Table S1. The XRD and phase identification of the high-grade monazite ore conducted by John de Laeter Centre, Curtin University. The COD ID refers to the phase's identification number in the COD database (http://www.crystallography.net/).

| Phase	Nominal elemental composition
Monazite, Ce	$CePO_4$
Monazite, La	$LaPO_4$
Quartz	SiO_2
Goethite	$FeOOH$
Florencite-Ce	$Al_3(Ce,La,Nd,Sm,Ca)(PO_4)_2(OH)_6$

Table S2. The inductively coupled plasma mass spectrometry (ICP-MS) analysis of high-grade monazite ore conducted by Bureau Veritas, Perth, Australia.

Figure S1. Scanning electron microscopy (SEM) image of the smooth surface of glass (**a**) vs. the rough surface of the high-grade monazite ore (**b**).
Figure S2. The general pattern of eDNA production on monazite (**a**) and xenotime (**b**) based on confocal laser scanning microscopy (CLSM). The green fluorescent represents eDNA (eDNA) and blue represent genomic DNA (gDNA). More eDNA was produced using monazite. Yellow circle marks the xenotime grain used for 3D re-construction in Figure 5.
Figure S3. The interaction of *Klebsiella aerogenes* cells with surface pre-conditioned with eDNA.
