Table S2. Statistical differences in physico-chemical parameters and UV-visible absorbance data between the seasons for each water sampling location. The *p*-values are determined by Kruskal–Wallis test (1st line) and Mann–Whitney U test (2nd line) for each parameter. Note that in August only DOC, SUVA₂₅₄ and normalized molecular weight (WAMW) are present. Red indicates significant *p*-values (i.e. < 0.05).
