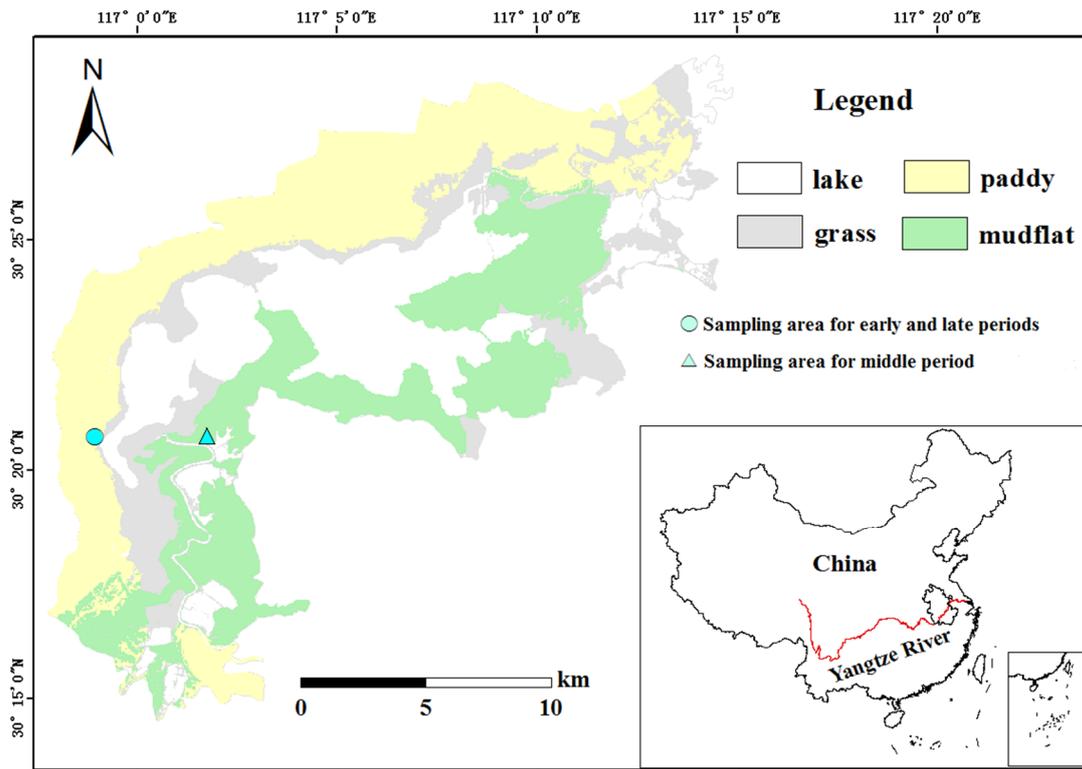

Figure S1. Study area and sample collection sites.

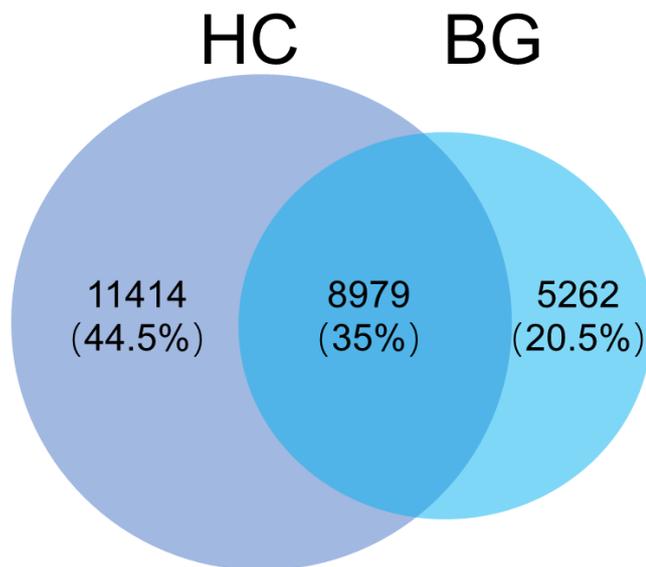

Figure S2. Intestinal bacterial OTUs in the hooded crane and bean goose on overall. HC: hooded crane; BG: bean goose.

