## Supplementary Equations

$$BMI = \frac{\text{weight Kg}}{\text{height m}^2} \quad (\text{S1})$$

$$DAS28esr = (0.56 \times \sqrt{tjc28} + 0.28 \times \sqrt{sjc28} + 0.7 \times \ln(esr)) \times 1.08 + 0.16 \quad (\text{S2})$$

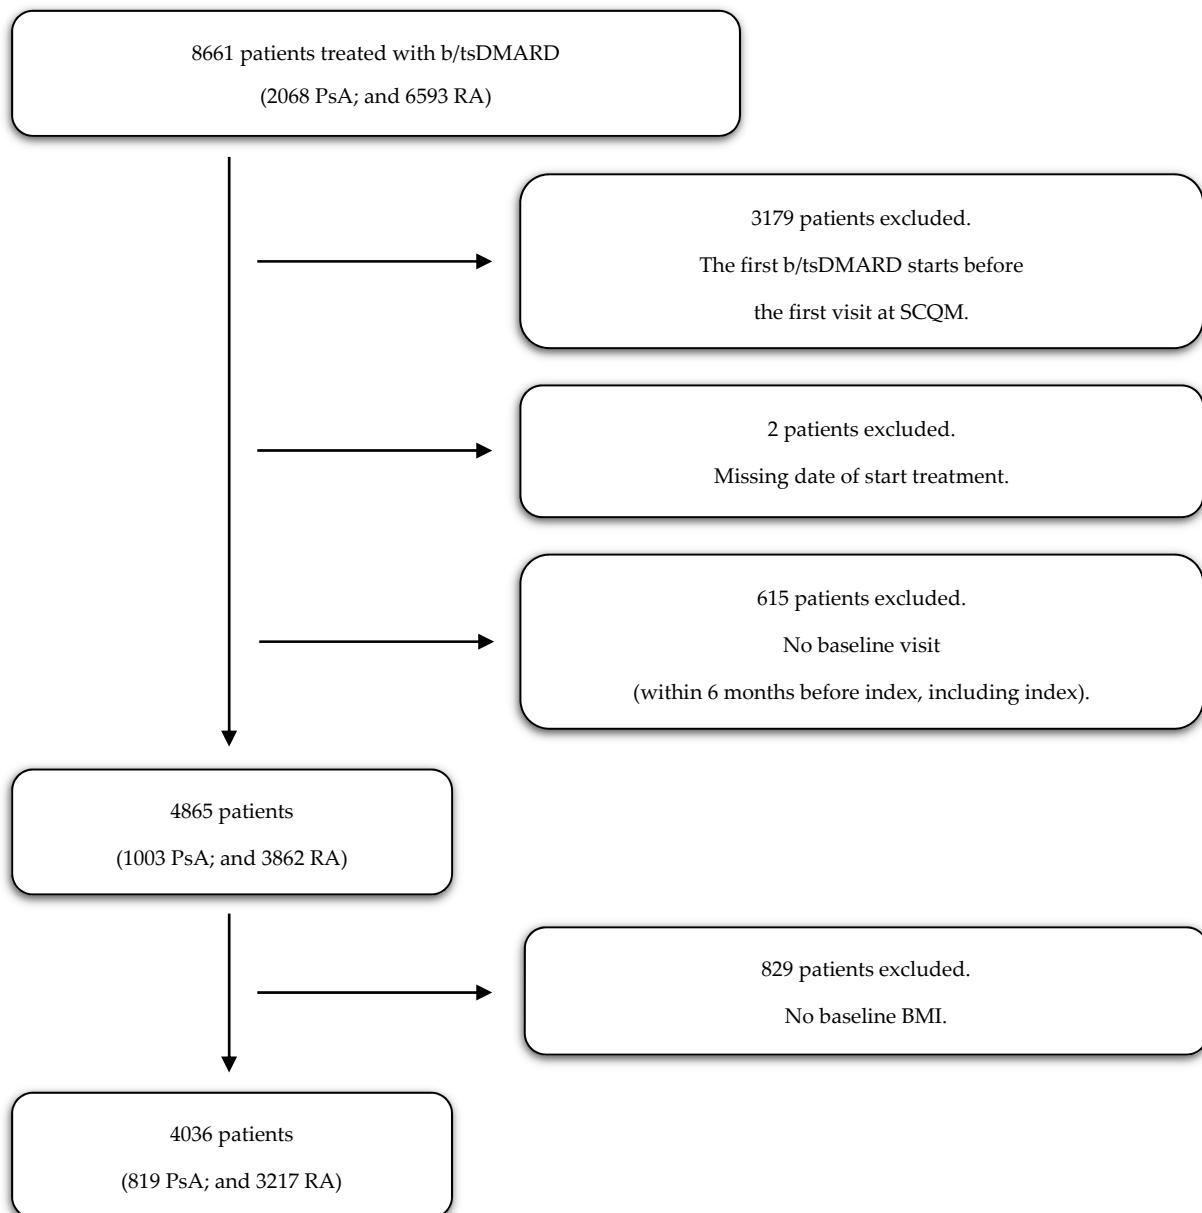

$$DAS28crp = (0.56 \times \sqrt{tjc28} + 0.28 \times \sqrt{sjc28} + 0.36 \times \ln(crp + 1)) \times 1.10 + 1.15 \quad (\text{S3})$$

$$DAPSA = sjc66 + tjc68 + PatActivity + PatPain + crp \quad (\text{S4})$$

$$cDAPSA = sjc66 + tjc68 + PatActivity + PatPain \quad (\text{S5})$$

MDA is achieved if at least 5 of the following items score positive: PatActivity (<2); PatPain (<1.5); HAQ ( $\leq 0.5$ ); sjc ( $\leq 1$ ); tjc ( $\leq 1$ ); enthesitis ( $\leq 1$ ); Skin manifestation none or almost none.

Abbreviations used in the above equations: BMI body mass index; DAS28 Disease Activity Score 28; DAPSA Disease Activity in Psoriasis Arthritis score; cDAPSA clinical DAPSA; MDA Minimal Disease Activity; swc28 Number of swollen joints, counting 28; swc66 Number of swollen joints, counting 66; tjc28 Number of tender joints, counting 28; tjc68 Number of tender joints, counting 68; esr Erythrocyte sedimentation rate; crp C-reactive protein (mg/dl); PatActivity Patient's assessment of disease activity on average the last 24 h (0 very well - 10 very poor); PatPain Patient's assessment of joint pain on average the last 24 h (0 very well - 10 very poor).

