

Supplemental Table S1: Characteristics of all clinical trials using CAR-T cells against solid tumors. Data was collected from clinicaltrials.gov and literature search on pubmed.ncbi.nlm.nih.gov.

Antigen	Cancer	CAR type /add-ons	CAR transfer	Mode of injection	Number of cells	Phase	Patient # /pretreatment /other drugs	Outcome	NCT# /Status /PI	Ref	Origin	Adverse events
AFP (alpha feto-protein)/HLA-A2	HCC	*ET1402L1-CART *Human antibody domain against the anti-HLA-A02/AFP complex *scFv-CD28/CD3ζ	lentiviral	iv, iha	dose escalation	phase 1	*est. enrollment: 18	1/6 CR, 2/6 PR	NCT03349255; Terminated (Will study new T-cell construct for the same indication); PI: Qibin Song	[158]	Renmin Hospital of Wuhan University, China	
AFPpeptide/HLA-A2	*HCC *(metastatic) Liver cancer	*2nd gen. ARTEMISTM receptor engineered with a human antibody domain against the anti-HLA-A02/AFP complex	lentiviral	iv, it, iha	dose escalation	early phase 1	*est. enrollment: 27		NCT03888859; recruiting PI: Chang Liu		First Affiliated Hospital Xi'an Jiaotong University, China	
B7-H3	*Recurrent glioblastoma *Refractory glioblastoma	?	retroviral	it, intracerebroventricular	?	phase 1/2	*est. enrollment: 40 *Temozolomide		NCT04077866; recruiting; PI: ?		*Second Affiliated Hospital of Zhejiang University *School of Medicine, Hangzhou, Zhejiang, China *Huzhou Central Hospital, Huzhou, Zhejiang, China *Ningbo Yinzhou People's Hospital, Ningbo, Zhejiang, China	
B7-H3	*Central nervous system tumor *Diffuse intrinsic pontine glioma *Diffuse midline glioma *Ependymoma *Medulloblastoma *Childhood germ cell tumor *Atypical teratoid/rhabdoid tumor *Primitive neuroectodermal tumor *Choroid plexus carcinoma *Pineoblastoma *Childhood glioma	*B7H3-specific 2nd gen. CAR *EGFRt	lentiviral	tumor resection cavity or ventricular system	?	phase 1	est. enrollment: 70		NCT04185038; recruiting; PI: Nick Vitanza		Seattle Children's Hospital, Seattle, Washington, USA	
B7-H3	*Pediatric solid tumor *Germ cell tumor *Retinoblastoma *Hepatoblastoma *Wilms tumor *Rhabdoid tumor *Carcinoma *Osteosarcoma *Ewing sarcoma *Rhabdomyosarcoma *Synovial sarcoma *Clear cell sarcoma *Malignant peripheral nerve sheath tumors *Desmoplastic small round cell tumor *Soft tissue sarcoma *Neuroblastoma *Melanoma	Arm A: *scFv-4-1BB/CD3ζ specific for B7-H3 *EGFRt for depletion with cetuximab Arm B: *scFv-4-1BB/CD3ζ specific for B7-H3 and *scFv-4-1BB/CD3ζ specific for CD19 *Her2tG for depletion with trastuzumab	lentiviral	?	?	phase 1	est. enrollment: 68		NCT04483778; recruiting; PI: Navin Pinto		Seattle Children's Hospital, USA	
B7-H3	r/r glioblastoma	?	retroviral	it, intracerebroventricular	3 infusions, 1-2 weeks interval	phase 1	*est. enrollment: 12 *Temozolomide		NCT04385173; recruiting; PI:?		Second Affiliated Hospital, School of Medicine, Zhejiang University, China	
B7-H3 (CD276)	B7-H3 pos. solid tumor	4SCAR-276	lentiviral	?	approx. 10 <sup>6</sup> CART cells/kg	phase 1/2	*est. enrollment: 100 *cy+flu		NCT04432649; recruiting; PI: ?		*Sun Yat-sen University *Shenzhen Children's Hospital *Shenzhen Geno-Immune Medical Institute , China	
