

Figure S1. Monthly rainfall, crop duration, and harvesting periods during the experimental period at the Lyamungo research site located on the southeast slopes of Mount Kilimanjaro. CD refers to the crop duration of both cycles one and two; FPC1 flowering period cycle one; HPC1 harvesting period cycle one; HPC2 harvesting period cycle two.

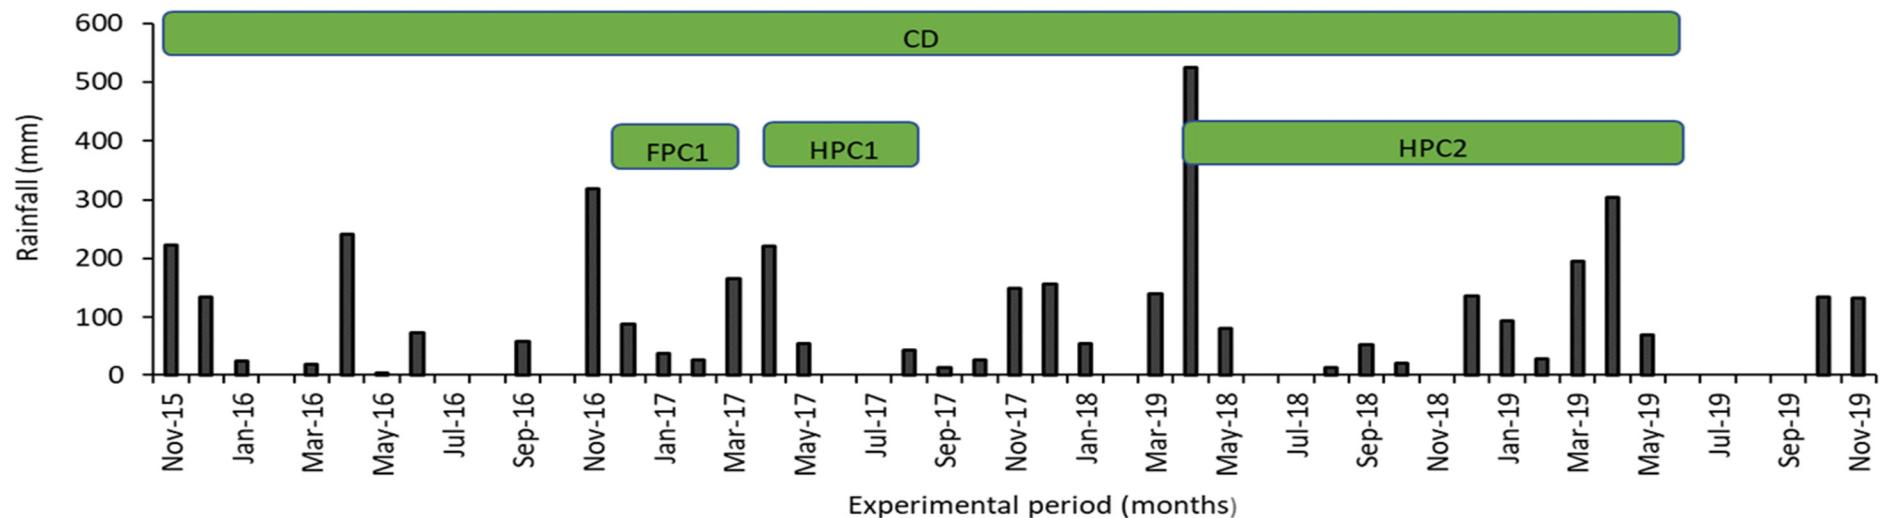

Figure S2. Monthly rainfall, crop duration, and harvesting periods during the experimental period at the Tarakea research site located on the northeast slopes of Mount Kilimanjaro. CD refers to the crop duration of both cycles one and two; FPC1 flowering period cycle one; HPC1 harvesting period cycle one; HPC2 harvesting period cycle two.

