3.	References	13

1. Supplementary Figures

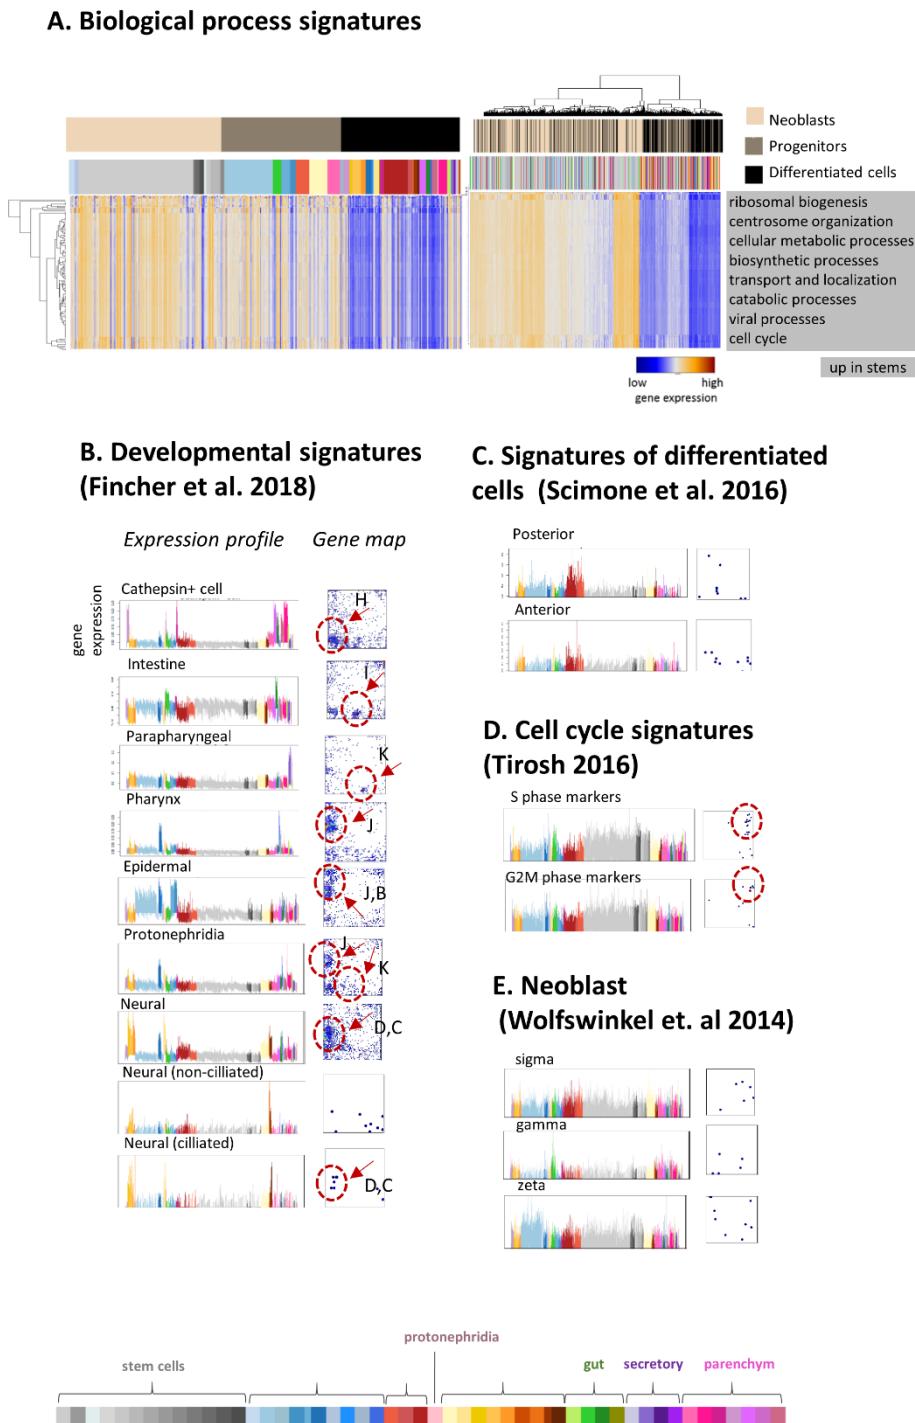

Figure S 1: Cellular markers and previous signatures of planarian single cell transcriptome: (A) Gene expression heatmap of signatures of the Gene Ontology (GO) - term biological processes related to processes like translation and biosynthesis show high expression in neoblasts as well as progenitor cells. GO information is taken from the planMine.de database . (B) Expression profiles and gene maps of cell type specific sets of genes taken from [1]. (C) Profiles and maps of several differentially expressed genes in posterior and anterior muscle cells that were identified by [2]. (D) Established cell cycle state markers from [3]. (E) Markers for previously characterized neoblast classes, σ -neoblasts (intestine progenitors), ζ -neoblasts (epidermal progenitors) and γ -neoblasts (nephridial, muscular, cns and eye progenitors) [4].