CD20	Unresectable stage III or IV melanoma	MB-CART20.1	lentiviral	iv	*MTD, 3+3 design with 1 log dose increments, maximum 3 dose levels *level 1: 3+3 patients 1x10 <sup>5</sup> CART20.1/kg *level 2: 3+3 patients 1x10 <sup>6</sup> CART20.1/kg *level 3: 3+3 patients 1x10 <sup>7</sup> CART20.1/kg	phase 1	*est. enrollment: 15 *cy+flu	with 1 log dose increments	NCT03893019; recruiting; PI: Peter Borchmann		*Miltenyi biotec; Bergisch Gladbach, Germany * Universitätsklinikum Köln, Germany	
CD44v6	Multiple cancers including - but not limited to - *stomach cancer, *breast cancer, *prostate cancer	4SCAR	lentiviral	iv	10 <sup>6</sup> cells/kg	phase 1/2	*est. enrollment: 100		NCT04427449; recruiting; PI: ?		*Shenzhen Hospital of Southern Medical University *The Seventh Affiliated Hospital, Sun Yat-Sen University *Shenzhen Children's HospitalShenzhen Geno-Immune Medical Institute, China	

Antigen	Cancer	CAR type /add-ons	CAR transfer	Mode of injection	Number of cells	Phase	Patient # /pretreatment /other drugs	Outcome	NCT# /Status /PI	Ref	Origin	Adverse events
CD70	CD70-expressing cancers (e.g. *renal carcinoma; *pancreatic cancer, *breast cancer, *melanoma, *ovarian cancer)	No scFv against CD70, but CD27 (i.e. CD70 ligand) as binding moiety	retroviral	iv	MTD	phase 1/2	*est. enrollment: 113 *cy+flu *high dose IL-2 (Aldesleukin; 720,000IU/kg)		NCT02830724; recruiting; PI: James Yang	[147,150]	NCI, NIH, USA	
CD70	Renal cell carcinoma	*Allogeneic CRISPR-Cas9-engineered T cells (CTX130) *β2M knockout *TRAC knockout by insertion of CAR gene (i.e. TCR knockout and CAR expression)	CRISPR-Cas9	iv	dose escalation	phase 1	*est. enrollment: 95 *lymphodepleting chemotherapy		NCT04438083; recruiting; PI: Matthias Will		*CRISPR Therapeutics AG *Research Site 1: Melbourne, Victoria, Australia	
CD133	Relapsed and/or chemotherapy refractory advanced malinancies *liver, *pancreatic, *brain, *breast, *ovarian, *colorectal cancer, *acute myeloid and lymphoid leukemias	Comparison: *scFv-4-1BB/CD3ζ *scFv-CD3ζ	retroviral	iv	dose escalation, (3+3 approach) Mean: 1.43x10 <sup>9</sup> /kg	phase 1	*est. enrollment: 20	3/23 PR, 14/23 SD	NCT02541370; completed; PI: Han Weidong	[39,227]	Chinese PLA General Hospital; China	*CD133: an intermittent upper abdominal dull pain, chills, fever, and rapidly deteriorative grade 3 systemic subcutaneous hemorrhages and congestive rashes together with serum cytokine release  *On-target/off-tumor toxicity: liver enzymes increase (aEGFR), rash and mucositis (aCD133)
CD147 (EMMPRIN (extracellular matrix metallopro-teinase inducer), Basigin)	Recurrent malignant glioma	?	?	ic	MTD, 3 doses, 1-week intervals, 3+3	early phase 1	*est. enrollment: 31		NCT04045847; recruiting; PI: not provided		Xijing Hospital, China	
