

Supplementary Material

Reservoir Performance and Hedging Parameters at 80% demand level – Comparison of time-varying and constant hedging policies

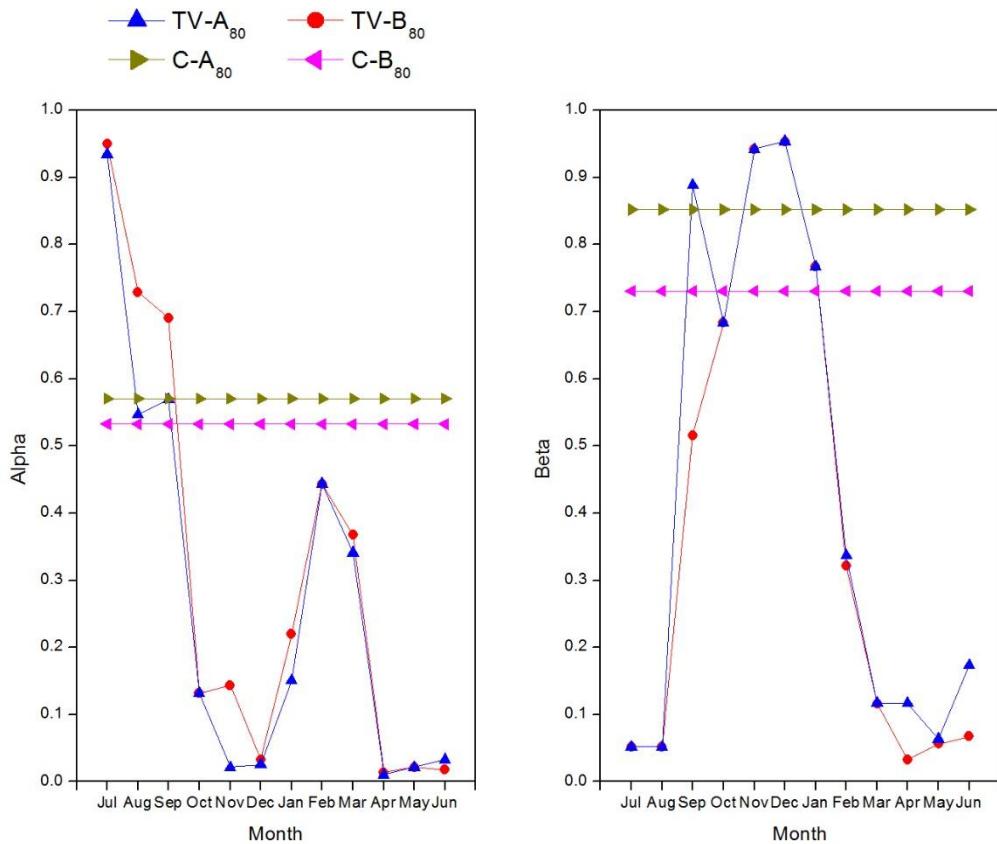

Fig.S1 Time varying and constant hedging parameters (alpha and beta) for two-point hedging policy – a comparison between the selected pareto-optimal solutions for 80% demand level

