

Supplementary Figure 1

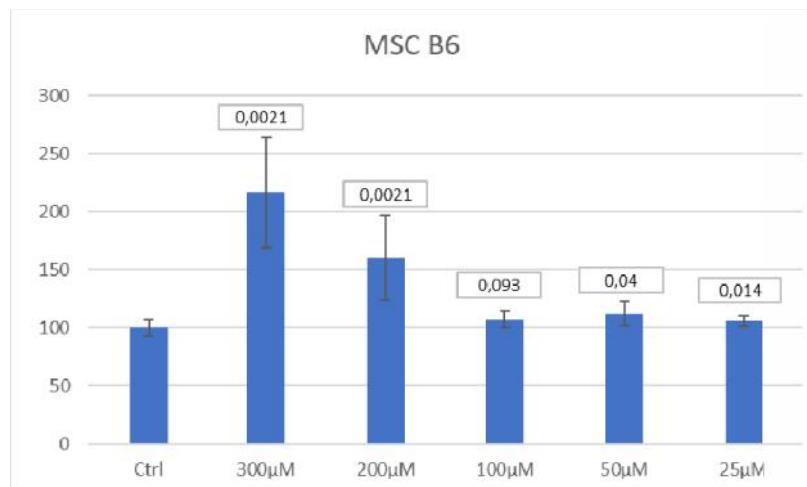

Figure 1A: XTT analysis of vitamin B6 concentration toxicity in MSC model. . P-values calculated using a Wilcox non parametric test are reported above each concentration obtained from the comparison versus the control.

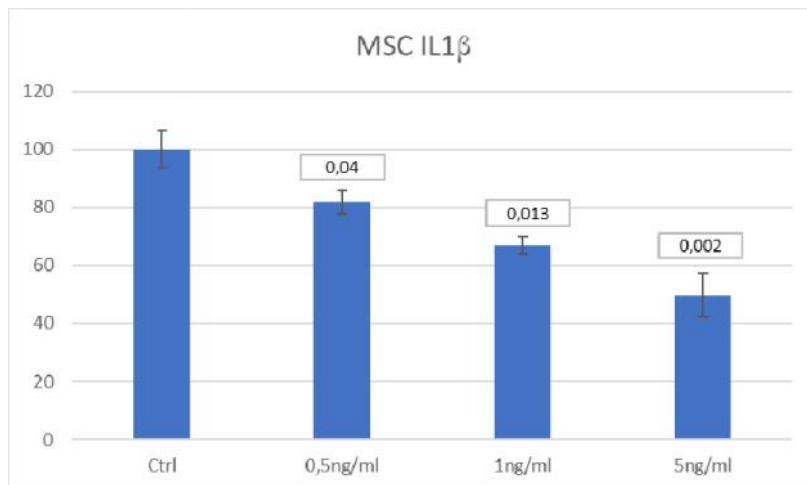

Figure 1B: XTT analysis of IL1 β concentration toxicity in MSC model. P-values calculated using a Wilcox non parametric test are reported above each concentration obtained from the comparison versus the control.

Supplementary Figure 2

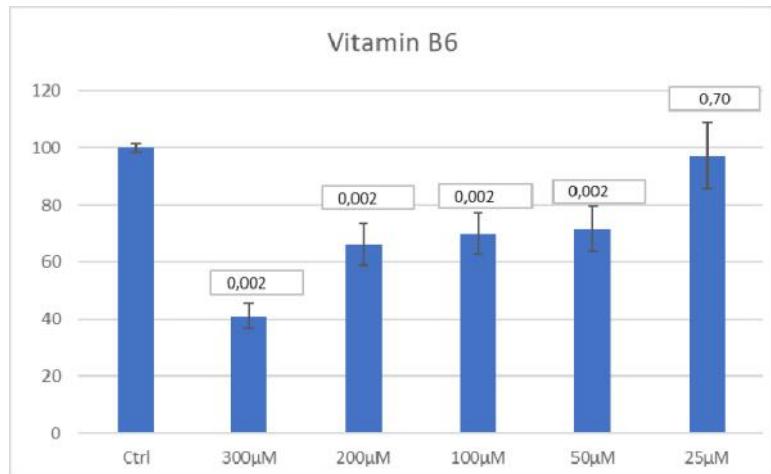

Figure 2A: XTT analysis of vitamin B6 concentration toxicity in chondrosarcoma model. P-values calculated using a Wilcoxon non parametric test are reported above each concentration obtained from the comparison versus the control.

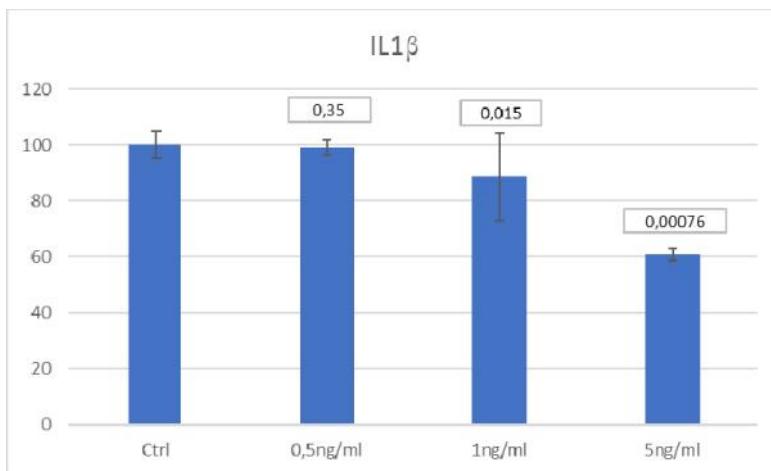

Figure 2B: XTT analysis of IL1 β concentration toxicity in chondrosarcoma model. P-values calculated using a Wilcoxon non parametric test are reported above each concentration obtained from the comparison versus the control.

Supplementary Table 1: t-test analysis of t-test analysis of modulated metabolites PRE and POST HM. In teable are reported only the 100 modulated features, among 726 identified and reported in the cloud plot.
