

Figure S1. Length distribution of all assembled unigenes.

Table S1. Sequencing production statistics.

Samples	Total Raw Reads	Total Clean Reads	GC percentage
Shoot	118059830	115777772	45.01%
Root	119410188	117031190	46.26%

Table S2. Summary of sequence annotation.

Database	NR	NT	Swiss-Prot	KEGG	COG	GO	All
Numbers	57695	60628	39893	35136	24608	53435	63396
Percentage	80.01%	84.11%	55.34%	48.74%	34.14%	74.13%	87.94%

Table S3. Differentially expressed genes (DEGs) related to ion transport in roots of *P. cornutum* after 50 mM NaCl treatment for 6 h. C6R RPKM and S6R RPKM indicates the RPKM value of a gene in roots under control condition for 6 h and salt treatment for 6 h respectively. Fold change equals to $\log_2(S6R \text{ RPKM} / C6R \text{ RPKM})$ and indicates the transcript abundance change of each DEGs. Protein is the protein encoded by each DEGs. The Gene ID of each upregulated DEGs with no expression under control condition is in bold.

Table S6. Differentially expressed genes (DEGs) related to ion transport in shoots of *P. cornutum* after 50 mM NaCl treatment for 24 h. C24S RPKM and S24S RPKM indicates the RPKM value of a gene in shoots under control condition for 24 h and salt treatment for 24 h respectively. Fold change equals to log₂(S24S RPKM / C24S RPKM) and indicates the transcript abundance change of each DEGs. Protein is the protein encoded by each DEGs. The Gene ID of each upregulated DEGs with no expression under control condition is in bold.

Table S11. Differentially expressed genes (DEGs) related to photosynthesis in shoots of *P. cornutum* after 50 mM NaCl treatment for 6 h. C6S RPKM and S6S RPKM indicates the RPKM value of a gene in shoots under control condition for 6 h and salt treatment for 6 h respectively. Fold change equals to $\log_2(S6S \text{ RPKM} / C6S \text{ RPKM})$ and indicates the transcript abundance change of each DEGs. Protein is the protein encoded by each DEGs. The Gene ID of each upregulated DEGs with no expression under control condition is in bold.

7 **Table S14.** Differentially expressed genes (DEGs) related to transcript factors in shoots of *P. cornutum*
8 after 50 mM NaCl treatment for 6 h. C6S RPKM and S6S RPKM indicates the RPKM value of a gene
9 in shoots under control condition for 6 h and salt treatment for 6 h respectively. Fold change equals
10 to $\log_2(S6S \text{ RPKM} / C6S \text{ RPKM})$ and indicates the transcript abundance change of each DEGs. Protein
11 is the protein encoded by each DEGs. The Gene ID of each upregulated DEGs with no expression
12 under control condition is in bold.

Gene ID	C6S RPKM	S6S RPKM	Log ₂ Ratio	Protein	Most homologous species
