Supplementary Figure S1

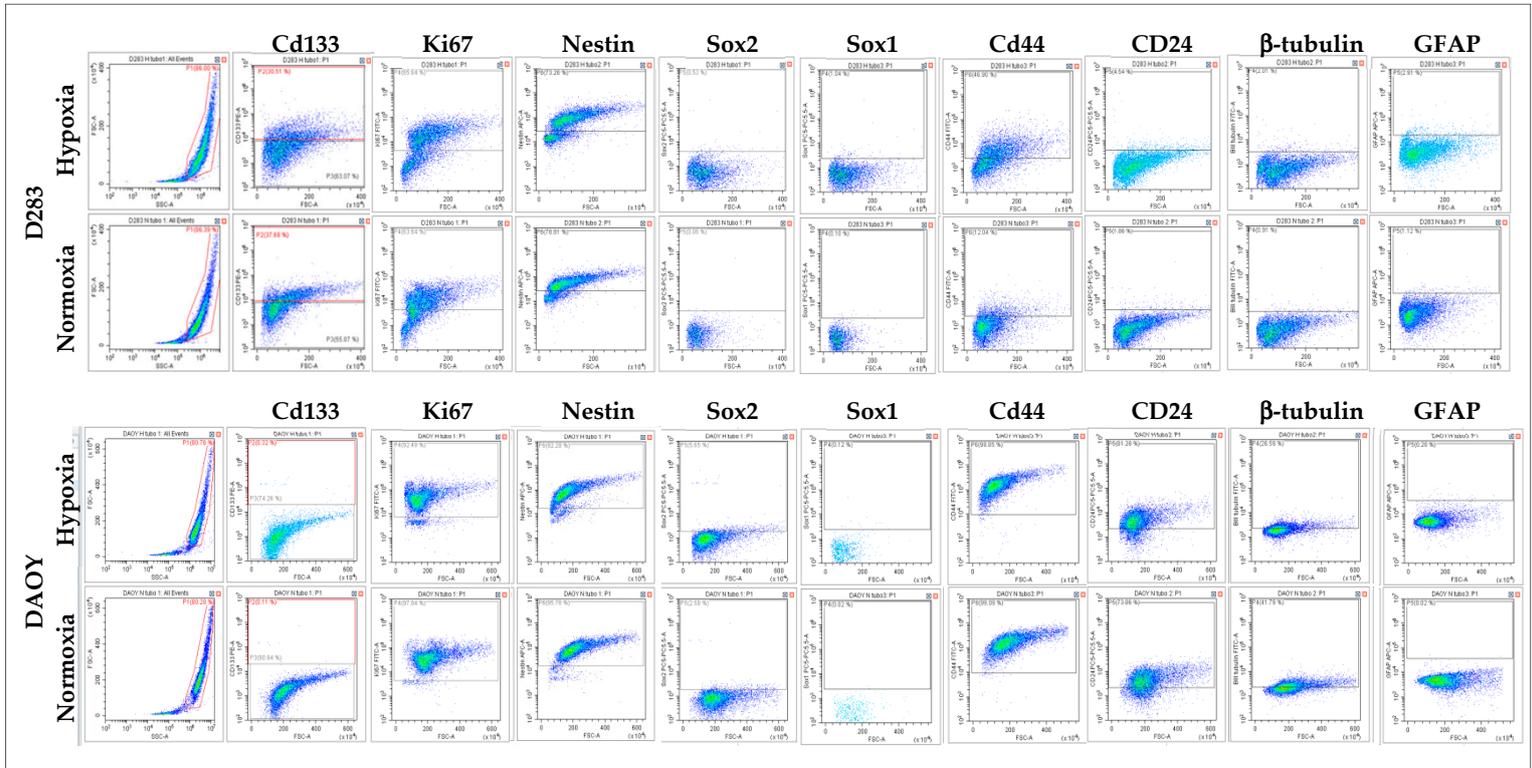

Figure S1. Stemflow Human Neural Lineage Analysis in different oxygen conditions. Representative images of stemflow analysis of D283 and DAOY cell lines showing that their stemness markers expression levels were not influenced by oxygen culture conditions.

Supplementary Figure S2

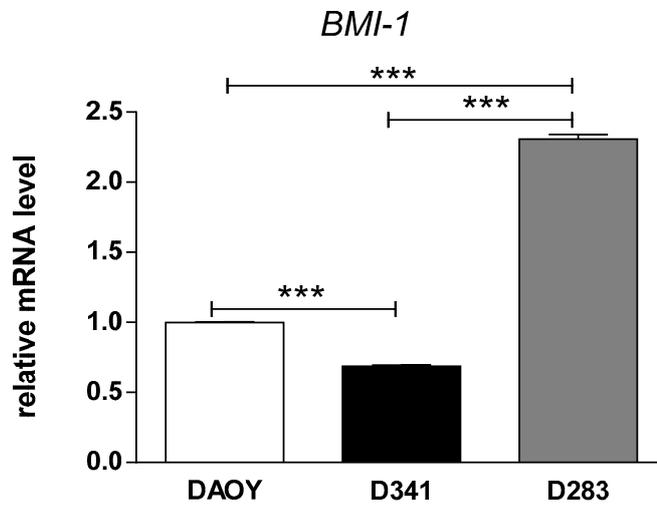

Figure S2. Gene expression of BMI 1. DAOY expression levels are taken as 1. Data are shown as mean of three biological replicates \pm SEM. Differences were tested with Student's t-test. * $P < 0.05$, ** $P < 0.001$; *** $P < 0.0001$.

