

Supplementary file 1. Results of the sensitivity analysis

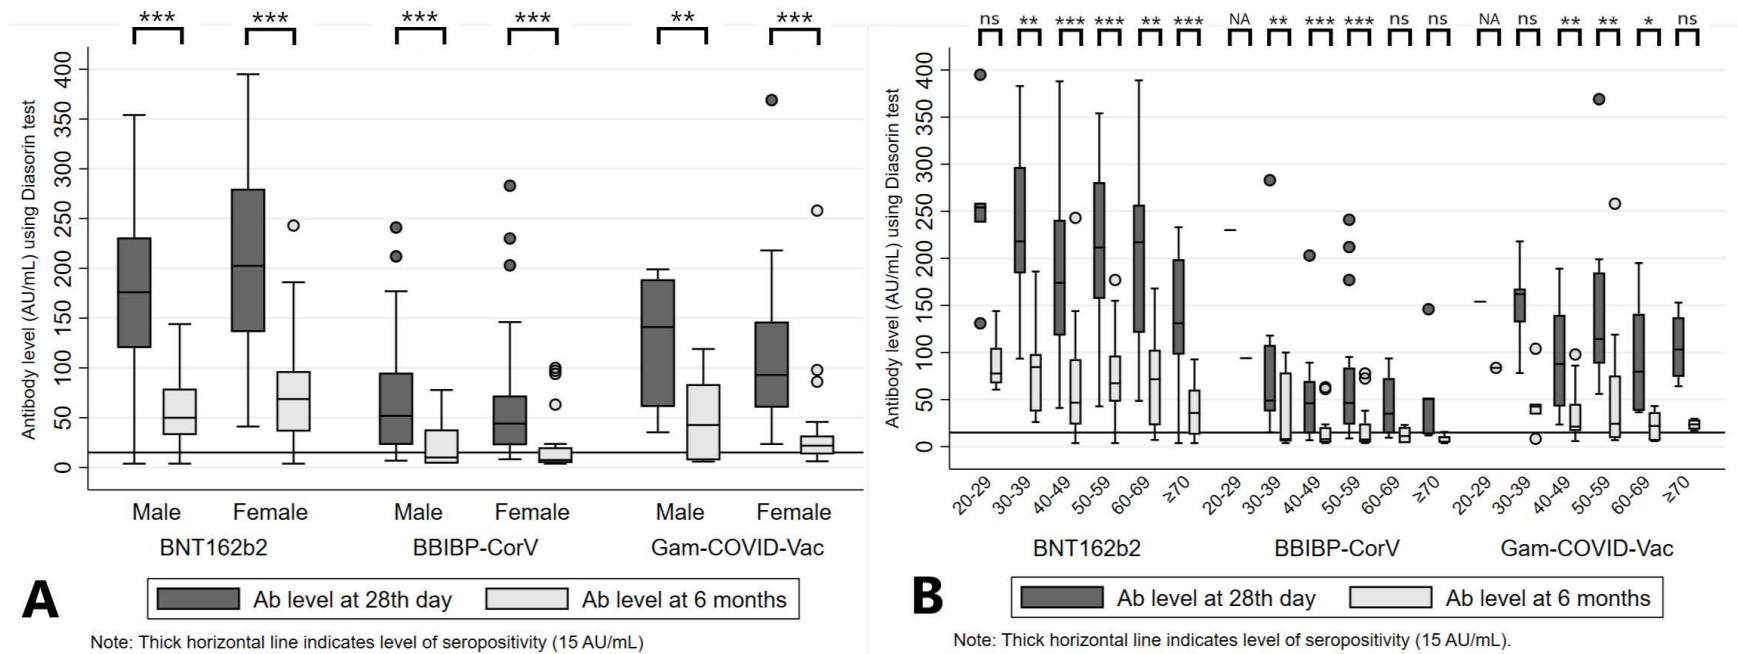

Table of Contents

Supplementary Note Fig 1. Distribution of participants, stratified by vaccine type, sex and number of samples (single or paired), after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants.....	3
Supplementary Note Fig 2. Antibody levels at 28 th day and 6 months after the second dose of vaccine, stratified by sex (A) and age groups (B) of participants, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants.....	4
Supplementary Note Fig 3. Correlation between Ab levels at 28 th day and 6 months after the second dose of BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C) vaccines, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants.....	5
Supplementary Note Fig 4. Antibody levels at 6 months after the administration of BNT162b2, BBIBP-CorV, Gam-COVID-Vac and ChAdOx1 nCoV-19 vaccines, stratified by sex (A) and age groups (B) of participants, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants.....	6
Supplementary Note Fig S1. Proportion of seropositive participants at 28 th day and 6 months after the second dose of vaccine, by sex (A) and age groups (B) of participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).....	7
Supplementary Note Fig S2. Comparison of the percent change in Ab levels between 28 th day and at 6 months from the administration of the second dose of vaccines, stratified by sex (A) and age groups (B) of participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL)	8
Supplementary Note Fig S3. Correlation between %-change and Ab levels measured at 28 th day from the administration of the second dose of BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C) vaccines, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).....	9
Supplementary Note Fig S4. Correlation between percent change in Ab levels and levels at 6 months from the administration of the second dose of BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C) vaccines, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).....	10
Supplementary Note Fig S5. Correlation between percent change in Ab levels and age of participants, by BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C) vaccines, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).....	11
Supplementary Note Fig S6. Correlation between antibody levels measured 6 months post-vaccination after the second dose of BNT162b2 (A), BBIBP-CorV (B), Gam-COVID-Vac (C) and ChAdOx1 nCoV-19	

(D) vaccines, and the age of participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL)	12
Supplementary Note Table 1. Antibody levels on 28 th day and 6 months after administration of the second dose of vaccine, stratified by sex and age groups of the participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).....	13
Supplementary Note Table 2. Percent change in Ab levels between 28 th day and at 6 months, stratified by sex and age groups, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).....	15
Supplementary Note Table 3. Antibody levels at 6 months from the administration of the second dose of vaccine, stratified by sex and age of the participants, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants.....	16
Supplementary Note Table 4. Serological profile of the study participants at 6 months from the administration of the second dose of four different SARS-CoV-2 vaccines, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants.....	18

