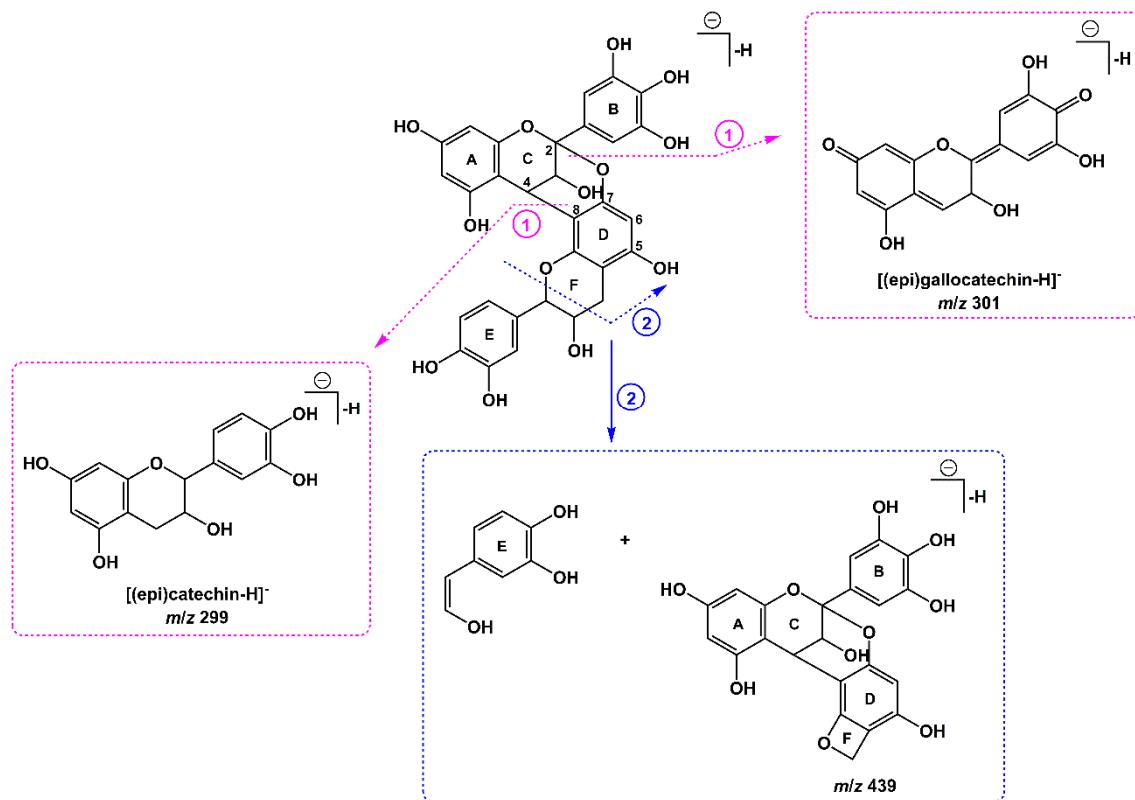

Figure S1. Mass fragmentation of (epi)gallocatechin-(2→O7, 4→8)-(epi)catechin in the negative ionisation mode.

Table S1. *S. aureus* counts after application of *Pinus pinaster* Ait. and *Pinus pinea* L. bark polar extracts. (a) *S. aureus* control: The bacterial control was only inoculated with *E. coli*; (b) Solvent control: The solvent control represents the bacterial growth under 12.5% (v/v) ethanol; (c) *Pinus pinaster* Ait. extract: The results represent the effect of *P. pinaster* Ait. bark polar extract against the growth of *S. aureus* and (d) *Pinus pinea* L. extract: The results represent the effect of *P. pinea* L. bark polar extract against the growth of *S. aureus*. *Pinus* spp. bark polar extracts were prepared in triplicate (samples 1-3). Each sample was evaluated three times (assay 1- 2) in different periods to secure independent replication. with three replicates (R1-R3) for each concentration. The results represent the mean of the three independent experiments in the three samples studied and their standard deviations.

(a) *S. aureus* control

	Number of colonies									Dilution	Dilution factor	CFU mL ⁻¹	log (CFU mL ⁻¹)	Average log (CFU mL ⁻¹)	Standard derivation

This table represents the mean of the three independent experiments in the three samples studied and their standard deviations.

Table S2. *E. coli* counts after application of *Pinus pinaster* Ait. and *Pinus pinea* L. bark polar extracts. (a) *E. coli* control: The bacterial control was only inoculated with *E. coli*; (b) Solvent control: The solvent control represents the bacterial growth under 12.5% (v/v) ethanol; (c) *Pinus pinaster* Ait. extract: The results represent the effect of *P. pinaster* Ait. bark polar extract against the growth of *E. coli* and (d) *Pinus pinea* L. extract: The results represent the effect of *P. pinea* L. bark polar extract against the growth of *E. coli*. *Pinus* spp. bark polar extracts were prepared in triplicate (samples 1-3). Each sample was evaluated three times (assay 1- 2) in different periods to secure independent replication, with three replicates (R1-R3) for each concentration. The results represent the mean of the three independent experiments in the three samples studied and their standard deviations.

(a) *E. coli* control

	Number of colonies									Average	Dilution	Dilution factor	CFU mL ⁻¹	log (CFU mL ⁻¹)	Average log (CFU mL ⁻¹)	Standard derivation

This table represents the mean of the three independent experiments in the three samples studied and their standard deviations.
