**Supplementary Figure S1.** IHC of Ki-67 from the tumors formed by Panc 02 cells alone (designated as “Panc 02” group) or Panc 02 cells mixed with PBS-, LPS-, or rHSP90 $\alpha$ -treated RAW264.7 cells (designated as “Panc 02 + RAW264.7”, “Panc 02 + LPS-treated RAW264.7”, and “Panc 02 + rHSP90 $\alpha$ -treated RAW264.7” groups, respectively). Despite the tumor growth of “Panc 02” or “Panc 02 + LPS-treated RAW264.7” grafts was much slower than that of “Panc 02 + rHSP90 $\alpha$ -treated RAW264.7” grafts, it was noted that abundant Ki-67-positive cells could also be observed from the small tumor tissues of “Panc 02” and “Panc 02 + LPS-treated RAW264.7” groups. Anti-Ki-67 antibody was purchased from Thermo Fisher Scientific (1:200, cat. #RM-9106-S). H/E, Hematoxylin and Eosin staining.
