

Figure S6. 3D models for Om20812. (a) and (b) Side and top view, respectively, of the monomer cartoon showing the position of the two NPA motifs (red spheres) and the aromatic arginine (ar/R) constriction (orange spheres); (c) and (d) side and top view of the tetramer cartoon; (e) monomer mesh and surface model showing the exposure of the 3 antigenic peptides on the extracellular surface of the molecule: Om20812_A yellow, Om20812_C orange, and Om20812_E cyan. (f) side and top view of tetramer surface model showing peptide exposure.