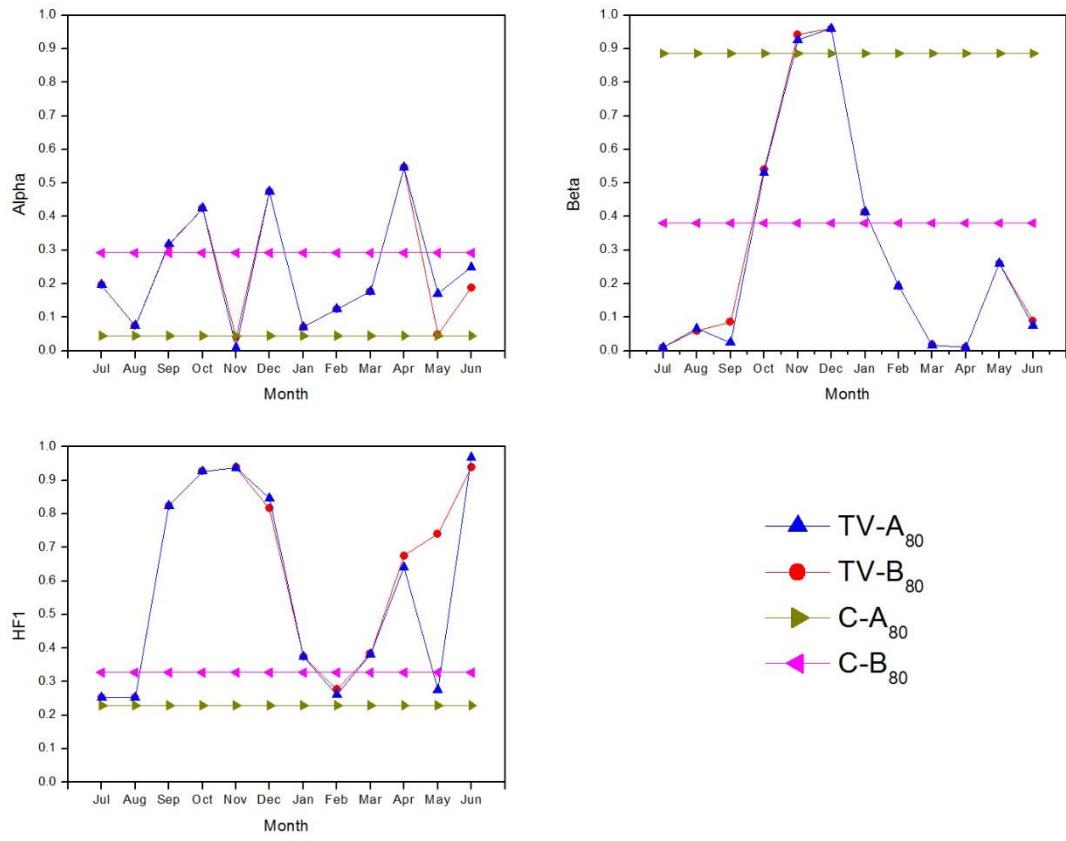

Fig.S2 Time varying and constant hedging parameters (alpha, beta and hedging factor) for modified two-point hedging policy – a comparison between the selected pareto-optimal solutions for 80% demand level

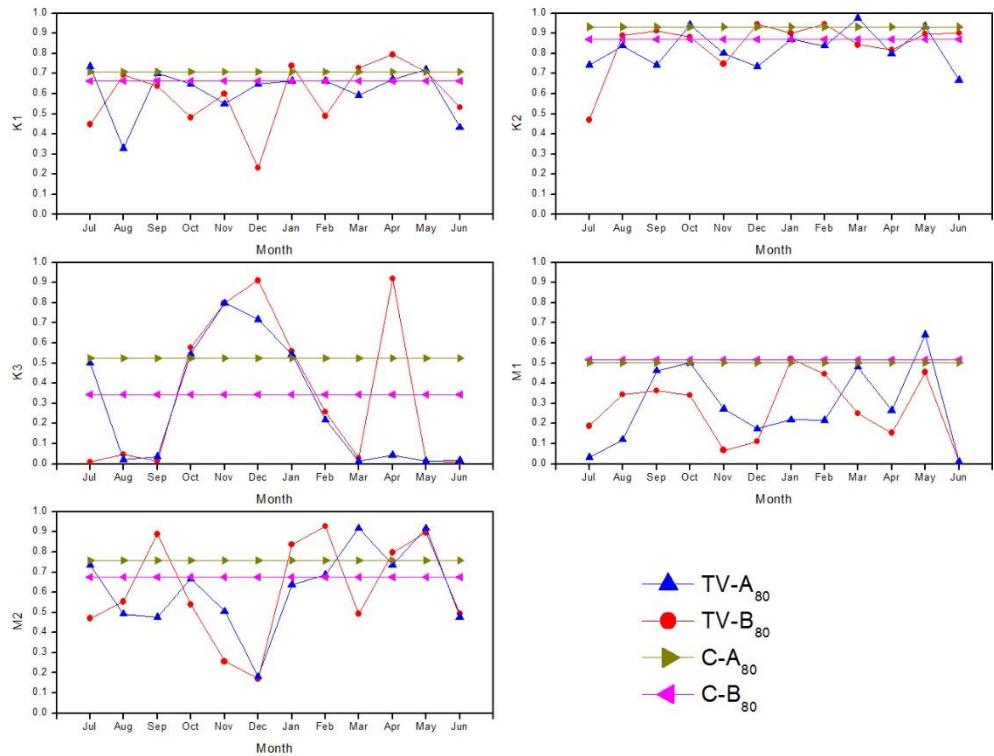

Fig. S3 Time varying and constant hedging parameters (K_1 , K_2 , K_3 , HF_1 , HF_2) for discrete hedging policy – a comparison between the selected pareto-optimal solutions for 80% demand level

Table S4 Comparison of Time Varying and Constant Hedging at 80 % Demand Level for Two Point Linear

	Period Vulnerability	Shortage Ratio	Volume Reliability	Occurrence Reliability	Resilience	Mean Event Deficit	Number of Period Deficits	Number of Event Deficits
