

Supplementary data:

Table S1. Selected parameters of chlorophyll *a* fluorescence characterizing PSII efficiency in plants of Bowman and its NILs (BW084, BW312) growing under control conditions (Control), inoculated by wheat powdery mildew (*Bgt*), exposed to heat (Heat) and heat pre-treated + inoculated by wheat powdery mildew (Heat+*Bgt*). Mean values marked with the same letters did not differ significantly at $p \leq 0.05$ according to Duncan's test; DPI – days post inoculation. Heat pre-treated plants were immersed into 49 °C water for 30 s 24 h before inoculation. Measurements were carried out on 11 (3DPI) and 18 (10 DPI) days old plants.
