Table S1: List of primary antibodies used and their working dilutions

Antibody	Host Species	Source	Cat#	Dilution	Validation
p-Akt(Ser473)	Rabbit	Cell Signaling Technologies	4060	1:2000	Supplier
Akt	Rabbit	Cell Signaling Technologies	4685	1:2000	Supplier
β -actin	Mouse	Genescript	A00730-100	1:10,000	Supplier
eNOS	Rabbit	Santa Cruz Biotechnology	sc-654	1:1000	Supplier
PCSK9	Sheep	R&D systems	AF3888	1:2000	Supplier
LDLR	Rabbit	Biovision	3839-100	1:2000	Supplier
Goat anti rabbit HRP	Goat	Sigma	A0545	1:10,000	Supplier
Anti sheep HRP	Donkey	R&D systems	HAF016	1:1000	Supplier

Table S2: Primers list for qPCR in mice

Gene	Forward Primer Sequence (5'-3')	Reverse Primer Sequence (5'-3')
eNOS	CAACGCTACCACGAGGACATT	CTCCTGCAAAGAAAAGCTCTGG
nNOS	CCAACCCAACGTCATTCTG	CATAGCTGAGGTCTACCAGG
iNOS	ACCTTGTTTCAGCTACGCCTT	CATTCCCAAATGTGCTTGTC
PEPCK	TCTCTGATCCAGACCTTCCAA	GAAGTCCAGACCGTTATGCAG
G6PC	AAGCCAACGTATGGATTCCG	ACAGCAATGCCTGACAAGACT
PC	GGGATGCCCACCAGTCACT	CATAGGGCGCAATCTTTTGA
SREBP-1c	GGAGCCATGGATTGCACATT	CCTGTCTCACCCCCAGCATA
FAS	GGCATCATTGGGCACTCCTT	GCTGCAAGCACAGCCTCTCT
ACC1	GGACAGACTGATCGCAGAGAAAG	TGGAGAGCCCCACACACA
PPAR γ	AGTGGAGACCGCCCAGG	GCAGCAGGTTGTCTTGATGT
LXR α	GCTCTGCTCATTGCCATCAG	TGTTGCAGCCTCTCTACTTGGA
PPAR α	GTCCTCAGTGCTTCCAGAGG	GGTCACCTACGAGTGGCATT
PGC-1 α	AACCACACCCACAGGATCAGA	TCTTCGCTTTATTGCTCCATGA
PGC-1 β	CGCTCCAGGAGACTGAATCCAG	CTTGACTACTGTCTGTGAGGC
CD36	GCAAAACGACTGCAGGTCAAC	TGGTCCCAGTCTCATTTAGCCA
SR-1B	GGCTGCTGTTTGCTGCG	GCTGCTTGATGAGGGAGGG
ABCG5	TGGATCCAACACCTCTATGCTAAA	GGCAGGTTTTCTCGATGAACTG
ABCG8	TGCCCACCTTCCACATGTC	ATGAAGCCGGCAGTAAGGTAGA
ApoE	AACCGCTTCTGGGATTACCT	CAGTGCCGTCAGTTCTTGTC
LPL	AAGGTCAGAGCCAAGAGAAGCA	CCAGAAAAGTGAATCTTGACTTGGT
18S rRNA	GCAATTATTCCCCATGAACG	GGCCTCACTAAACCATCCAA

* Primers were from Integrated DNA Technology

Supplementary figures

Figure S1: Systemic metabolic homeostasis and NOS isoforms expression in chow fed WT and *iNOS*^{-/-} mice. Metabolic homeostasis and energy utilisation (WT: *n* = 8, *iNOS*^{-/-}: *n* = 10) (A) VCO₂, (B) Heat production and (C) Metabolic rates (RMR and BMR). NOS isoforms expression (D) eNOS and nNOS qPCR gene expression in liver (WT: *n* = 11, *iNOS*^{-/-}: *n* = 16), (E) eNOS and nNOS qPCR gene expression in adipose tissue (WT: *n* = 9, *iNOS*^{-/-}: *n* = 10) (F) iNOS qPCR gene expression in liver (*n* = 8) and adipose tissue (*n* = 7). Gross measurement of body length (G) Nose to anus length (WT: *n* = 20, *iNOS*^{-/-}: *n* = 16). Indexes of insulin sensitivity and β -cell functionality (WT: *n* = 16, *iNOS*^{-/-}: *n* = 18) (H) HOMA-IR, (I) HOMA-B (J) QUICKI and serum lipids (WT: *n* = 16, *iNOS*^{-/-}: *n* = 22) (K) HDL in chow fed WT and *iNOS*^{-/-} mice. Data

are represented as mean $\pm$ SEM. Black circles: WT, Black squares: $iNOS^{-/-}$ mice. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, **** $p < 0.0001$ vs WT.

