Supplementary Figures

Figure S1. Nucleolin mRNA expression at different tumor stages of lung adenocarcinoma and squamous carcinoma. TCGA's lung adenocarcinomas and squamous carcinomas (PanCancer Atlas datasets, $n = 566$ and 487, respectively) were analyzed. Cases were selected according to completeness of available information. Representation of nucleolin mRNA expression levels (RNA-Seq by Expectation-Maximization–RSEM) (**A**) by lung adenocarcinomas or squamous carcinomas, (**B**) further stratified according to the pathological staging. Bars represent mean expression. Dots represent individual values ([****] $p < 0.0001$ calculated by Mann-Whitney test; [**] $p < 0.01$, [n.s.] $p > 0.05$ calculated by Kruskal-Wallis test).
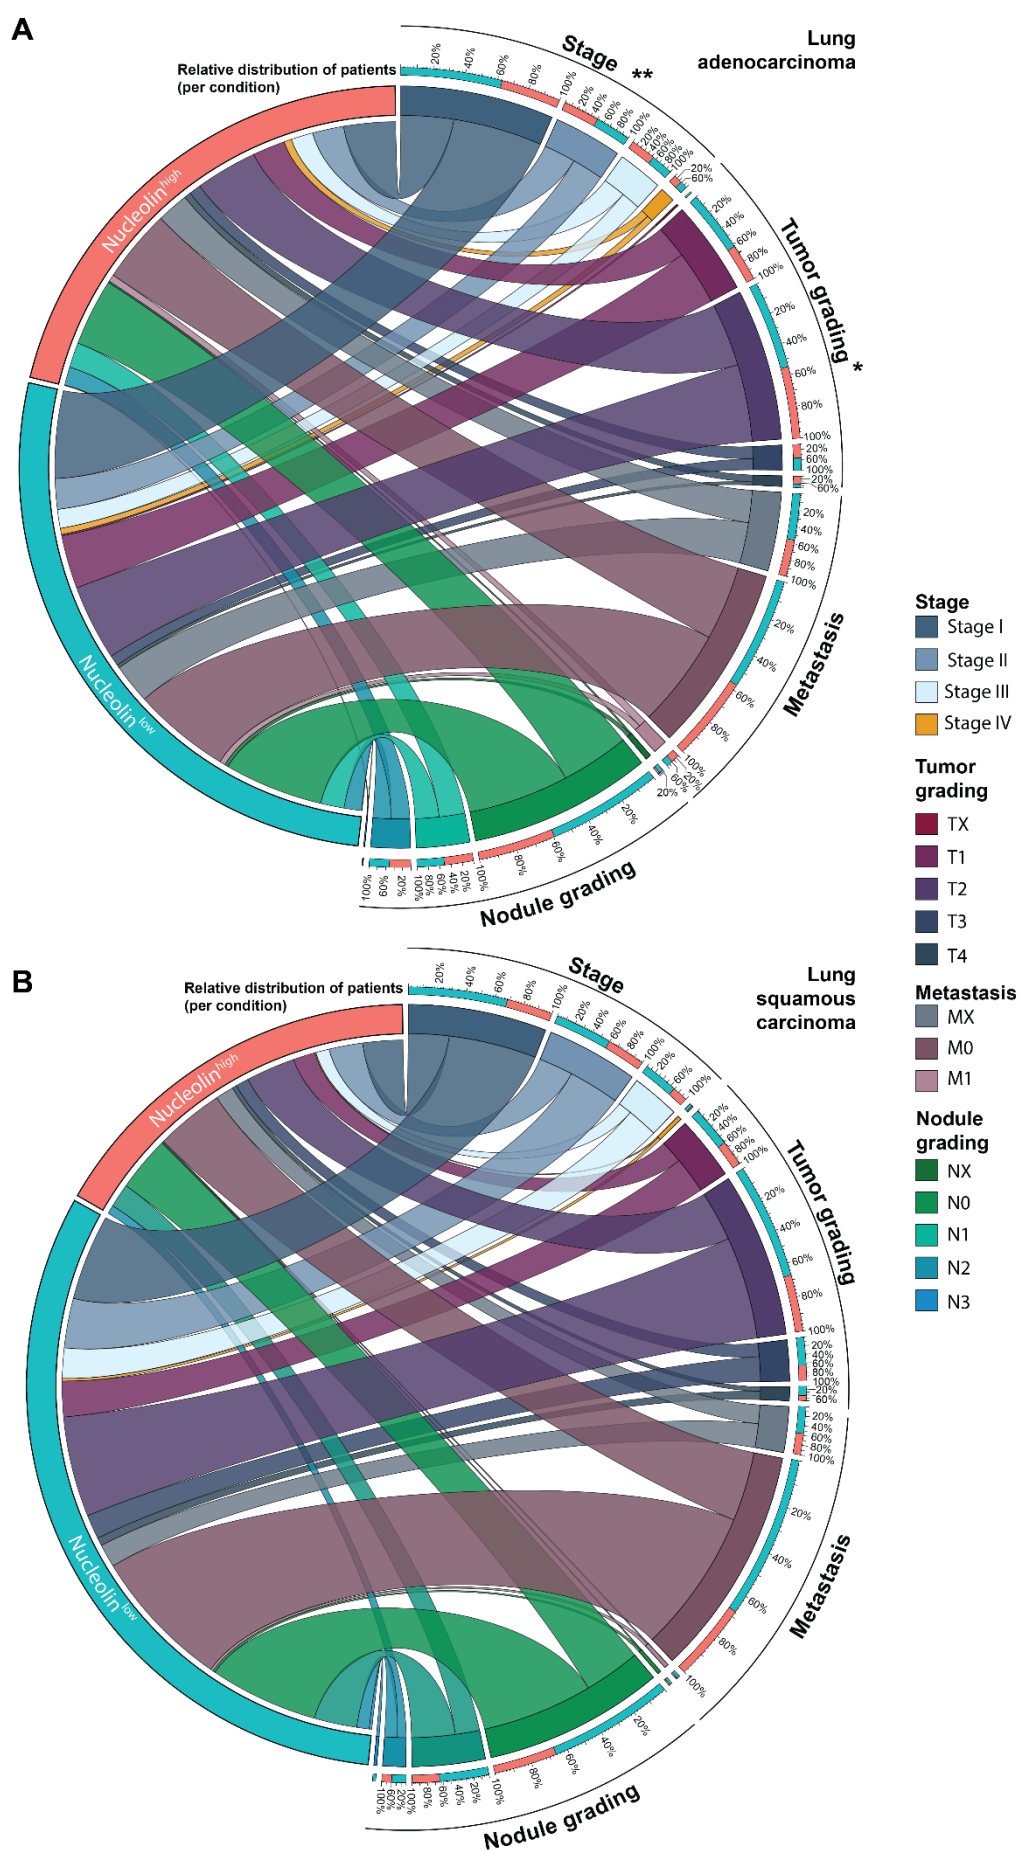

