Results expressed as mean  $\pm$  SD or  $n$  (%).GDM, gestational diabetes mellitus; NGT, normal glucose tolerance. P differences between groups analyzed with the  $\chi^2$  test (categorical variable); Student's t test (continuous variables) or the Mann-Whitney U test (not-normal distribution in continuous variables). Verified by the Shapiro-Wilk test. p<sup>a</sup>: compares NGT to GDM in each group (CG and IG); p<sup>b</sup>: compares women with NGT between groups; p<sup>c</sup>, compares women with GDM between groups.

**Table 2.** Children's data at 2 years follow-up according to whether their mothers belonged to the intervention or control group, and subdivided according to BMI (<25kg/m<sup>2</sup> or  $\geq$ 25kg/m<sup>2</sup>).