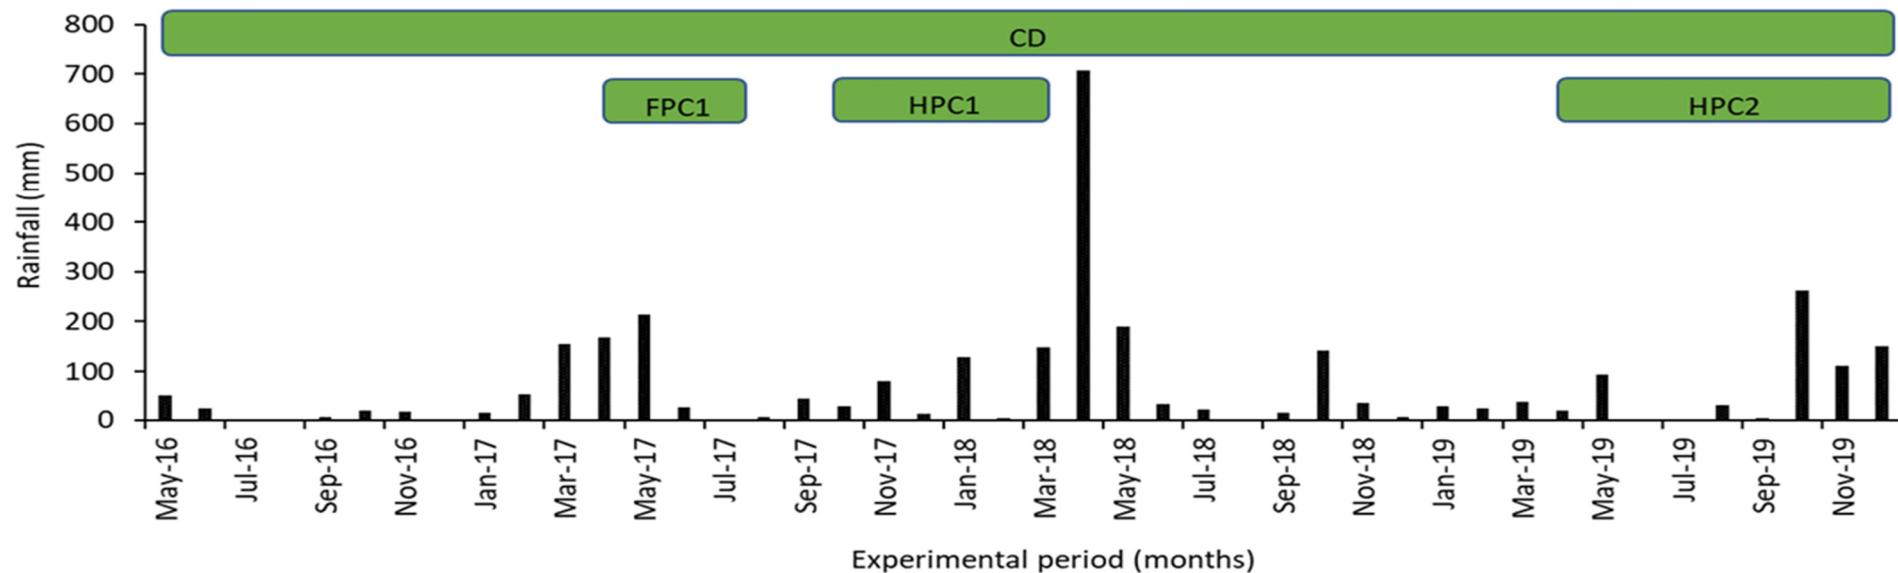

Figure S3. Monthly rainfall, crop duration, and harvesting periods during the experimental period at the Tengeru research site located on the southeast slopes of Mount Meru. CD refers to the crop duration of both cycles one and two; FPC1 flowering period cycle one; HPC1 harvesting period cycle one; HPC2 harvesting period cycle two.

Table S1. Common bean haulms produced in situ in the banana-bean intercrop treatment plots in each site and nutrients supplied by the haulms ($\text{kg ha}^{-1} \text{ year}^{-1}$).

Experimental sites	Common bean haulms yield ($\text{kg ha}^{-1} \text{ year}^{-1}$)	Nutrients supplied by common bean haulms ($\text{kg ha}^{-1} \text{ year}^{-1}$)		
		N	P	K
Tarakea	1,666.0	52.0	5.0	40.0
Lyamungo	1,832.0	57.0	5.5	44.0
Tengeru	1,499.0	46.7	4.5	36.0
Average	1,666.0	51.9	5.0	40.0

Key: Urea—46 % N, MOP—60 % K₂O, TSP—46 % P₂O₅.

Table S2. Fertilization treatments, nutrient sources, and application rates used in the field experiments.

Fertilization treatments	Cattle manure & haulms (kg ha ⁻¹ year ⁻¹)		Nutrients supplied by manure & haulms (kg ha ⁻¹ year ⁻¹)			Nutrients supplied by mineral fertilizer (kg ha ⁻¹ year ⁻¹)		
	Manure	Haulms	N	P	K	N	P (P ₂ O ₅)	K (K ₂ O)
T1—no N (control)	0.0	0.0	0.0	0.0	0.0	0.0	33.5 (76.7)	459.8 (556.4)