CD147 (EMMPRIN (extracellular matrix metallopro-teinase inducer), Basigin)	Very advanced HCC	?	?	iha	MTD, 3 doses, 1-week intervals	phase 1	est. enrollment: 34		NCT03993743; recruiting; PI: ?		Fourth Military Medical University; Xijing Hospital, China	
CD171 (L1CAM)	Neuroblastoma	*scFv-4-1BB/CD3ζ *scFv-CD28/4-1BB/CD3ζ *EGFRt	lentiviral	iv	1x10 <sup>6</sup> cells/kg, 5x10 <sup>6</sup> cells/kg, 1x10 <sup>7</sup> cells/kg, 5x10 <sup>7</sup> cells/kg, 1x10 <sup>8</sup> cells/kg	phase 1	*est. enrollment: 40 *lymphodepletion		NCT02311621; recruiting; PI: Julie Park	[133]	Seattle Children's Hospital, USA	
CD171 (L1CAM)	Neuroblastoma	*CE7R CAR *scFv-CD3ζ *Genetically-modified autologous CD8+ T-cell clones *HyTK	genetically modified?	iv	1x10 <sup>8</sup> -1.1x10 <sup>9</sup> /m <sup>2</sup> (split dose; 2-3 times infusions 14 days apart)	phase 1	*IL-2 *chemotherapy regimen that may consist of one of the following: cyclophosphamide and topotecan; ifosfamide, carboplatin, and etoposide; or another chemotherapy regimen	*1/6 PR and 5/6 PD 56 days after adoptive therapy *But all patients died of disease ultimately with only one achieved a relatively long survival.	NCT00006480; completed; PI: Julie Park	[211]	*Fred Hutchinson Cancer Research Center *National Cancer Institute (NCI), USA	*Grade 3 lymphopenia, neutropenia, low hemoglobinand bacteremia caused by 10 <sup>9</sup> /m <sup>2</sup> CAR-T cells *Grade 3 pneumonitis for one patient, which was associated with 10 <sup>9</sup> /m <sup>2</sup> CAR-T cells *No grade 4 or 5 adverse event was found *On-target/off-tumor toxicity: lymphopenia, neutropenia, anemia, pneumonitis
CEA	Pancreatic carcinoma with CEA+ liver metastases	CAR2 anti-CEA CAR	?	iha	*weekly 3 doses of CAR-T cells in each 28-day cycle, max 3 cycles *1x10 <sup>10</sup> cell per dose	phase 1b	*est. enrollment: 6 *low dose systemic IL-2		NCT03818165; active, not recruiting; PI: Steven C Katz		Roger Williams Medical Center, USA	
CEA	*Gastric adenocarcinoma *colorectal adenocarcinoma *lung adenocarcinoma *Solid tumors	scFv-CD28/CD3ζ	retroviral	iv	?	phase 2	*est. enrollment: 48 *IL-2		NCT01723306; suspended (funding); PI: Richard P Junghans		Roger Williams Medical Center, USA	
CEA	Adenocarcinomas	*scFv-CD3ζ *murine scFv	?	?	dose escalation	phase 1	?		NCT00004178; completed; PI: Richard P Junghans		*Beth Israel Deaconess Medical Center *Roger Williams Medical Center, USA	
CEA	Metastatic breast cancer	scFv-CD28/CD3ζ	retroviral	iv	10 <sup>9</sup> , 10 <sup>10</sup> , 10 <sup>11</sup>	phase 1	*est. enrollment: 26 *with/without IL-2 *no preconditioning		NCT00673829; suspended (funding); PI: Richard P Junghans		Roger Williams Medical Center, USA	