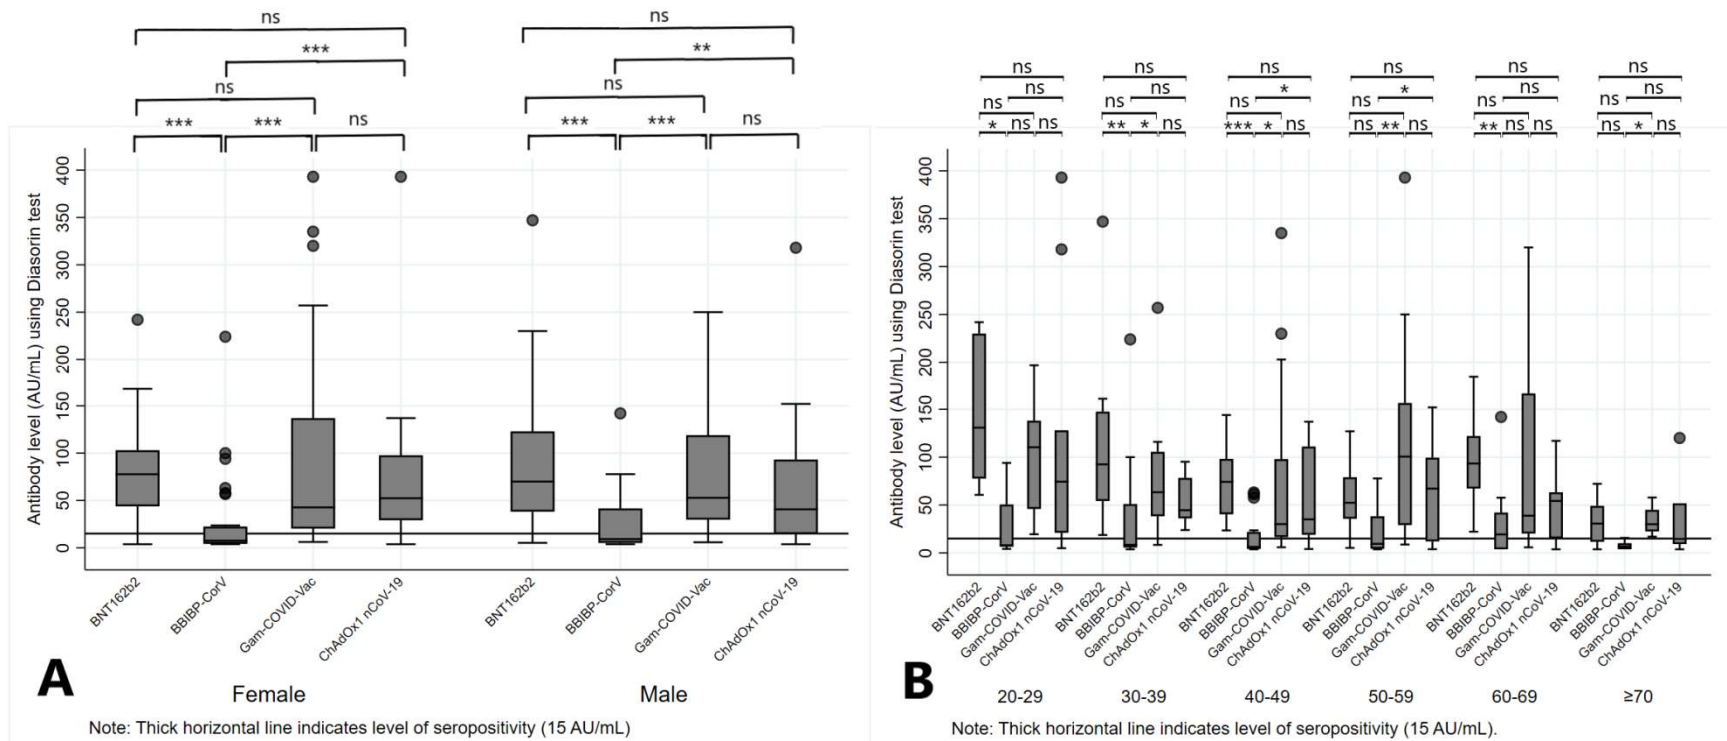

Supplementary Note Fig 1. Distribution of participants, stratified by vaccine type, sex and number of samples (single or paired), after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants.

