#### **1 Membrane preparation schemes**

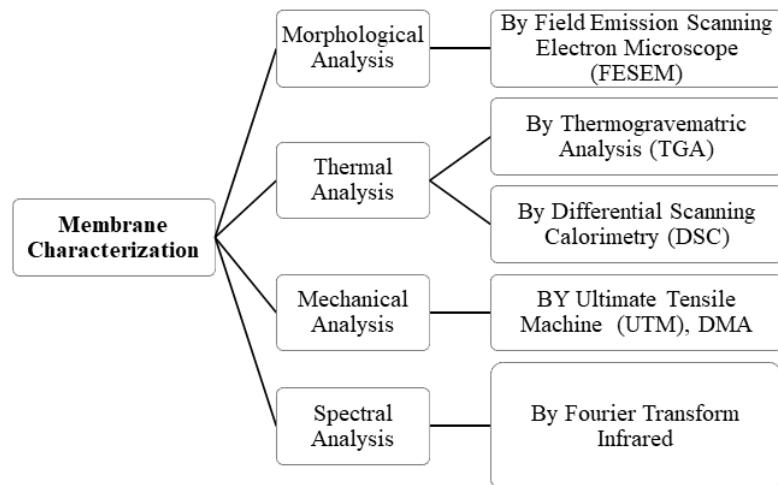

Nine (09) different types of membranes were synthesized in this study. The list of membranes synthesized from this study is tabulated in Table S1.

**Table S1: List of membranes synthesized in this study**

Membranes	PES (wt. %)	CMS (wt. %)	DEA (wt. %)
Pure PES Membrane	20	-	-
Facilitated Transport Mixed Matrix Membrane	20	10	5
	20	10	10
	20	10	15
	20	20	5
	20	20	10
	20	20	15
	20	30	5
	20	30	10
	20	30	15

## 2 Characterization of Developed Membranes

Several characterization techniques were used to analyze the synthesized membranes. The characterization was carried out in four areas including surface and cross-sectional morphological, thermal, spectral and mechanical analyses were performed. Figure S1 shows the equipment used for the characterization.

**Figure S1: Systematic diagram of membrane characterization**

**Table S2: Experimental data**

Pure Polymeric Membrane			
P (bar)	(P/l) <sub>CO<sub>2</sub></sub> (GPU)	(P/l) <sub>CH<sub>4</sub></sub> (GPU)	$\alpha_{CO_2/CH_4}$
2	50.87	16.49	3.08
4	42.41	8.86	4.79