Supplementary Figure S3

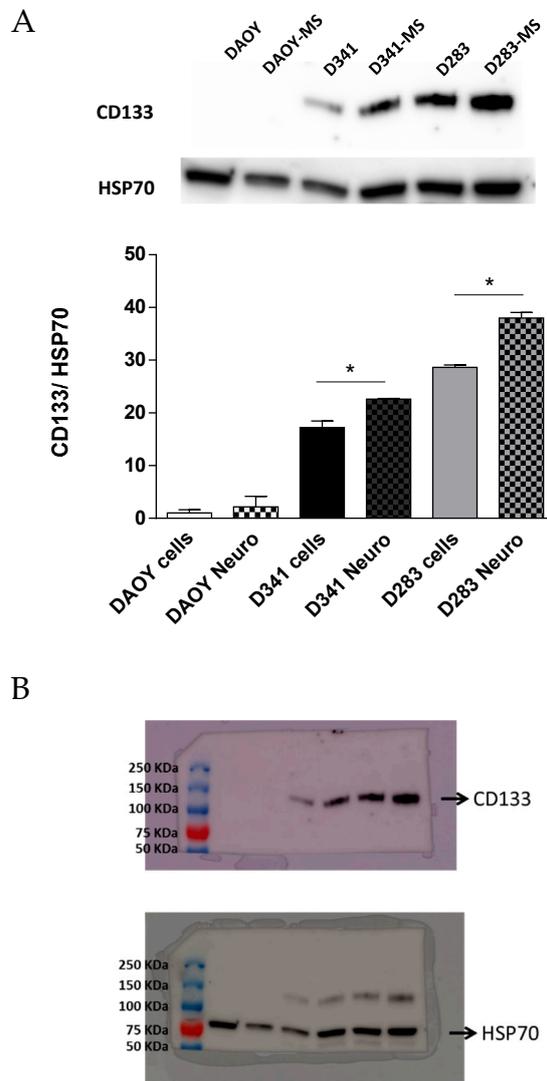

Figure S3. CD133 protein expression. Western blot analysis and relative densitometric representation of CD133 expression level in DAOY, D341 and D283 MB cells, cultured in normal or in MS medium (A). DAOY expression level are taken as 1. Data are shown as mean of three biological replicates \pm SEM. Differences were tested with Student's t-test. * $P < 0.05$.) Uncropped western blots related to the panel A (B).

Supplementary Figure S4

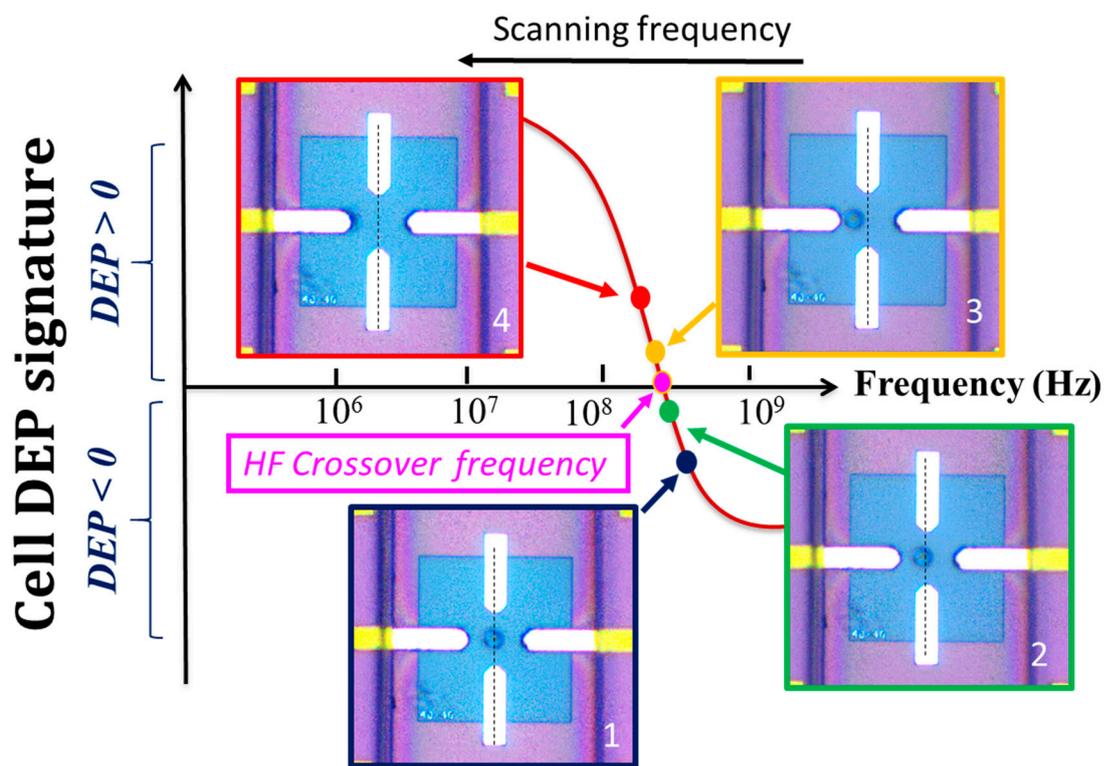

Figure S4. HF cross over frequency. Representative scheme showing cell movement from negative to positive DEP as a function of the applied frequencies (at step of 1 MHz).

Supplementary Table S2. List of primers used for quantitative real time PCR.