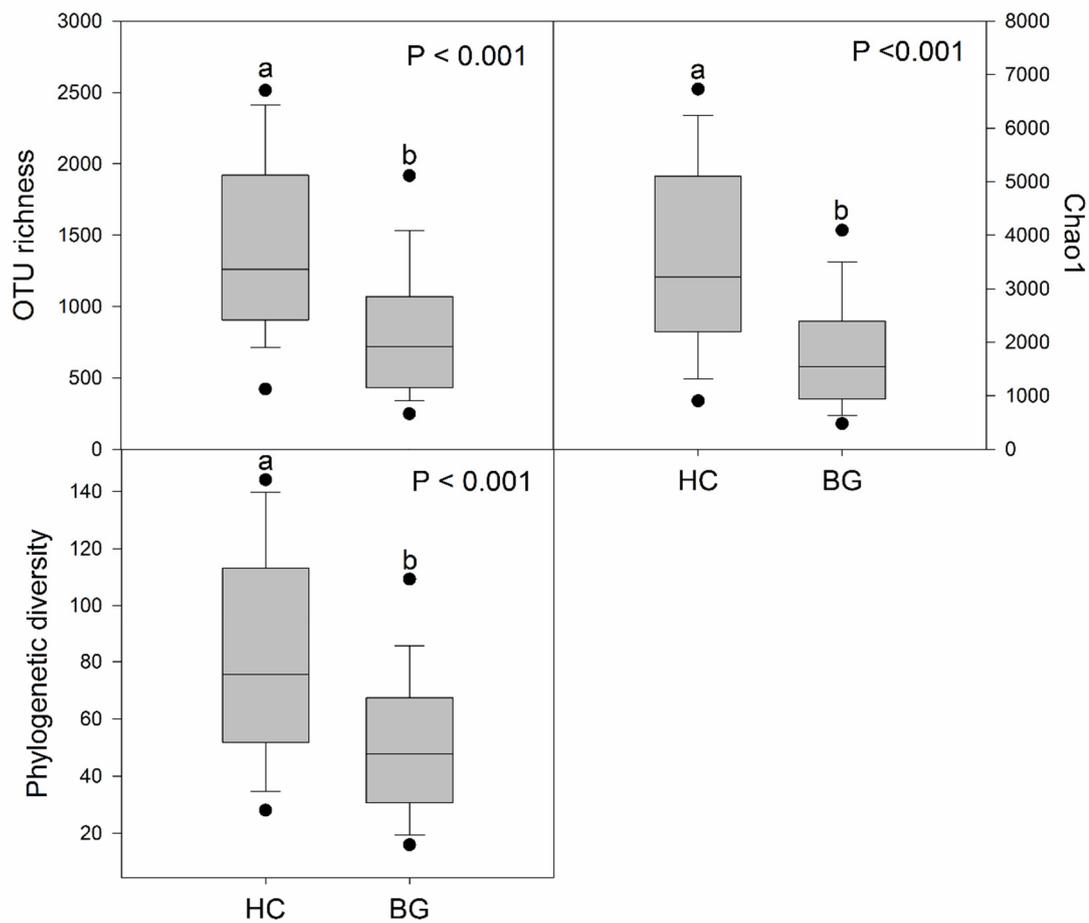

Figure S3. Intestinal bacterial alpha diversity in the hooded crane and bean goose on overall. Bars represent mean; error bars denote standard deviation; Differences of intestinal bacterial alpha diversity between different species were identified by one-way ANOVA ($P < 0.001$). HC: hooded crane; BG: bean goose.