Figure S2. TCGA's lung adenocarcinomas and squamous carcinomas (PanCancer Atlas datasets, $n = 566$ and 487, respectively) were analyzed. **(A)** Lung adenocarcinoma and **(B)** squamous carcinoma grading characterization according to nucleolin expression levels ([**] $p < 0.01$, [*] $p < 0.05$, calculated by χ^2 test).

Figure S3. Whole western blots. Representative membranes stained with GAPDH (37 kDa); lamin B1 (68 kDa) or nucleolin (100 kDa).

Supplementary Tables

Table S1. Estimated median time-to-event for the lung adenocarcinoma (n=501) and squamous carcinoma (n=479) data sets from the TCGA

Disease	Parameter	Stage stratification	Nucleolin^{low}			Nucleolin^{high}		
			Median (months)	95% Confidence Interval		Median (months)	95% Confidence Interval	
				Lower	Upper		Lower	Upper
Lung Adenocarcinoma	Overall Survival	Whole Cohort	54.3	49.1	110.5	39.9	31.3	50.2
		Stage I	110.5	54.3	NA	56.7	42.3	NA
		Stage ≥ II	34.4	30.3	49.1	18.87	8.02	NA
	Progression-free survival	Whole Cohort	45.3	35.6	62.2	23.9	15.5	34.4

		Stage I	69.7	57.7	84.3	54.6	41.7	71.5
		Stage ≥ II	63.2	49.1	81.3	45.1	35.7	56.9

Table S3. Global score of nucleolin immunoreactivity in different histologically classified human pulmonary carcinomas and adjacent non-malignant lung tissues (*n* = 58).