CEA	CEA+ liver metastases	*scFv-CD28/CD3ζ *scFv based on hMN14 (humanized) *CD8 hinge	retroviral	iha	*Inpatient dose escalation *10 <sup>8</sup> , 10 <sup>9</sup> , 10 <sup>10</sup> *Three infusions over the course of 6 weeks	phase 1	*actual enrollment: 8 *no preconditioning	*Katz et al., 2015:1/6 SD, 5/6 PD and DOD (however decrease in CEA and 4/6 had necrosis of liver lesions) *Of 6 patients 3 got dose escalation 10 <sup>8</sup> , 10 <sup>9</sup> , 10 <sup>10</sup> , without support; the other three got 3x10 <sup>10</sup> with systemic IL-2 support. *Book chapter: no systemic toxicity; minority of patients showed increased survival or decreased serum CEA	NCT01373047; completed; PI: Steven C Katz	[51-53]	Roger Williams Medical Center, USA	*Grade 3 fever and tachycardia (1 patient), associated to high-dose IL-2 administration. *Grade 1/2 transient elevations of alkaline phosphatase, total bilirubin and aspartate aminotransferase levels observed in all patients. *Mylagias, abdomnal pain, nausea, emesis, abdominal wall muscle spasm, ALT↑, AST↑, ascites, edema, thrombo-cytopenia, leukopenia, dyspnea, pleural effusion, anorexia, rash, subscapular liver hematoma,eosinophilia, chills, diarrhea, dehydration, colitis. *On-target/off-tumor toxicity: no
CEA	*Pancreatic cancer *liver metastases	?	?	iha		phase 2b	*est. enrollment: 167 *CAR-T w/ chemotherapy (gemcitabine/nab paclitaxel, NLIR+FU/FA, Capecitabine) vs. chemotherapy alone * low dose IL-2		NCT04037241; not yet recruiting; PI: not provided		Sorrento Therapeutics, Inc., USA	
CEA	Colorectal carcinoma	scFv-CD28/CD3ζ	retroviral	iv	10 <sup>9</sup> , 10 <sup>10</sup> , 10 <sup>11</sup>	phase 1	*actual enrollment: 1 *no preconditioning		NCT00673322.; terminated (this study will be incorporated into another study); PI: Richard P Junghans		Roger Williams Medical Center, USA	

Antigen	Cancer	CAR type /add-ons	CAR transfer	Mode of injection	Number of cells	Phase	Patient # /pretreatment /other drugs	Outcome	NCT# /Status /PI	Ref	Origin	Adverse events
CEA	Gastric cancer	scFv-CD28/CD3ζ	?	?	?	phase 1	actual enrollment: 0		NCT00429078; Withdrawn (low accrual); PI: Richard P Junghans		Roger Williams Medical Center, USA	
CEA	CEA-positive cancer: *lung, *colorectal, *gastric, *breast, *pancreatic cancer	*scFv-CD28/CD3ζ *scFv based on BW431/26 (humanized) *IgG4 hinge	lentiviral	iv	dose escalation, five escalating dose levels (1x10 <sup>5</sup> -1x10 <sup>6</sup> /CAR+ cells/kg), split doses (10, 30, and 60% of the total cell dose)	phase 1	*est. enrollment: 75 *cy+flu	*2/10PD, 7/10 SD, 1/10 not evaluated *Decline of serum CEA level in most patients *High dose well tolerated (no colitis, no respiratory toxicity)	NCT02349724; unknown; PI: Cheng Qian	[54]	Southwest Hospital, China	*Fever *On-target/off-tumor toxicity: no
CEA	CEA-expressing adenocarcinoma peritoneal metastases or malignant ascites: *colorectal, *gastric, *breast, *pancreas	?	?	ip	MTD, dose escalation one dose per patient	phase 1	est. enrollment: 18		NCT03682744; active, not recruiting; PI: Steven Katz		Roger WilliamsMedical Center, USA	
CEA	Liver metastases	scFv-CD28/CD3ζ	retroviral	iha in combination with Sir-spheres (SIRT)	fixed dose; 3 infusions over 6 weeks	phase 1b	*actual enrollment: 8 *no lymphodepletion *low dose IL-2	*Well tolerated *Biologic responses were demonstrated *AACR 2017: 3/6 SD, median OS 6.9 months, 1 metabolic CR	NCT02416466; completed; PI: Steven Katz	[55,56]	Roger Williams Medical Center, USA	On-target/off-tumor toxicity: no
