Figure S1: GTT curves showing plasma glucose levels after i.p. administration of glucose (1.5 g/kg b.w) in Chow diet, HFD and HFD + Pol fed mice after 7, 14 and 20 weeks of polyphenol-supplementation. Data are presented as the mean \pm SEM. # $p < 0.05$; ## $p < 0.01$; ### $p < 0.001$ versus Chow diet-fed animals; * $p < 0.05$; ** $p < 0.01$ versus HFD-fed animals (n=8-11/group).

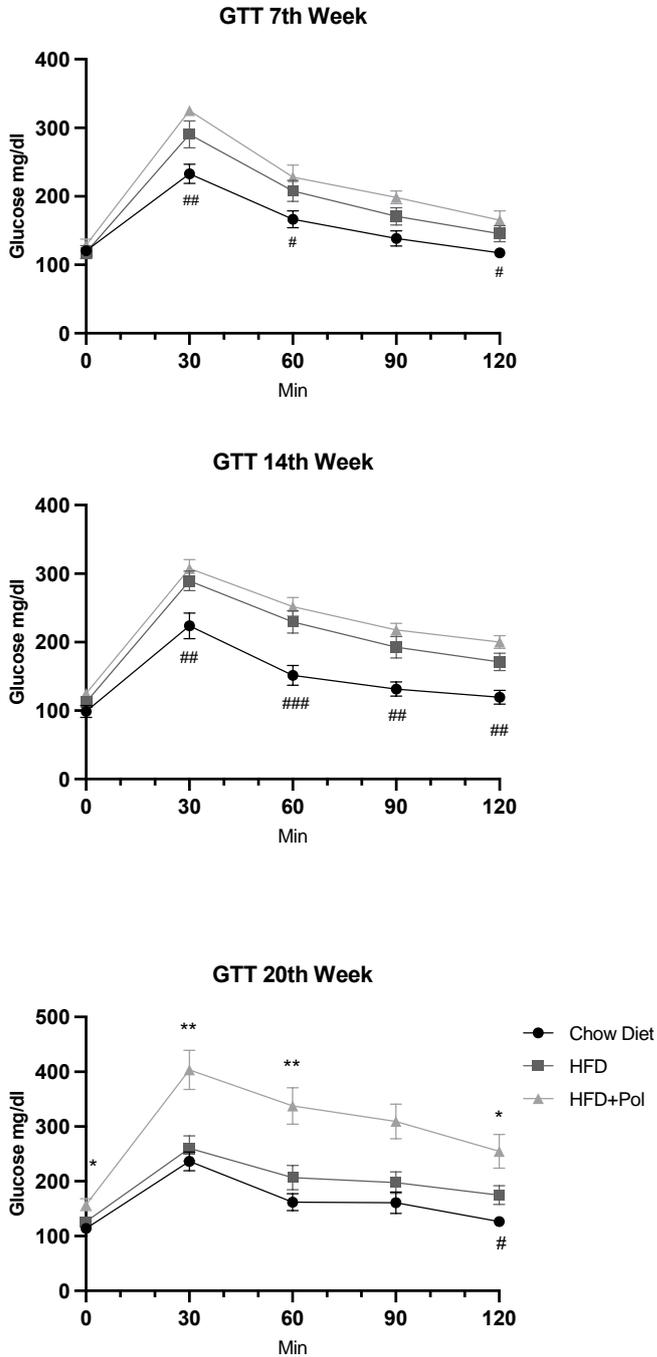

Figure S2: ITT curves showing plasma glucose levels after i.p. administration of insulin (0.5 UI/kg b.w) in Chow diet, HFD and HFD + Pol fed mice after 8, 15 and 21 weeks of polyphenol-supplementation. Data are presented as the mean \pm SEM. # $p < 0.05$; ## $p < 0.01$ versus Chow diet-fed animals; * $p < 0.05$ versus HFD-fed animals (n=8-11/group).
