

**Table S1.** Signal peptide library of all peptides used that had predicted +1/+2 QA cleavage residues matching those of Srt4M Δ59.

Signal Peptide (SP) Sequence	Protein Name	Species	Uniprot Accession	SP Length	Size (w/ SP)
MNYTSYLAFQLCVILCSSGYC	IFN-γ	Ailuropoda melanoleuca	Q4ZH68	23	166
MASGVITITLAIIFALEINA	Complement component C9	Rattus norvegicus	Q62930	20	554
MEHKVICVLAVVLMFAFGSLA	Trefoil Factor 1	Mus musculus	Q08423	21	87
MLAEWGACLLLAVALGPGQLQA	CUB domain containing protein 2	Homo sapiens	Q5VXM1	22	449
MILSLFLSLGGPLGWLLGAWA	Multimerin-2	Homo sapiens	Q9H8L6	22	949
MKALPALPLMLMLSMPPPCAP	Microfibril-associated glycoprotein 4	Mus Musculus	Q9D1H9	22	257
MRLLVLAALLTVGAG	Phospholipase A2	Bos taurus	P00593	15	145
MKALLTFGLSLLAALQA	Von Ebner gland protein 1	Ratus rattus	P20289	18	177
MGTLQGLLLWLLGTGGA	lutropin subunit beta	Oryctolagus cuniculus	Q6IY74	18	141
MKFVPCLLLVTLSCGLTLG	fibroblast growth factor binding protein 2	Homo Sapiens	Q9BYJ0	19	223
MAWTPLLLFLSHCTGSLS	Immunoglobulin lambda variable 5-45	Homo sapiens	A0A087WSX0	19	123
MAWTPLFLFLTCCPGSNS	Immunoglobulin lambda variable 7-46	Homo sapiens	A0A075B6I9	19	117
MVSVPTTWCSVALALLVALHEGKG	Endothelin-2	Homo sapiens	P20800	24	178
MSGIGWQTLSSLGLVLSILNKVAP	Slit homolog 2	Mus musculus	Q9R1B9	25	1521
MPGIKRLTVTILALCLPSPGNA	Fibulin-5	Homo sapiens	Q9UBX5	23	448
MVMLLLLLSALAGLFGAAEG	Apolipoprotein D	Homo sapiens	P05090	20	189
METQRASLCLGRWSLWLLLLALVVPASA	Prophenin-2	Sus scrofa	P51525	29	228

**Table S2.** Signal peptides that were found after nanopore sequencing of PCR amplified DNA from cells selected with 20 ug/mL of puromycin for over 5 months.

Sequence	Protein	Species	# of reads
MKALLTFGLSLLAALQA	Von Ebner gland protein 1	Ratus rattus	27
MEHKVICVLAVVLMFAFGSLA	trefoil factor 1	Mus Musculus	10
MAWTPLFLFLTCCPGSNS	Immunoglobulin lambda variable 7-46	Homo Sapiens	6
MKFVPCLLLVTLSCGLTLG	fibroblast growth factor binding protein 2	Homo Sapiens	2
MGTLQGLLLWLLGTGGA	lutropin subunit beta	Oryctolagus cuniculus	2

**Figure S2. Split intein vector backbone maps.** **A.** N-terminal PuroR N-terminal intein vector backbone with relevant unique restriction sites indicated (left). C-terminal intein C-terminal PuroR vector backbone with relevant unique restriction sites (right). SbfI and MluI sites are shown in red to highlight the different locations between the N-terminal and C-terminal plasmids whereas all other restriction enzyme sites are in identical locations in both plasmids. **B.** A combined vector containing both tricistronic cassettes linked to N- and C-terminal intein-puromycin cistrons.

**Figure S3 Competitive DEC-205 staining of MutuDC cell line pre-treated with siRNA-conjugated  $\alpha$ -DEC-205 antibody.** MutuDC were pre-treated (orange) or not pre-treated (gray) with  $\alpha$ -DEC-205-siRNA at 5  $\mu$ g/ml for 10 mins and subsequently stained with anti-mouse DEC-205 PE-Cy7 (BioLegend 138209) following the manufacture's protocol. The overlaid histogram shows PE-Cy7 intensity as indicated.