CEA	*CEA-expressing liver metastases *Pancreas cancer	?	?	iha or pv	*Fixed dose *3 doses per patient with 1 week intervals	phase 1b	*actual enrollment: 5 *low dose IL-2	*n=5 (4 pancreatic cancer). 2 with no viable liver metastases by PET scan *Median OS post-treatment 8.3 months	NCT02850536; active, not recruiting; PI: Steven Katz and Richard Schulick	[57]	*Roger WilliamsMedical Center *University of Colorado, Denver, USA	
CEA	r/r CEA+ cancer: *solid tumor, *lung, *colorectal, *liver, *pancreatic, *gastric, *breast	?	?	iv	1-3 times	phase 1/2	est. enrollment: 40		NCT04348643 recruiting PI: Zhi Yang and Yingzi Zhang		Chongqing Precision Biotech Co., China	
CEA	*Breast, *colorectal, *gastric, *lung, *ovarian, *pancreatic cancer, *unspecified adult solid tumor	*scFv-CD3ζ *scFv based on MFE23 (murine)	retroviral	iv	dose escalation 1x10 <sup>5</sup> -5x10 <sup>10</sup>	phase 1	*actual enrollment: 14 *Cohort 1-3: only flu *Cohort 4: cy+flu *Aldesleukin (IL-2)	*7/14 SD, 7/14 PD *Transient reduction in serum CEA in cohort 4, no colitis, transient, acute respiratory toxicity	NCT01212887; Terminated (due to safety concerns and lack of efficacy); PI: Robert E. Hawkins, MD	[58]	*Cancer Research UK *Christie Hospital Manchester, England, United Kingdom	*Pelvic pain, neutropaenia, general deterioration, hypocalcaemia, leukopenia, hypophosphataemia, lymphopenia, left side pain, abdominal pain, anaemia, thrombocytopenia, vomiting, hypotension, hyperbilirubinaemia, hyoalbuminaemia, epistaxis, hyponatraemia, intermittent pyrexia, haematemesis, jaundice, neutropenic sepsis, intermittent anaemia, intermittent increased respiratory rate *On-target/off-tumor toxicity: transient acute respiratory toxicity
claudin 18.2	Gastric cancer	LCAR-C18S cells	?	infusion?	*MTD/ RP2D regimen finding *single dose	phase 1	*est. enrollment: 34 *cy+flu		NCT04467853; not yet recruiting; PI: Jin Li		*Shanghai East Hospital *Nanjing Legend Biotech Co., China	
claudin 18.2	*Advanced gastric cancer *Pancreatic ductal adenocarcinoma	LCAR-C182A	?	iv	?	phase 1	*est. enrollment: 18 *cy+flu		NCT03890198; recruiting; PI: Enxiao Li		First Affiliated Hospital Xi'an Jiaotong University, China	
claudin 18.2 (CLD18)	*Advanced gastric adenocarcinoma *Pancreatic adenocarcinoma	scFv-CD28/CD3ζ	lentiviral	iv	dose escalation, multiple infusions	phase 1	*est. enrollment: 24 *Lymphodepletion	1/12 CR, 3/12 PR, 5/12 SD	NCT03159819; recruiting; PI: Xianbao Zhan	[228]	Shanghai hospital, China	
claudin 18.2	Advanced solid tumors; claudin 18.2 positive	humanized CAR	?	?	MTD	phase 1	*est. enrollment: 15 *cy+flu		NCT03874897; recruiting; PI: Lin Shen		Beijing Cancer Hospital, China	
claudin 18.2	*Gastric adenocarcinoma *Pancreatic adenocarcinoma	CT041	?	?	Part A: dose escalation (3+3) Part B: expansion cohort	phase 1b	*est. enrollment: 30 *Preconditioning		NCT04404595; not yet recruiting; PI: ?		Carsgen Therapeutics, Ltd., USA	