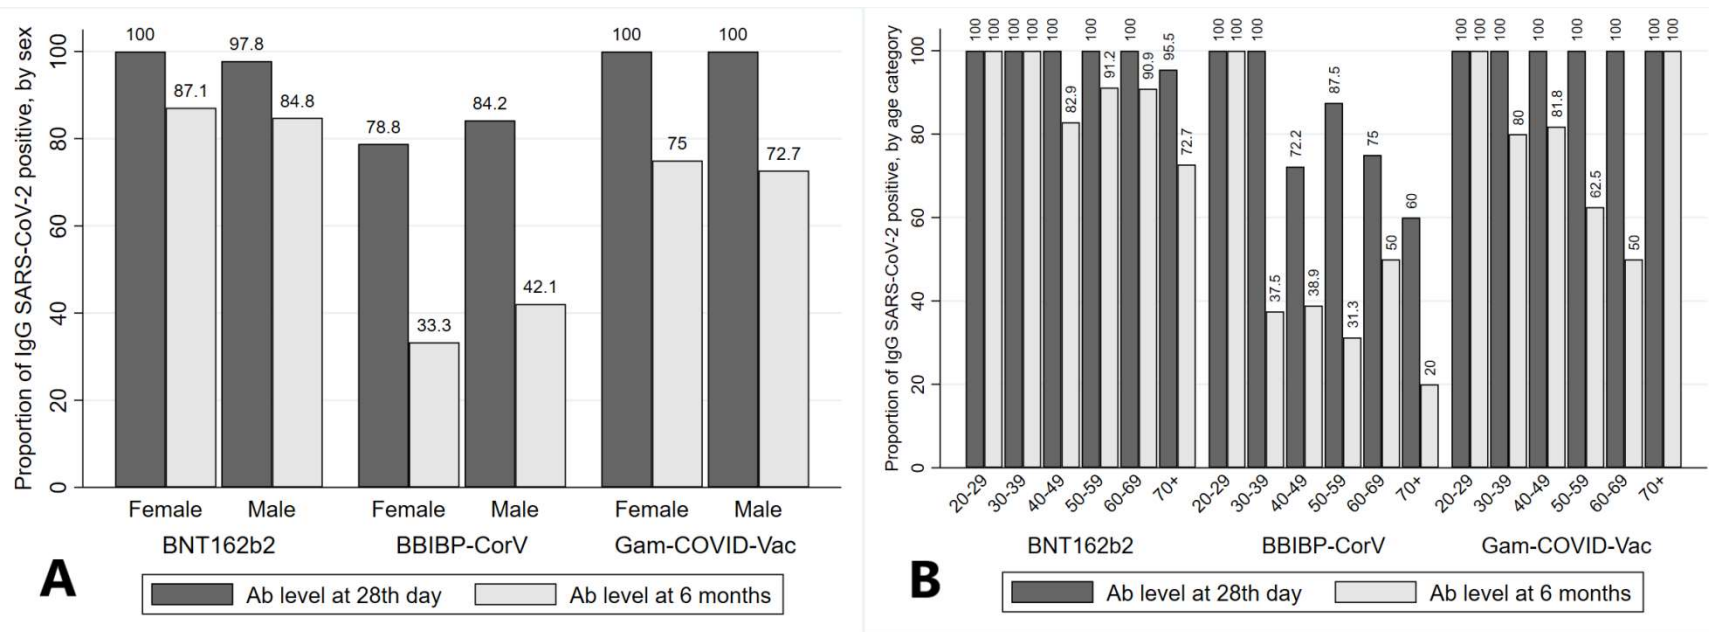

Supplementary Note Fig 2. Antibody levels at 28th day and 6 months after the second dose of vaccine, stratified by sex (A) and age groups (B) of participants, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex-matching participants ***p<0.001, **p<0.01, *p<0.05, ns = not significant.

