#### Supplemental figures:

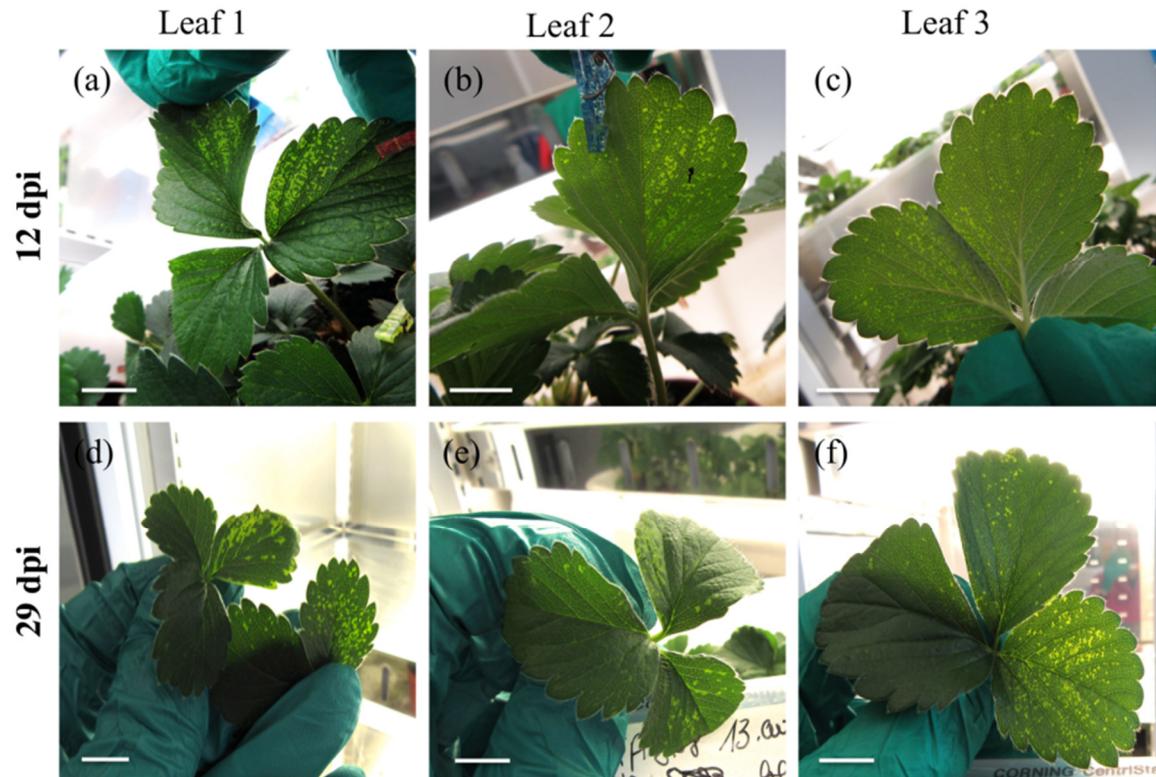

Figure S1. Symptomatic strawberry leaves.

#### Supplemental tables:

Table S1. RNA quantity and quality for each leaf replicates.

Table S2. Differentially expressed genes of *Xanthomonas fragariae*.

Table S3. Differentially expressed genes of *Fragaria × ananassa*.

**Figure S1.** Symptomatic strawberry leaves. The pictures show representative results from spraying inoculation with *Xanthomonas fragariae* PD 885<sup>T</sup> and collected (a–c) at 12 days post inoculation (dpi) and (d–f) at 29 dpi. Three replicates with symptoms were collected per dpi. The white line represents 1 cm on each picture.

**Table S1.** RNA quantity and quality for each leaf replicates. RNA samples of 12 days post inoculation (dpi) and 29 dpi were used for RNA sequencing. RNA samples were tested before DNase treatment for 260/280, 260/230 ratios and concentrations were reported and subsequently controlled for RNA integrity (RIN) after DNase treatment. Samples with best quality were selected for RNA-sequencing (**bold**).

**Table S2.** Differentially expressed genes of *Xanthomonas fragariae*. This supplementary table provides the complete list of differentially expressed genes of *X. fragariae* while interacting with its host *Fragaria × ananassa* at 12- and 29-days post inoculation (dpi). Genomic information such as locus tag, locus, annotation as well as the gene ontology (GO) are listed below. Normalized values with Fragments Per Kilobase Million (FPKM) are listed for both collection days: 12 and 29 dpi.