Ligand(s) of chlorotoxin	*Recurrent glioblastoma *Recurrent malignant glioma *Recurrent WHO grade II glioma *Recurrent WHO grade III glioma	*Chlorotoxin (EQ)-CD28/CD3ζ (no scFv, peptide-bearing CAR, with chlorotoxin peptide extracellularly) *CD19t	?	infusion?	Patients receive CAR-T lymphocytes via dual delivery starting on day 0 for 3 weekly cycles over 21 days. Each treatment cycle begins with one or two CAR-T cell infusions (one at each catheter site) and lasts for 1 week. Treatment continues in the absence of disease progression or unacceptable toxicity.	phase 1	est. enrollment: 36		NCT04214392; recruiting; PI: Behnam Badie	[147]	*City of Hope Medical Center; *National Cancer Institute (NCI), USA	
c-Met/hepatocyte growth factor receptor	*Metastatic breast cancer *TNBC	*scFv-4-1BB/CD3ζ *scFv based on Onartuzumab	mRNA-transfection	it (cutaneous or lymph node mets)	1x 3x10 <sup>7</sup> or 1x 3x10 <sup>8</sup>	phase 1	*n=6 (3 each cohort) *no pretreatment	*mRNA c-Met-CAR-T cell injections were well tolerated *No drug-related adverse effects greater than grade 1 *Extensive tumor necrosis at injection site *Loss of c-Met immunoreactivity *Surrounded by macrophages at the leading edges and within necrotic zones *2/6 PD, 1/6 SD, 3/6 died	NCT01837602; completed; PI: Tchou	[222]	Upenn, USA	*No side effects *On-target/off-tumor toxicity: no

Antigen	Cancer	CAR type /add-ons	CAR transfer	Mode of injection	Number of cells	Phase	Patient # /pretreatment /other drugs	Outcome	NCT# /Status /PI	Ref	Origin	Adverse events
c-Met/hepatocyte growth factor receptor	*Advanced breast carcinoma *Advanced melanoma	scFv-4-1BB/CD3ζ	mRNA-transfection	iv	*Up to 6 doses over a 2 week period *Each dose is 1x10 <sup>8</sup> cells	early phase 1	*est. enrollment: 10 patients *no lymphodepletion		NCT03060356; terminated (halt in funding); PI: Mitchell		Upenn, USA	
DLL3 (delta-like protein 3)	Relapsed/refractory small cell lung cancer (SCLC)	AMG 119	?	iv	single dose	phase 1	est. enrollment: 41		NCT03392064; active, not recruiting; PI: MD Amgen		Amgen, USA	
EGFR	*Non-small cell lung cancer, *colorectal cancer with liver metastasis *Chemotherapy resistant or relapsed: *ovary cancer, *lung cancer, *cholangiocarcinoma, *gall bladder carcinoma, *pancreatic cancer, *renal carcinoma and *other relapsed/ metastatic/ unresectable tumors	*scFv-4-1BB/CD3ζ *scFv based on E10	lentiviral	iv	*1 to 3 cycles of CAR-T-EGFR *Median CAR-T cell dose 2.65x10 <sup>9</sup> /kg in Guo *Median CAR-T cell dose 0.97x10 <sup>7</sup> /kg in Feng *Dose escalation over several days	phase 1/2	*est. enrollment: 60 *nabpaclitaxel (100-250 mg/m2) and cyclophosphamide (15-35 mg/kg)  *Feng et al. 2016, only NSCLC: 2/11PR, 5/11SD, 4/11PD *Guo et al. 2018, only advanced biliary tract cancers (14 cholangiocarcinomas and 5 gallbladder carcinomas): *1/17 CR, 10/17 SD *The median progression-free survival was 4 months.		