Figure S2: Gross parameters, systemic glucose tolerance, insulin sensitivity, gluconeogenesis and lipids in chow fed $iNOS^{-/-}$ mice with or without nitrite supplementation. (A) Total nitrite levels in serum ($iNOS^{-/-}$: $n = 24$, $iNOS^{-/-}$ + Nitrite: $n = 18$), (B) Total nitrite levels in insulin sensitive tissues—liver ($n = 9$), white adipose tissue ($n = 8$) and skeletal muscle ($n = 5$). (C) Intraperitoneal glucose tolerance test (GTT) and (D) Area under the curve (AUC) calculated from IPGTT data ($iNOS^{-/-}$: $n = 40$, $iNOS^{-/-}$ + Nitrite: $n = 24$). (E) Final body weight ($iNOS^{-/-}$: $n = 16$, $iNOS^{-/-}$ + Nitrite: $n = 8$), (F) Body mass index (BMI) ($iNOS^{-/-}$: $n = 16$, $iNOS^{-/-}$ + Nitrite: $n = 8$), (G) Whole

body fat mass and lean mass (%) (iNOS^{-/-}: $n = 12$, iNOS^{-/-} + Nitrite: $n = 10$), **(H)** Intraperitoneal insulin tolerance test (ITT) and **(I)** AUC calculated from ITT (iNOS^{-/-}: $n = 10$, iNOS^{-/-} + Nitrite: $n = 6$), **(J)** Relative liver weight (iNOS^{-/-}: $n = 16$, iNOS^{-/-} + Nitrite: $n = 18$) and epididymal white adipose tissue weight (eWAT) ($n = 12$), **(K)** Fasting blood glucose levels (iNOS^{-/-}: $n = 40$, iNOS^{-/-} + Nitrite: $n = 24$), **(L)** Fasting serum insulin levels (iNOS^{-/-}: $n = 18$, iNOS^{-/-} + Nitrite: $n = 12$), **(M)** Intraperitoneal pyruvate tolerance test (PTT) and **(N)** AUC calculated from PTT (iNOS^{-/-}: $n = 10$, iNOS^{-/-} + Nitrite: $n = 6$). Lipid levels in 6 hours fasting serum (iNOS^{-/-}: $n = 22$, iNOS^{-/-} + Nitrite: $n = 18$) **(O)** Total cholesterol (TC), **(P)** Triglycerides (TG), **(Q)** Non-esterified free fatty acids (NEFA), **(R)** Low density lipoprotein (LDL). Data are represented as mean $\pm$ SEM. Black squares: iNOS^{-/-} mice without nitrite supplementation, Black diamonds: iNOS^{-/-} mice with nitrite supplementation. $*p < 0.05$, $**p < 0.01$, $***p < 0.001$, $****p < 0.0001$ vs iNOS^{-/-}. **(S)** Immunoblot of LDLR in liver ($n = 4$). **(T)** Immunoblot of PCSK9 in liver ($n = 5$) in chow fed iNOS^{-/-} mice with or without nitrite supplementation. White circles: WT; black circles: WT supplemented with nitrite; White squares: iNOS^{-/-}; Black squares: iNOS^{-/-} supplemented with nitrite. $*p < 0.05$, $**p < 0.01$, $***p < 0.001$, between indicated groups.

Figure S3: Systemic metabolic homeostasis and NOS isoforms expression in chow fed *iNOS*^{-/-} mice with and without nitrite supplementation. Metabolic homeostasis and energy utilisation (*iNOS*^{-/-}: *n* = 10, *iNOS*^{-/-} + Nitrite: *n* = 8) (A) VCO₂, (B) Heat production and (C) Metabolic rates (RMR and BMR). NOS isoforms expression (D) eNOS and nNOS qPCR gene expression in liver (*iNOS*^{-/-}: *n* = 16, *iNOS*^{-/-} + Nitrite: *n* = 14), (E) Immunoblot of eNOS in liver (*n* = 5), White circles: WT; black circles: WT supplemented with nitrite; White squares: *iNOS*^{-/-}; Black squares: *iNOS*^{-/-} supplemented with nitrite. **p* < 0.05, ***p* < 0.01 between indicated groups. (F) eNOS and nNOS qPCR gene expression in adipose tissue (*iNOS*^{-/-}: *n* = 10, *iNOS*^{-/-} + Nitrite: *n* = 8). Gross measurement of body length (G) Nose to anus length (*iNOS*^{-/-}: *n* = 16, *iNOS*^{-/-} + Nitrite: *n* = 8). Indexes of insulin sensitivity and β -cell functionality (*iNOS*^{-/-}:

$n = 18$, iNOS^{-/-} + Nitrite: $n = 12$) (H) HOMA-IR, (I) HOMA-B (J) QUCIKI and serum lipids (iNOS^{-/-}: $n = 22$, iNOS^{-/-} + Nitrite: $n = 18$) (K) HDL in chow fed iNOS^{-/-} mice with or without nitrite supplementation. Data are represented as mean $\pm$ SEM. Black squares: iNOS^{-/-} mice without nitrite supplementation, Black diamonds: iNOS^{-/-} mice with nitrite supplementation. * $p < 0.05$, *** $p < 0.001$, **** $p < 0.0001$ vs iNOS^{-/-}.