Cell type	Nucleolin immunoreactivity	Histological type				
		Adenocarcinoma	Squamous cell carcinoma	Adenosquamous carcinoma	Pleomorphic carcinoma	Total
		Frequency of nucleolin expression (N, %)				
Cancer cells	Low/ Negative	0 (0.0)	0 (0.0)	1 (12.5)	0 (0.0)	1 (1.7)
	Weak	0 (0.0)	1 (8.3)	1 (12.5)	0 (0.0)	2 (3.4)
	Moderate	0 (0.0)	3 (25.0)	0 (0.0)	0 (0.0)	3 (5.2)
	High	28 (100.0)	8 (66.6)	6 (75.0)	10 (100.0)	52 (89.7)
	Extra-nuclear	9 (32.1)	4 (33.3)	2 (25.0)	4 (40.0)	19 (32.6)
Tumour stroma	Low/ Negative	1 (3.6)	0 (0.0)	1 (12.5)	0 (0.0)	2 (3.4)
	Weak	9 (32.1)	3 (25.0)	2 (25.0)	2 (20.0)	16 (27.6)
	Moderate	3 (10.7)	6 (50.0)	2 (25.0)	1 (10.0)	12 (20.7)
	High	15 (53.6)	3 (25.0)	3 (37.5)	7 (70.0)	28 (48.3)
Normal Lung Epithelium (Basal cells)	Low/ Negative	2 (8.0)	1 (12.5)	3 (42.9)	3 (50.0)	9 (19.6)
	Weak	3 (12.0)	2 (25.0)	0 (0.0)	0 (0.0)	5 (10.9)
	Moderate	2 (8.0)	1 (12.5)	1 (14.3)	0 (0.0)	4 (8.7)
	High	18 (72.0)	4 (50.0)	3 (42.9)	3 (50.0)	28 (60.9)
	n/a *	3	4	1	4	
Alveoli (Alveolar type II pneumocytes)	Low/ Negative	11 (44.0)	5 (55.5)	3 (42.9)	3 (33.3)	22 (44.0)
	Weak	1 (4.0)	1 (11.1)	0 (0.0)	2 (22.2)	4 (8.0)
	Moderate	4 (16.0)	2 (22.2)	3 (42.9)	3 (33.3)	12 (24.0)
	High	9 (36.0)	1 (11.1)	1 (14.3)	1 (11.1)	12 (24.0)
	n/a*	3	3	1	1	

* n/a: not applicable = either basal cells or type II pneumocytes were not present in the analyzed patient-derived adjacent non-malignant tissue of tumour slices.

Table S4. Global score of nucleolin immunoreactivity in tumor stromas of AD (*n* = 28), SQ (*n* = 12), ADSQ (*n* = 8) and PM (*n* = 10) human pulmonary carcinomas

Tumor Stroma		Frequency of Nucleolin Expression (*N*, %)			
Histological type	Cell type (%#)	Negative	Weak	Moderate	High
AD	TEC* (100)	0 (0.0)	12 (42.9)	15 (53.6)	1 (3.6)
	TIL** (100)	2 (7.1)	7 (25.0)	16 (57.1)	3 (10.7)
	CAF*** (78.6)	7 (25.0)	9 (32.1)	6 (21.4)	0 (0.0)
SQ	TEC (100)	2 (16.7)	4 (33.3)	3 (25.0)	3 (25.0)
	TIL (100)	4 (33.3)	5 (41.7)	0 (0.0)	3 (25.0)
	CAF (75.0)	3 (25.0)	2 (16.7)	2 (16.7)	2 (16.7)
ADSQ	TEC (87.5)	0 (0.0)	5 (62.5)	2 (25.0)	0 (0.0)
	TIL (62.5)	0 (0.0)	2 (25.0)	1 (12.5)	2 (25.0)
	CAF (62.5)	0 (0.0)	2 (25.0)	2 (25.0)	1 (12.5)
PM	TEC (100)	0 (0.0)	8 (80.0)	2 (20.0)	0 (0.0)
	TIL (90.0)	0 (0.0)	4 (40.0)	3 (30.0)	2 (20.0)
	CAF (80.0)	1 (10.0)	2 (20.0)	4 (40.0)	1 (10.0)

* Tumor Endothelial Cells; ** Tumor Infiltrating Lymphocytes; *** Cancer-Associated Fusiform cells/ Fibroblasts; # Percentage of cell type in the analyzed patient-derived tumor slices, for each sub-type.

Table S5. Cytotoxicity of different formulations of liposomal doxorubicin against lung cancer cells.

	Compounds	1 h		4 h		24 h	
		IC$_{50}$ (μM)	IC$_{90}$ (μM)	IC$_{50}$ (μM)	IC$_{90}$ (μM)	IC$_{50}$ (μM)	IC$_{90}$ (μM)