NCT01869166; status unknown; PI: Weidong Han	[37-39]	Chinese PLA General Hospital, China	*Feng et al., 2016: Mild skin toxicity, nausea, vomiting, dyspnea, andhypotension; one patient suffered from a transient grade 3/4 increase in serum lipase. *On-target/off-tumor toxicity: serum lipase increase *Feng et al., 2017: EGFR: mild chills, fever, fatigue, vomiting and muscle soreness, and a 9-day duration of delayed lower fever, accompanied by escalation of IL-6 and CRP, acute increase of glutamic-pyruvic transaminase and glutamic-oxalacetic transaminase, and grade 2 lichenstriatus-like skin pathological changes. *Guo et al., 2018: *infusion was tolerated;grade≥3 lymphopenia (10 of 19); grade≥3 thrombocytopenia (2 of 19); 3 patients grade>=3 acute fever/chill *grade 1/2 target-mediated toxicities (mucosal/cutaneous toxicities and acute pulmonary edema (increase of IL-6 and CRP))
EGFR	NSCLC	*CXCR5-modified *Autologous T cells	?	iv	The first dose group: 0.5 × 10 <sup>9</sup> /kg CAR positive T cells; the second dose group: 1.58 × 10 <sup>9</sup> /kg CAR positive T cells; the third dose group: 5 × 10 <sup>9</sup> /kg CAR positive T cells. For subjects with body weight greater than 60 kg, the number of cells can only be calculated according to 60 kg of body weight.	phase 1	est. enrollment: 11		NCT04153799; recruiting; PI: Li Zhang	[40]	*Sun Yat-sen UniversityGuangzhou *Bio-gene Technology Co., Ltd., China	
EGFR	EGFR-family-member-positive, advanced solid tumor: *lung, *liver, *stomach	*HerinCAR-PD1 *PD-1 antibody expressing CAR-T	?	iv	3 cycles 1-5x10 <sup>7</sup> /kg	phase 1/2	*est. enrollment: 20		NCT02862028; unknown; PI: Naiyan Han		shanghai international medical center, China	
EGFR	Metastatic colorectal cancer	*4th generation (TRUCK) *scFv-4-1BB/CD28/CD3ζ *IL-12 expression under control of NFAT	?	?	MTD determination	phase 1/2	est. enrollment: 20		NCT03542799; not yet recruiting; PI: Geng Tian		Shenzhen second people's hospital, China	
EGFR	Malignant gliomas	?	lentiviral	iv	?	phase 1	*est. enrollment: 10 *Aldesleukin *non-myeoablative conditioning (cy+flu)		NCT02331693; unknown; PI: not provided		Renji Hospital, China	
EGFR	Metastatic colorectal cancer	scFv-4-1BB/CD28/CD3ζ	?	?	MTD determination	phase 1/2	est. enrollment: 20		NCT03152435; unknown; PI: Geng Tian		Shenzhen second people's hospital, China	
EGFRvIII	Malignant glioma	scFv-CD28/4-1BB/CD3ζ	retroviral	iv	Phase 1: dose escalation until MTD (maximum tolerated dose) determined, then phase 2	phase 1/2	*est. enrollment: 107 *actual enrollement: 18 *non-myoablative, but lymphodepleting conditioning regimen(cy+flu) *with aldesleukin (IL-2; also iv, 72,000IU/kg)	*Combined steroids/ no steroids, Cohort 8: participant experienced a treatment-related mortality (TRM). *many events	NCT01454596; completed; PI: SA Rosenberg	[45,229,230]	NCI, NIH, USA	On-target/off-tumor toxicity: ARDS (one treatment-related death)
