

Suppl. Figure 1, Oliver et al

Supplementary Figure 1. Biological activity of *P. salmonis* Hsp60 peptide. Relative expressions of (A) *il-1 β* and (B) *tnf- α* in SHK-1 cells stimulated with the Hsp60 peptide (100 μ M) in the presence or absence of the NF- κ B inhibitor BAY 11-7082. GAPDH and β -actin were used to normalize the mRNA levels of Hsp60. Values represent the mean \pm standard deviation from three independent experiments. Asterisks (*) indicate significant differences ($p < 0.05$).

Suppl. Figure 2, Oliver et al

Supplementary Figure 2. Immunolocalization of Hsp60 in *P. salmonis* outer membrane vesicles (OMVs). Electron micrograph of *P. salmonis* LF-89^T showing Hsp60 labeling in a forming OMV (arrow). Bar scale = 0.5 μm .