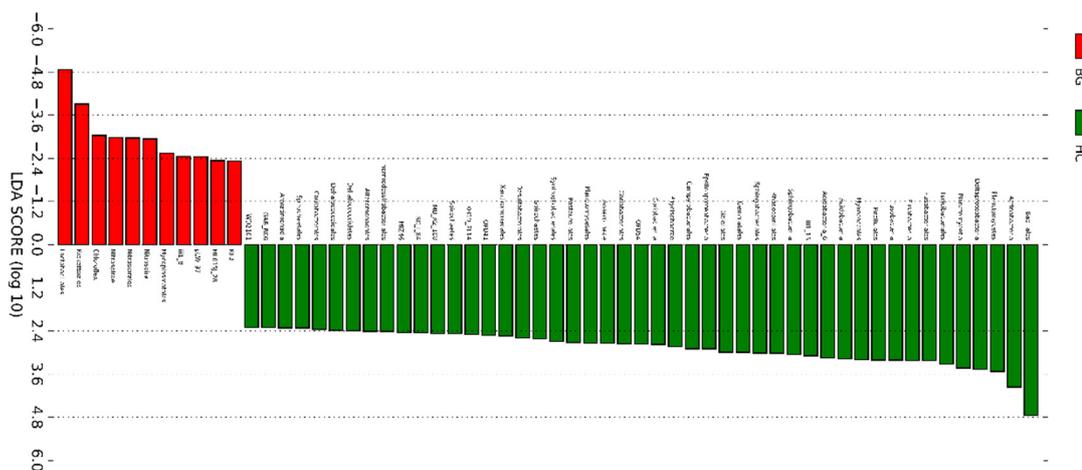

Figure S4. LEfSe analysis of gut bacterial biomarkers in the hooded crane and bean goose. Identified phylotype biomarkers ranked by effect size and the alpha value was < 0.05. red, phylotypes overrepresented in gut of bean goose; green, phylotypes overrepresented in gut of hooded crane. HC: hooded crane; BG: bean goose.

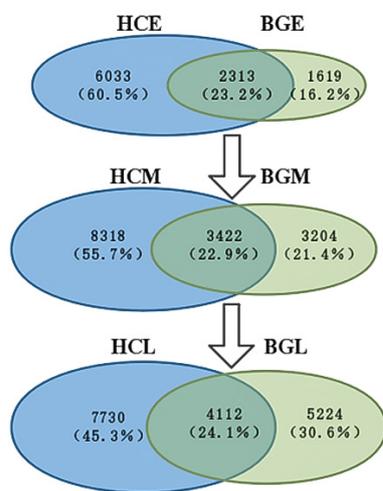

Figure S5. Intestinal bacterial OTUs in the hooded crane and bean goose in different periods. HC: hooded crane; BG: bean goose; E: early period; M: middle period; L: late period.

Table S1. Sampling information of the hooded crane and bean goose.

Wintering period	Species	Sampling time	Sampling site	Habitat	Type and number of species
Early period	Hooded crane	23rd Nov., 2018	Yangetou	Grass land	More than 100 hooded cranes
Early period	Bean goose	23rd Nov., 2018	Yangetou	Grass land	More than 300 bean goose

Middle period	Hooded crane	9th Jan., 2019	Tongxinwei	Rice field	More than 100 hooded cranes
Middle period	Bean goose	10th Jan., 2019	Tongxinwei	Grass land	200-300 bean goose
Later period	Hooded crane	8th Mar., 2019	Yangetou	Grass land	More than 100 hooded cranes
Later period	Bean goose	8th Mar., 2019	Yangetou	Grass land	200-300 bean goose

Table S2. PCR system of 16 S rRNA gene in the V4-V5 region of bacteria.

Component	Volume
5×FastPfu Buffer	4 µl
2.5 mM dNTPs	2 µl
Forward Primer ¹ (5 µM)	0.8 µl
Reverse Primer ² (5 µM)	0.8 µl
FastPfu Polymerase	0.4 µl
BSA	0.2 µl
Template DNA	10 ng
ddH ₂ O	up to 20 µl

¹ Forward Primer: 515F (5'-GTGCCAGCMGCCGCGG-3') ² Reverse Primer: 907R (5'-GGACTACHVGGGTWTCTAAT-3').