EGFRvIII	Glioblastoma	*scFv-CD8hinge/tm-4-1BB/CD3ζ *scFv based on 3C10, humanized	lentiviral	iv	1-5x10 <sup>8</sup>	phase 1	*est. enrollment: 12 *Temozolomide, radiation	*Manufacturing and infusion are feasible and safe *no off-tumor toxicity, no CRS *O'Rourke et al.: 2/10PD, 1/10SD, 7/10 died	NCT02209376; Terminated (Sponsor decision to terminate prior to completion to pursue combination therapies. NCT03726515); PI: Donald O'Rourke, Susan Chang	[231-234]	*Upenn *University of California, San Francisco, USA	*Seizure, headache, weakness,cerebral edema *On-target/off-tumor toxicity: no
EGFRvIII	Recurrent glioblastoma multiforme	?	lentiviral	iv	*3+3 dose escalation *5x10 <sup>4</sup> /kg-1x10 <sup>7</sup> /kg	phase 1	*est. enrollment: 20 *cy+flu		NCT02844062; unknown; PI: Zhixiong Lin		Sanbo Brain Hospital capital medical university, China	
EGFR family member	Advanced solid tumors	*herinCAR-PD1 cells *PD-1 antibody expressing	?	iv	1-5x10 <sup>7</sup> /kg herin CAR-PD1 + physiological saline + 0.25% human alloalbumin (300ml)	phase 1/2	*est. enrollment: 20		NCT02873390; unknown; PI: Jiangtao Wang		Ningo No.5 Hospital, China	
EGFRvIII	Newly-diagnosed WHO grade IV malignant glioma	?	retroviral	iv	single infusion, MTD 4.5x10 <sup>6</sup> /kg 1.5x10 <sup>7</sup> /kg 4.5x10 <sup>7</sup> /kg 1.5x10 <sup>8</sup> /kg	phase 1	*actual enrollment: 3 *lymphodepletion with temozolomide		NCT02664363; Terminated (Study funding ended); PI: David Ashley, Daniel Landi	[203]	Duke University Hospital, USA	
EGFR	EGFR-positive advanced solid tumors	CTLA-4 and PD-1 antibodies expressing	?	iv	2-5x10 <sup>7</sup> cells/kg	phase 1/2	*est. enrollment: 40 *cyclophosphamide		NCT03182816; unknown; PI: Jiangtao Wang		Ningbo No.5 Hospital, China	

Antigen	Cancer	CAR type /add-ons	CAR transfer	Mode of injection	Number of cells	Phase	Patient # /pretreatment /other drugs	Outcome	NCT# /Status /PI	Ref	Origin	Adverse events
EGFR	Recurrent/refractory solid tumors in children and young adults: *germ cell tumor, *retinoblastoma, *hepatoblastoma, *wilms tumor, *rhabdoid tumor, *carcinoma, *osteosarcoma, *ewing sarcoma, *rhabdomyosarcoma, *synovial sarcoma, *clear cell sarcoma, *malignant peripheral nerve sheath tumors, *desmoplastic small round cell tumor, *soft tissue sarcoma, *neuroblastoma	*scFv-4-1BB/CD3ζ *In second arm also CD19 CAR-T (there with HER2tG selection marker) *Selection suicide marker EGFRt	lentiviral	?	?	phase 1	est. enrollment: 36		NCT03618381; recruiting; PI: Katie Albert	[41]	Seattle Children's Hospital, USA	
EGFRvIII	Glioblastoma multiforme	*4SCAR-IgT cells *Secreting PD1 and PD-L1 antibodies	?	iv or it	*3+3 dose escalation *1x10 <sup>6</sup> /kg-1x10 <sup>7</sup> /kg	phase 1	*est. enrollment: 20 *cy+flu		NCT03170141; enrolling by invitation; PI: Lung-Ji Chang		Shenzhen Geno-Immune Medical Institute, China	
EGFRvIII	GBM	*scFv-4-1BB/CD3ζ *scFv based on 3C10, humanized	?	?	?	phase 1	*est. enrollment: 7 *Pembro		NCT03726515; Active, not recruiting; PI: Donald O'Rourke		Abramson Cancer Center of the Upenn, USA
