

BAP1+ vs BAP1-

Disomy 3 vs Monosomy 3

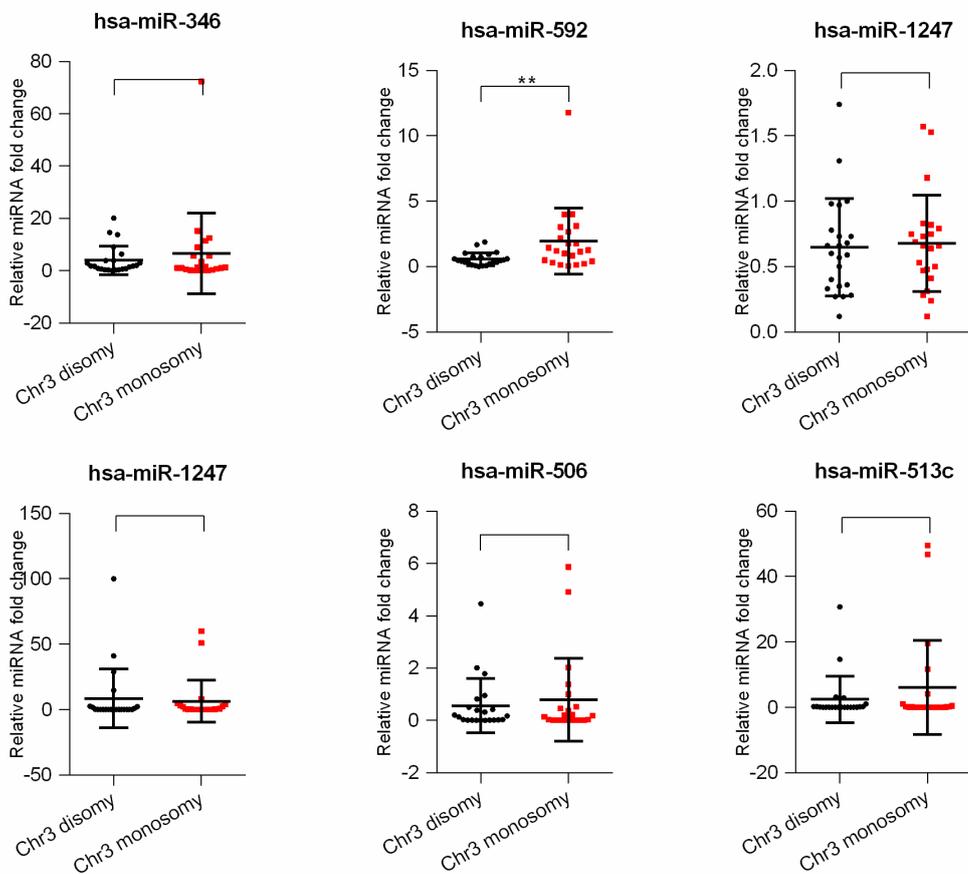

Figure S1. miRNA differentially expressed between BAP1+/- and chromosome 3 disomy/ monosomy uveal melanoma tumors. The results are displayed as relative miRNA fold change calculated as $\log_2\text{-}\Delta\Delta\text{Ct}$. Each dot represents an individual patient. The graph represents mean \pm SD. The statistical differences between two groups were analyzed with Mann-Whitney test where: * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, **** $p < 0.0001$.