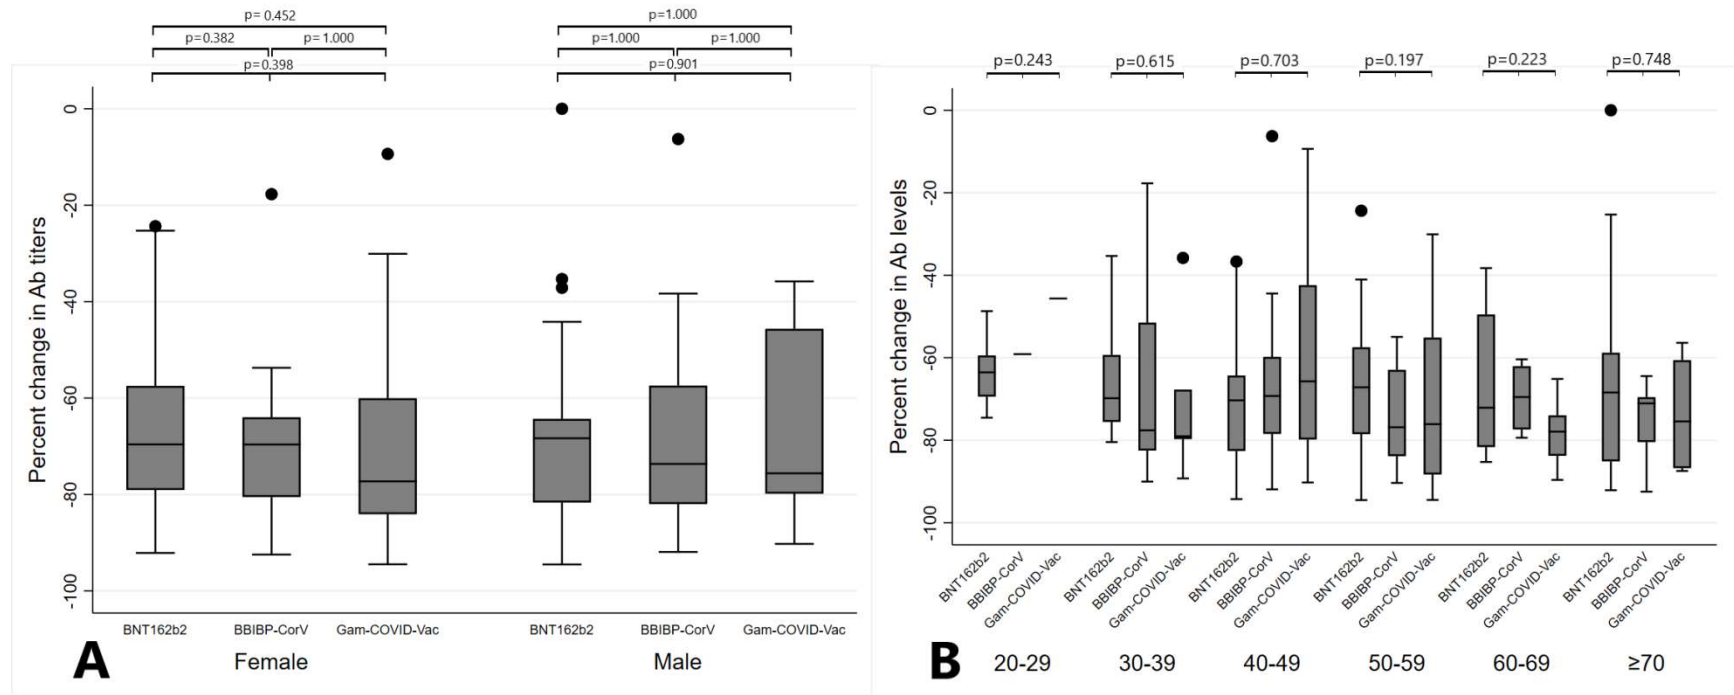

Supplementary Note Fig 3. Correlation between Ab levels at 28th day and 6 months after the second dose of BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C) vaccines, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants. ρ = Spearman's correlation coefficient.

Supplementary Note Fig 4. Antibody levels at 6 months after the administration of BNT162b2, BBIBP-CorV, Gam-COVID-Vac and ChAdOx1 nCoV-19 vaccines, stratified by sex (A) and age groups (B) of participants, after exclusion of one participant with Ab level above the test's upper limit of quantitation (>400 AU/mL) and three age- and sex- matching participants. Legend: ***p<0.001, **p<0.01, *p<0.05, ns = not significant.

Supplementary Note Fig S1. Proportion of seropositive participants at 28th day and 6 months after the second dose of vaccine, by sex (A) and age groups (B) of participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).

Supplementary Note Fig S2. Comparison of the percent change in Ab levels between 28th day and at 6 months from the administration of the second dose of vaccines, stratified by sex (A) and age groups (B) of participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).

