

A: Measles

B: Mumps

C: Rubella

Figure S3. Age-specific seroprevalence (%) and geometric mean concentration (GMC) (with 95% confidence intervals) of measles (A), mumps (B), and rubella (C) IgG antibodies in the general population of Bonaire, St. Eustatius and Saba, 2017. Note: antibody concentrations ≥ 0.120 international units (IU)/ml for measles, ≥ 45.0 RIVM units (RU)/ml for mumps, and ≥ 10.0 IU/ml for rubella were considered seropositive (dashed lines).
