

Supplementary Information

Table S1. The chemical and physical conditions at the start and at the end of each experiment for *Acropora hyacinthus* (Lyudao), *Favites abdita*, *Acropora hyacinthus* (Kochi) and *Platygyra contorta*. Values are mean \pm standard deviation. “tank” means “measured in 5L beaker”, “log5 vials” means “measured in 50 mL Falcon tube containing 10^5 sperm mL $^{-1}$ ”, “control vials” means “measured in 50 mL Falcon tube without sperm and eggs (control)”.