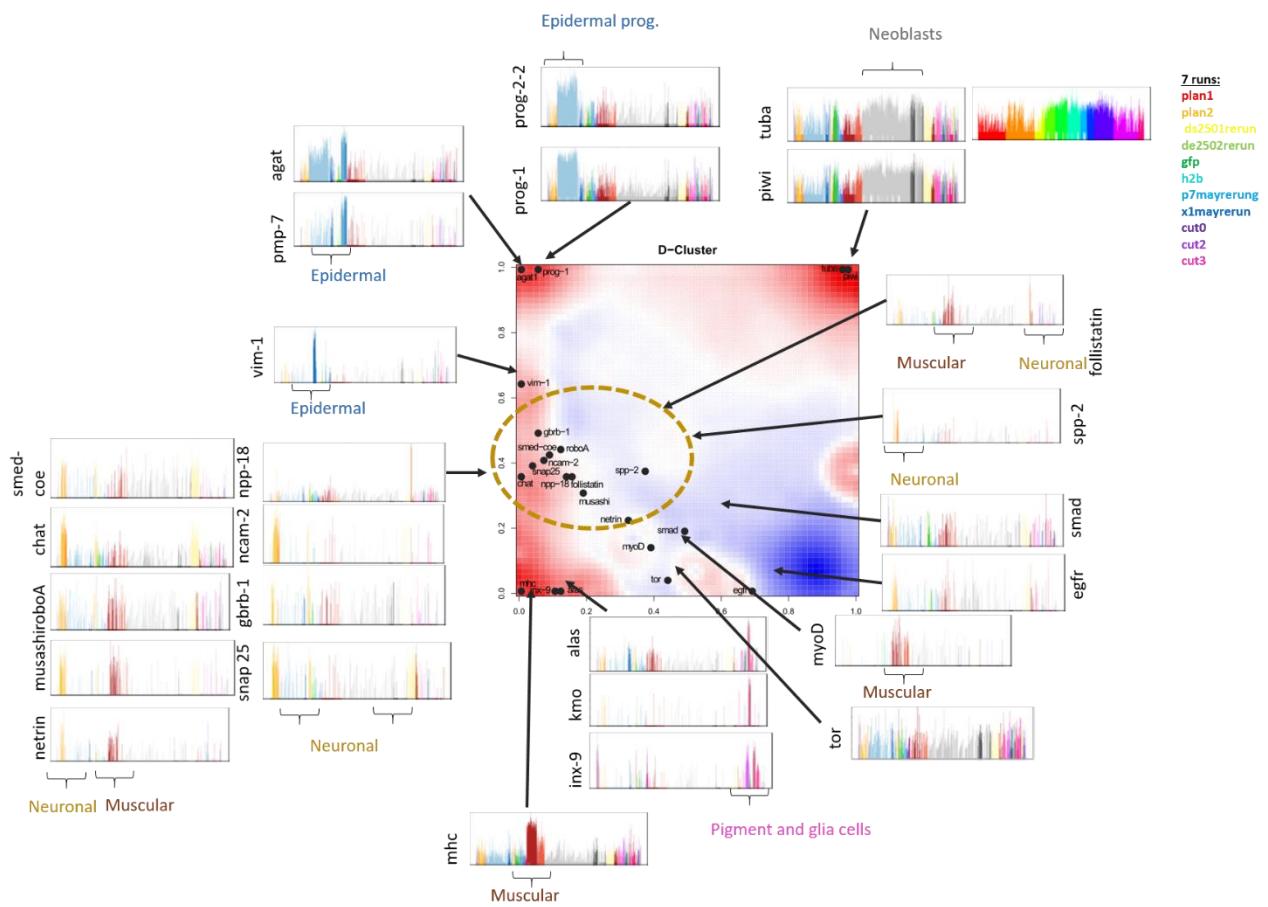

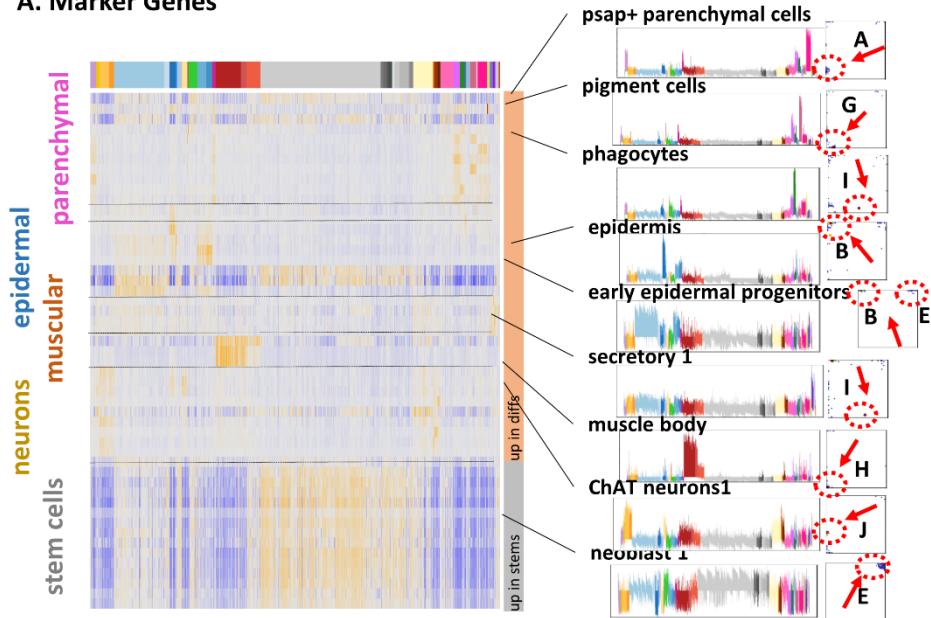

Figure S 2: Positions of selected genes are shown in the map together with their expression profiles (for References see **Table S 1**).

Expression profiles and gene maps

A. Marker Genes

B. Planarian gene sets (Plass et al. 2018)

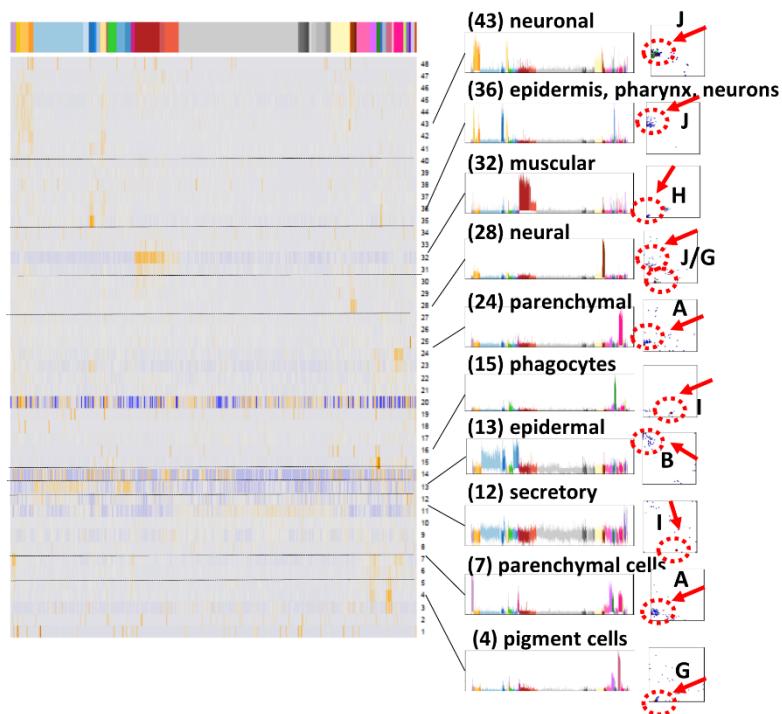

Figure S 3: Profiles and maps of tissue-wise differentially expressed genes and gene sets which were identified by [5].

2. Supplementary Tables

Table S 1: References of selected marker genes of **Figure S 1**.

Table S 2: Overview of module-wise (M.) enriched gene sets of the GO terms Biological Process, Cellular Component, Molecular function and Protein Domains.

