Values are demonstrated by means ± SD ( $n = 3$ ). Significant effects of each treatment on values for biomass are denoted by different lowercase letters (one-way ANOVA,  $p < 0.05$ ). T<sub>i-j</sub> means *Bletilla striata* harvested at a certain point (i = 1,2, represents the year after transplanting; j = 7,8,9, represents the month for sampling).

**Table S6.** Accumulation of K, Mg, Ca and Zn in tuber of *B. striata* under Cd treatment control, I, II, III and IV.

Cd treatment		T <sub>1-7</sub>	T <sub>1-8</sub>	T <sub>1-9</sub>	T <sub>2-7</sub>	T <sub>2-8</sub>	T <sub>2-9</sub>

Values are demonstrated by means  $\pm$  SD ( $n = 3$ ). Significant effects of each treatment on values for biomass are denoted by different lowercase letters (one-way ANOVA,  $p < 0.05$ ).  $T_{i-j}$  means *Bletilla striata* harvested at a certain point ( $i = 1, 2$ , represents the harvest year;  $j = 7, 8, 9$ , represents month for sampling). The Accumulation of K, Mg, Ca and Zn was calculated from Eq.1 The Accumulation = (Nutrient content)  $\times$  (Dry weight) (Eq.1).
