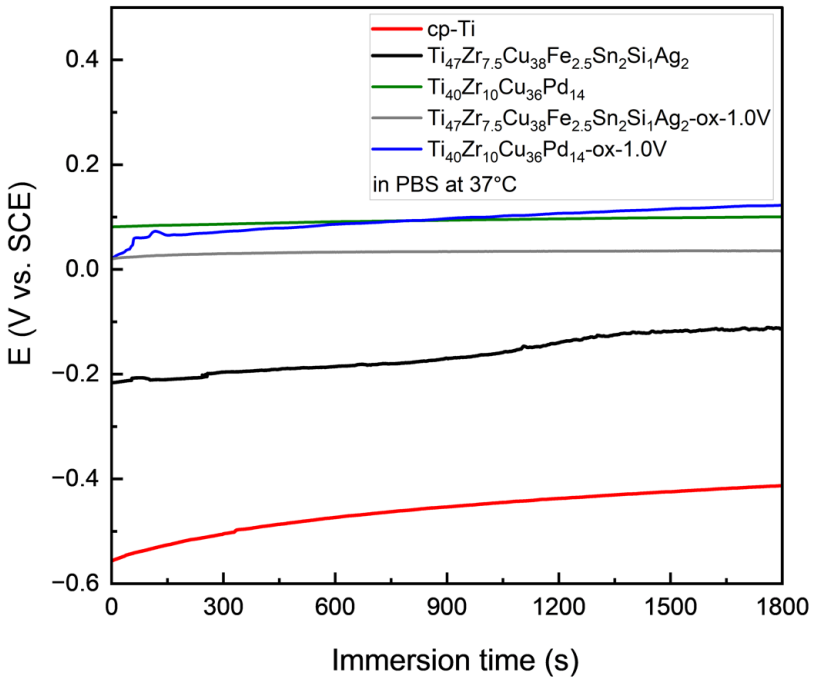

Figure S1 Representative OCP curves measured for 30 min in PBS (pH 7.4) at 37 °C for Ti sheets in as-polished, air-aged states and glassy $Ti_{47}Cu_{38}Zr_{7.5}Fe_{2.5}Sn_2Si_1Ag_2$ and $Ti_{40}Zr_{10}Cu_{34}Pd_{14}Sn_2$ ribbon samples in as-spun state and after potentiostatic polarization treatment in 5 M HNO_3 solution at 60 °C at 1 V vs. SCE for 60 min.
