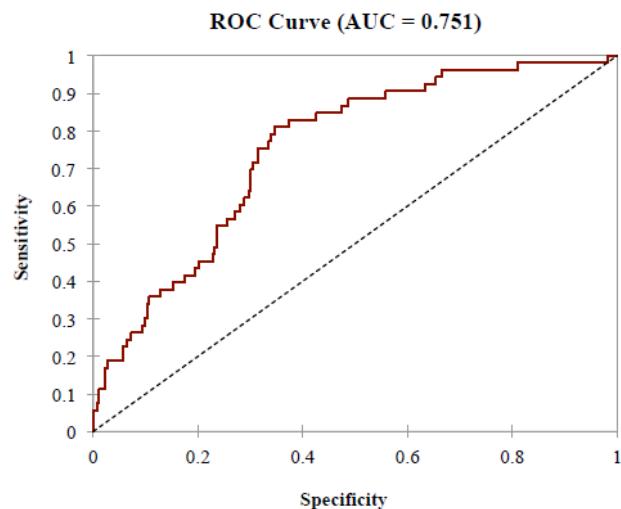

Figure S6. Receiver operating characteristic (ROC) curve for FOXM1 as a biomarker for TNBC and high grade (III) tumors.

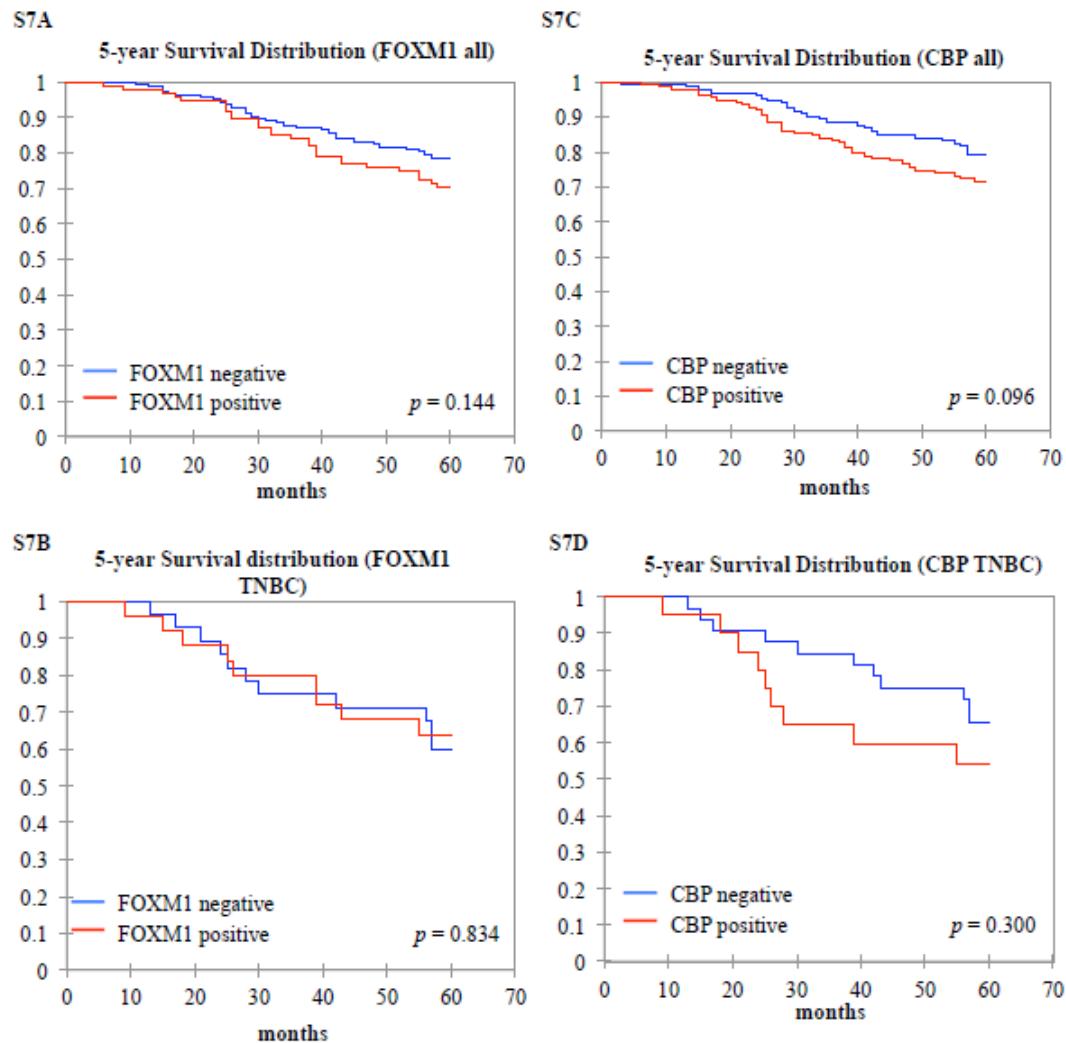

Figure S7. TMA Kaplan Meier survival analysis in BC using FOXM1 and CBP. (A) OS survival based on FOXM1 expression in TMA all BC patients ($n = 316$). (B) OS survival based on FOXM1 expression in TMA TNBC patients ($n = 52$). (C) OS survival based on CBP expression in TMA all BC patients ($n = 316$). (D) OS survival based on CBP expression in TMA TNBC patients ($n = 52$).

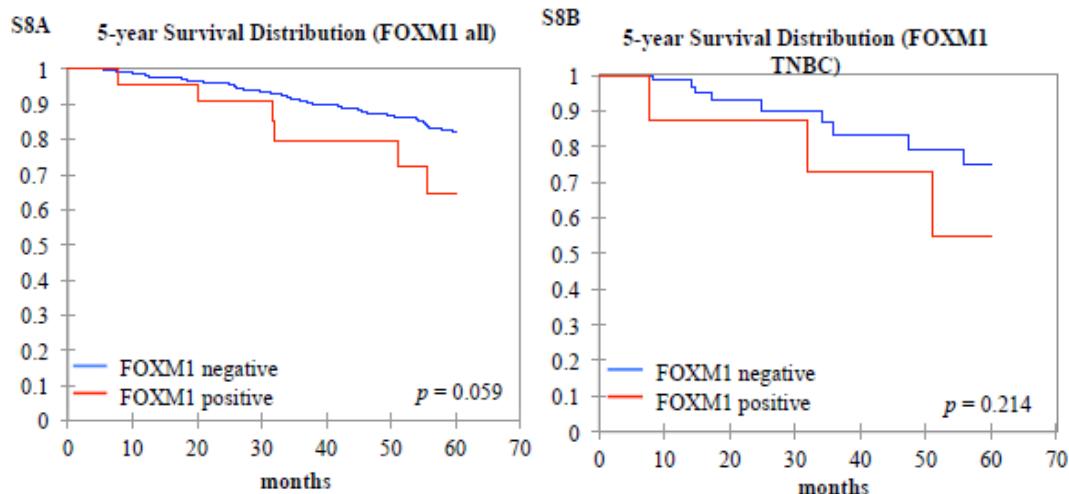

Figure S8. TCGA Kaplan Meier survival analysis in BC using FOXM1 and CBP. (A) OS survival based on FOXM1 expression in TCGA BC patients of all subtypes ($n = 817$). (B) OS survival based on FOXM1 expression in TCGA TNBC patients ($n = 82$).