**Supplementary Figure S1.** Flow chart reflecting the patient inclusion process. Abbreviations: PsA psoriatic arthritis; RA rheumatoid arthritis; b/tsDMARD biologic or targeted synthetic disease modifying anti-rheumatic drug; SCQM Swiss Clinical Quality Management in Rheumatic Diseases; BMI body mass index.

**Supplementary Table S1.** Characteristics of psoriatic arthritis (PsA) patients starting their first biologic or targeted synthetic disease-modifying anti-rheumatic drug (b/tsDMARD) treatment. Additional variables to complement Table 2 and Table 3.

Values are the number and column percentage, unless otherwise specified. Significance tests compared the overweight and obese categories to the normal weight group using chi-squared test for categorical variables, and t-test for continuous variables. For the tests, missing values did not function as a grouping variable. Abbreviations: n—sample size; SD—Standard deviation.

**Supplementary Table S2.** Characteristics of rheumatoid arthritis (RA) patients starting their first biologic or targeted synthetic disease-modifying anti-rheumatic drug (b/tsDMARD) treatment. Additional variables to complement Table 5 and Table 6.

Values are the number and column percentage, unless otherwise specified. Significance tests compared the underweight, overweight and obese categories to the normal weight group using chi-squared test for categorical variables, and t-test for continuous variables. For the tests, missing values did not function as a grouping variable. Abbreviations: n—sample size; SD—Standard deviation.

**Supplementary Table S3.** First and second biologic or targeted synthetic disease-modifying anti-rheumatic drug (b/tsDMARD) treatment among the psoriatic arthritis (PsA) patients. Only those PsA patients with recorded information on both treatments were included.