M.	Cells	Top GO term based gene set Biological process	Cellular Component	Molecular function	Protein Domain
A	Parenchym, Phagocytes		Lysosome (-9) Lytic vacuole (-9) Vacuole (-8) Immunological synapse (-3)		Protein-tyrosine phosphatase, (-7) Cysteine peptidase (-6)
B	Epidermal cells		Spectrin (-4) Fusome (-3) cuticular plate (-3) actin cytoskeleton (-3)		Dynein light chain, type 1/2 (-7) EF-hand domain (-6)
E		translational elongation and termination (≥ 79) cotranslational protein targeting to membrane (≥ 73) protein targeting to ER (-72) Peptide and amid biosynthetic process (≥ 71) nuclear-transcribed mRNA catabolic process, nonsense-mediated decay (-70) peptide metabolic process (-67) Viral transcription and gene expression (-65) nuclear-transcribed mRNA catabolic process (-65) cellular protein complex disassembly (-65) multi-organism metabolic process (-65)	cytosolic ribosome (-96) ribosomal subunit (-87) cytosolic part (-84) Ribosome (-81) ribonucleoprotein complex (-63) cytosolic large ribosomal subunit (-56) large ribosomal subunit (-49) cytosolic small ribosomal subunit (-33) Cytosol (-28) macromolecular complex (-23) non-membrane-bounded organelle (-19)	structural constituent of ribosome (-84) structural molecule activity (-55) RNA binding (-30) nucleic acid binding (-17) heterocyclic compound binding (-5) organic cyclic compound binding (-5)	Ribosomal protein L10/L12 (-5) Translation protein SH3-like domain (-5)
G		organonitrogen compound catabolic process (-6) tyrosine catabolic process (-5)			
H	Muscle	muscle structure development (-9) tissue development (-8) actin filament-based process (-7)	contractile fiber (-19) Myofibril (-16) Sarcomere (-16) I band (-12) Z disc (-10) collagen trimer (-10)	structural constituent of muscle (-10) extracellular matrix structural constituent (-8)	Collagen triple helixrepeat (-18) Fibrillar collagen, C-terminal (-12) Immunoglobulin subtype (-10)

	anatomical structure development (-6) muscle organ development (-6) cellular component morphogenesis (-6) anatomical structure morphogenesis (-6) actin cytoskeleton organization (-6) organ development (-5) developmental process (-5)	complex of collagen trimers (-8) extracellular matrix component (-8) actin cytoskeleton (-7) extracellular matrix (-6) m	structural molecule activity (-8) cytoskeletal protein binding (-8) actin binding (-8)	Collagen IV, non-collagenous (8) Immunoglobulin-like fold (-7) Immunoglobulin-like domain (-7) Immunoglobulin subtype 2 (-6) Immunoglobulin I-set (-5)
A1 (k)	G-protein coupled receptor signaling pathway (>47) cell communication (-12) Signaling (-11) single organism signaling (-11) signal transduction (-10) ion transport (-9) feeding behavior (-8) Behavior (-7) transmembrane transport (-7) neurological system process (-7)	Integral/intrinsic component membran and plasma membrane (>33) cell periphery (-12) ion channel complex (-6) transmembrane transporter complex (-6)	G-protein coupled receptor activity (-62) transmembrane signaling receptor activity (-57) signaling receptor activity (-54) neurotransmitter receptor activity (-47) signal transducer activity (-40) molecular transducer activity (-39) neuropeptide receptor activity (-36) G-protein coupled peptide receptor activity (-34) G-protein coupled amine receptor activity (-22)	GPCR, rhodopsin-like, 7TM (-158) DDE superfamily endonuclease, CENP-B-like (-31) Homeodomain-like (-29) Ribonuclease H-like domain (-24) HAT dimerisation domain, C-terminal (-17) Homeobox domain (-15) Tubulin (-12) Na ⁺ channel, amiloride-sensitive (-11) Zinc finger, C2H2 (-7) Innixin (-6)
F (k)	microtubule-based movement (-18) microtubule-based process (-15) cilium morphogenesis/organization/assembly (>14) movement of cell/subcellular component (-9) Cilium/flagellum-dependent cell motility (-7) organelle assembly (-6) Cell projection assembly,/organization/morphogenesis (-6)	Cilium (-26) Cytoskeleton (-21) cell projection (-14) ciliary part (-13) microtubule associated complex (-11) Axoneme (-10) ciliary cytoplasm (-10) Microtubule (-10) dynein complex (-10) Centrosome (-5)	microtubule motor activity (-17) motor activity (-15) nucleoside-triphosphatase activity (-5) pyrophosphatase activity (-5) hydrolase activity, acting on acid anhydrides, in phosphorus-containing anhydrides (-5)	Dynein heavy chain (-12) EF-hand domain (-6)