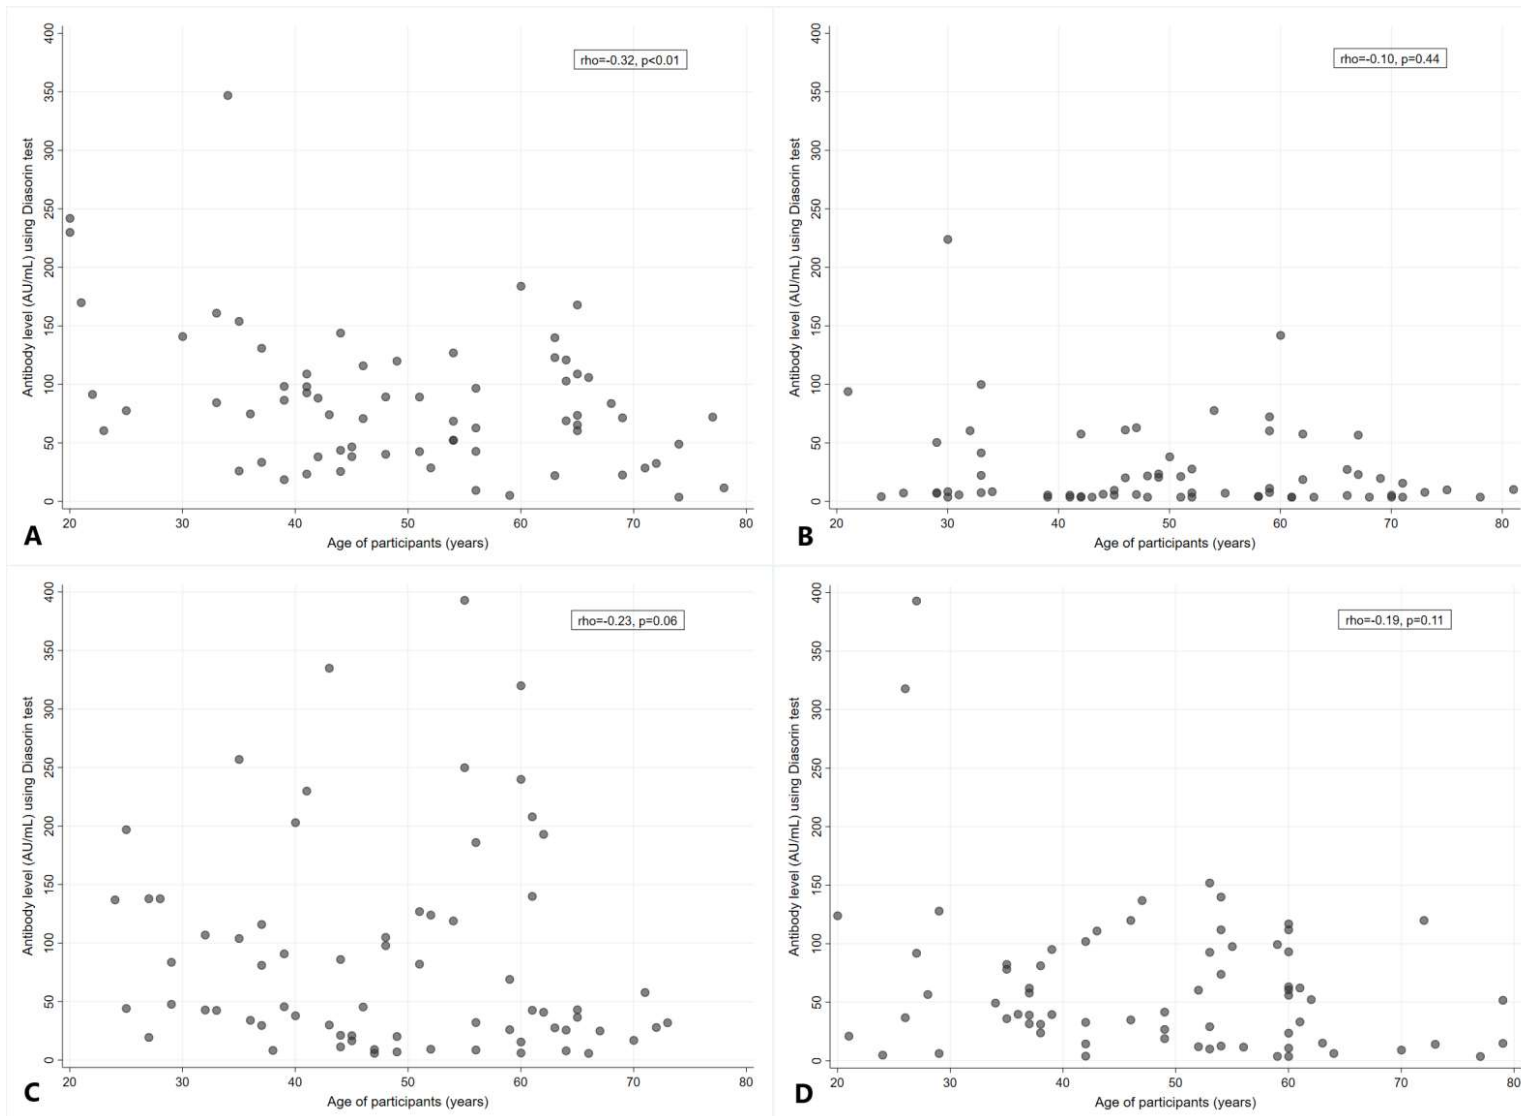

Supplementary Note Fig S3. Correlation between %-change and Ab levels measured at 28th day from the administration of the second dose of BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C) vaccines, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL). rho = Spearman's correlation coefficient.

Supplementary Note Fig S4. Correlation between percent change in Ab levels and levels at 6 months from the administration of the second dose of BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C) vaccines, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL). ρ = Spearman's correlation coefficient.

Supplementary Note Fig S5. Correlation between percent change in Ab levels and age of participants, by BNT162b2 (A), BBIBP-CorV (B) and Gam-COVID-Vac (C), after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL). ρ = Spearman's correlation coefficient

Supplementary Note Fig S6. Correlation between antibody levels measured 6 months post-vaccination after the second dose of BNT162b2 (A), BBIBP-CorV (B), Gam-COVID-Vac (C) and ChAdOx1 nCoV-19(D) vaccines and the age of participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL). ρ = Spearman's correlation coefficient

Supplementary Note Table 1. Antibody levels on 28th day and 6 months after administration of the second dose of vaccine, stratified by sex and age groups of the participants, after exclusion of the participants with Ab levels above the test's upper limit of quantitation (>400 AU/mL).

Note: participants were classified based on the Ab levels at 6 months after vaccination as: seronegative (<12.0 AU/mL), equivocal (12.0 – 15.0 AU/mL), seropositive (>15.0 AU/mL). ¹Pearson's chi-squared test (Fisher's exact test) for categorical and t-test or ANOVA-analysis of variance for continuous variables. Significance levels are given in bold for $p < 0.05$. NA = not applicable.
