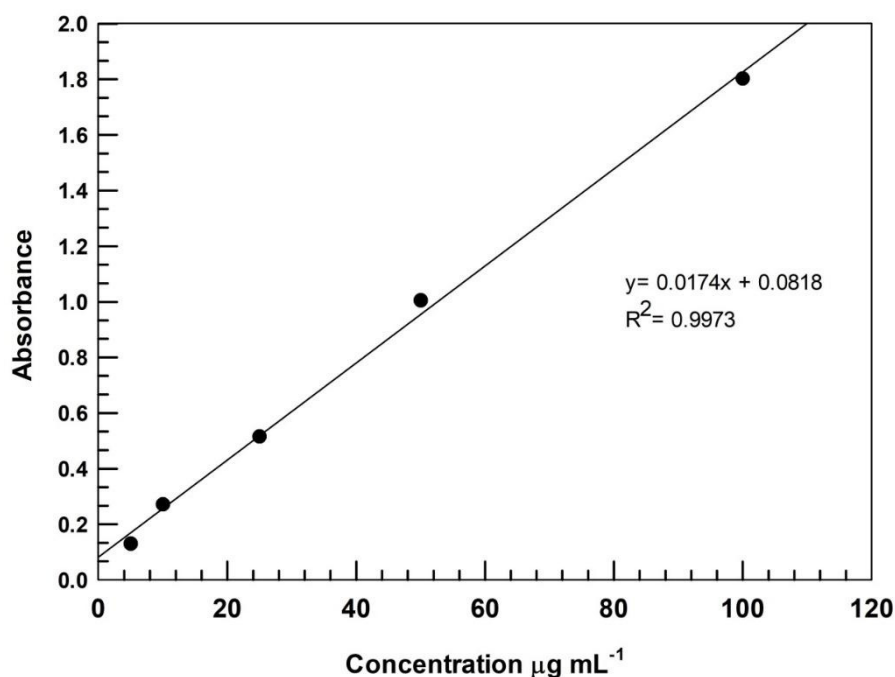

Figure S1. Rutin external calibration curve obtained using a UV-Vis spectrophotometer (Perkin Elmer Lambda 35, Waltham, Massachusetts, USA). The figure reports representative data from three independent experiments.

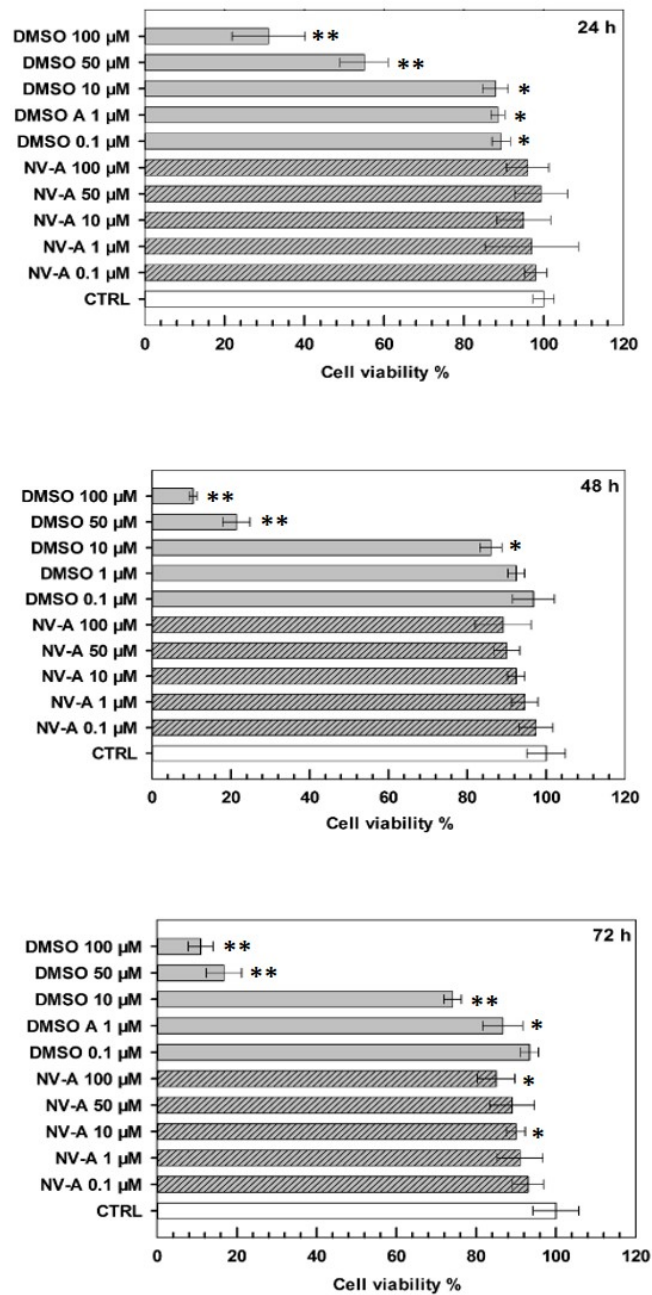

Figure S2. Cytotoxic effects of NV-A and DMSO, used for solubilizing rutin in the other in vitro experiments, of which the concentrations referred to NV-A₄ and the free rutin solution concentrations used at 24 h, 48 h, and 72 h. The results are expressed as mean value of three independent experiments \pm standard deviation.
