Fluoride and Calcium Release from Alkasite and Glass Ionomer Restorative Dental Materials: In-Vitro Study

Alessandro di Lauro ¹, Fabiana Di Duca ^{2*}, Paolo Montuori ², João Paulo Mendes Tribst ³, Amanda Maria de Oliveira Dal Piva ⁴, Alexandre Luiz Souto Borges ⁵ and Pietro Ausiello ¹

Figure 1S. pH changes after three observation times (24 h, 7 and 28 days) and four temperatures (0, 18, 37 and 44 °C) in 3 different buffered solution: **a)** pH = 4.8; **b)** pH = 6.8 and **c)** pH = 8.8.

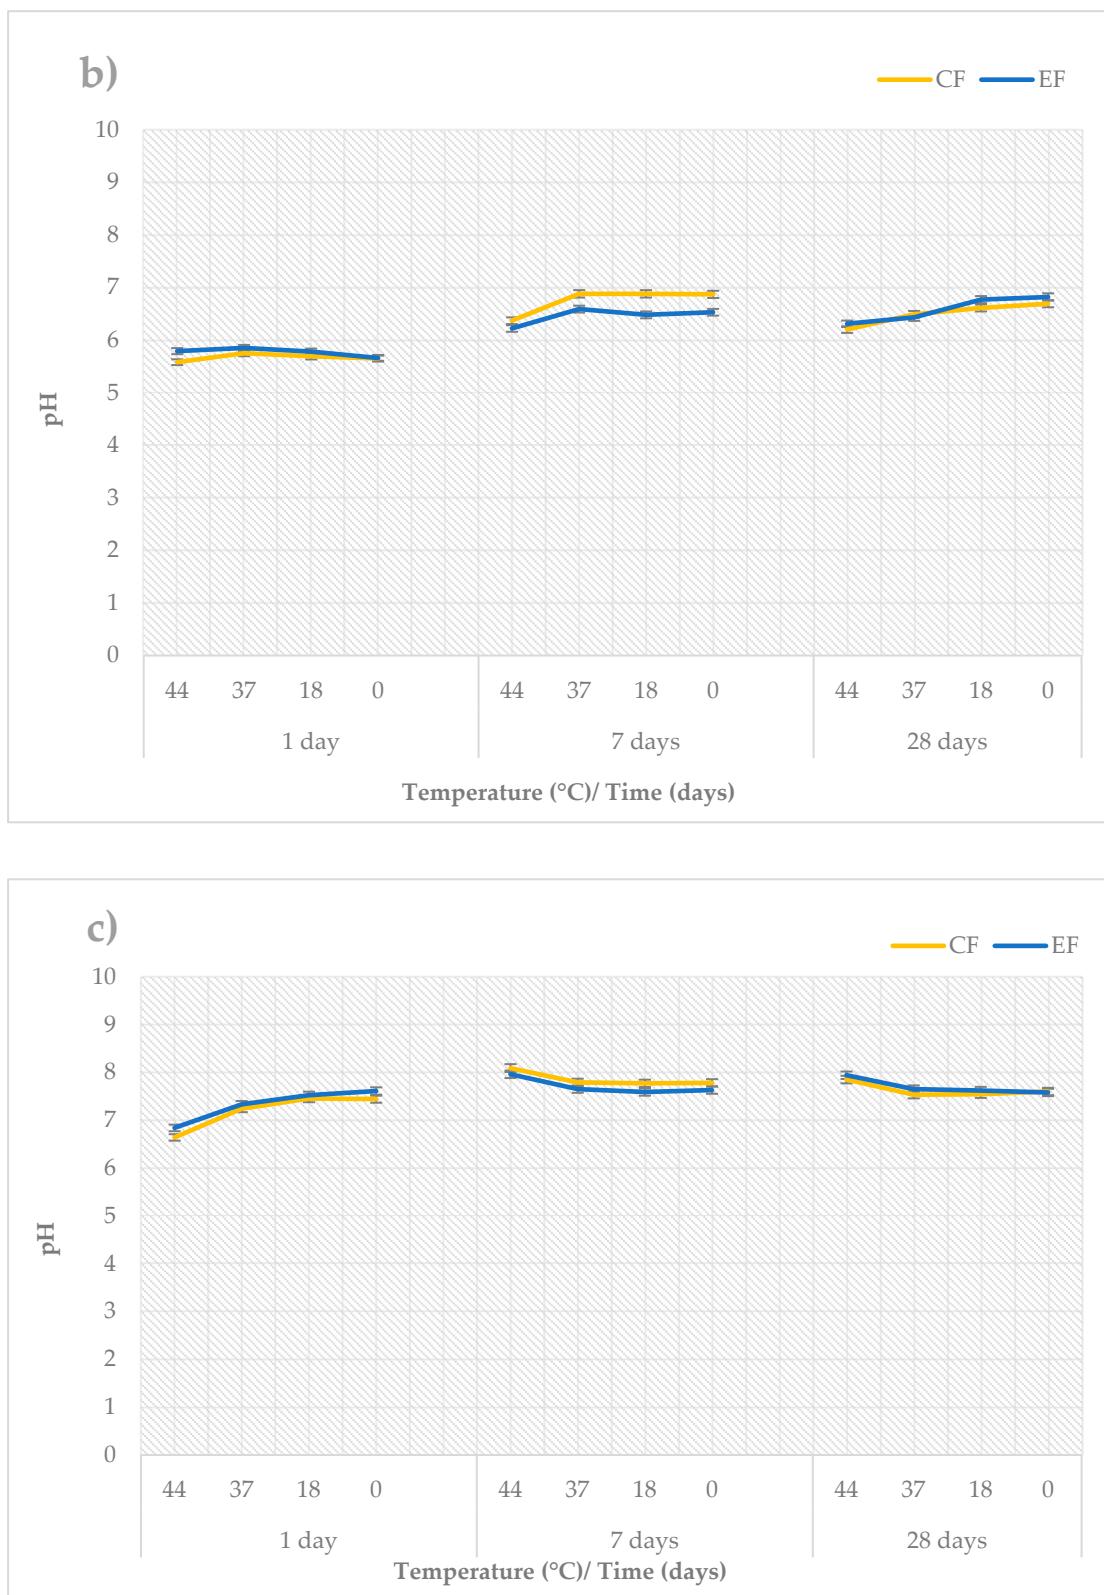

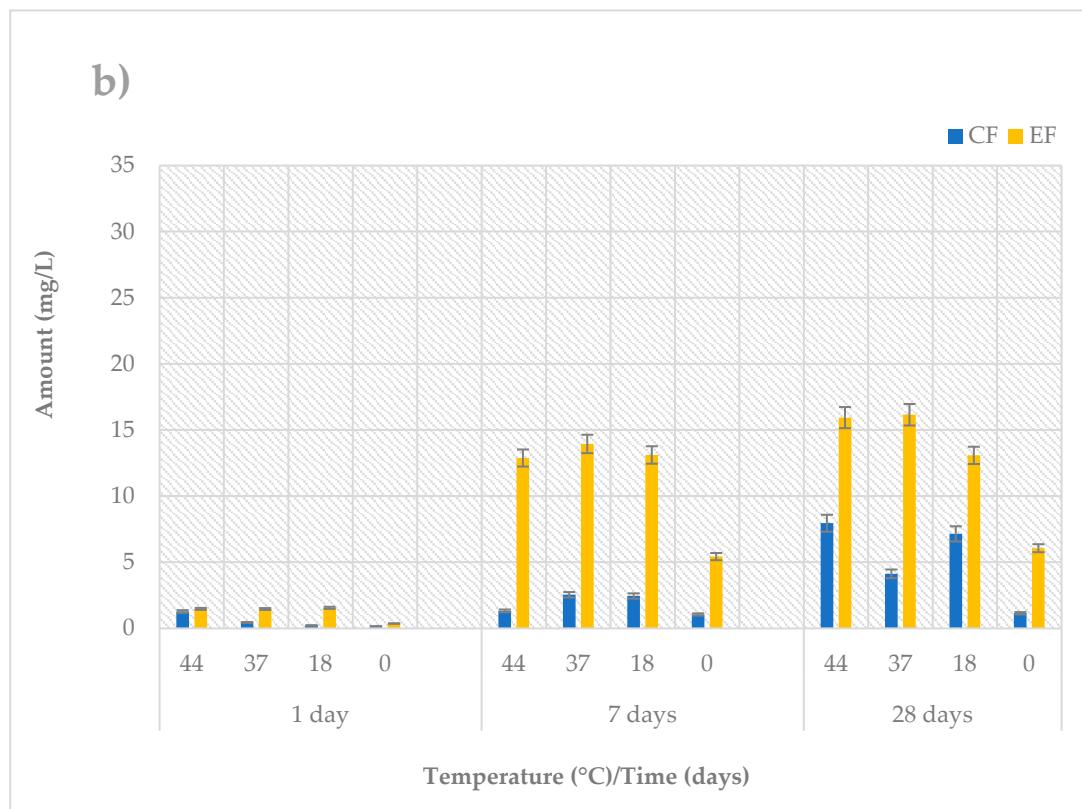

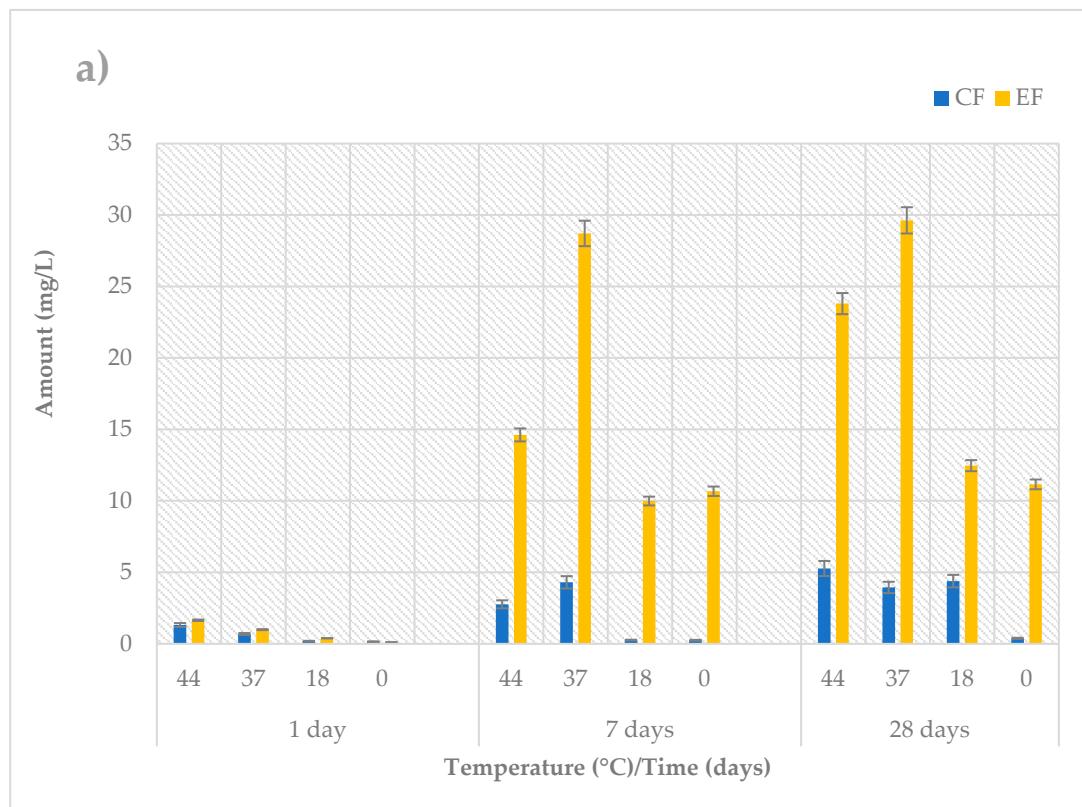

Figure 2S. Average concentration of fluoride ion released from Materials 1 and 2 for three observation times (24 h, 7 and 28 days) and four temperatures (0, 18, 37 and 44 °C) in **a**) acid medium (pH = 4.8); **b**) neutral environment (pH = 6.8); **c**) basic environment (pH = 8.8).

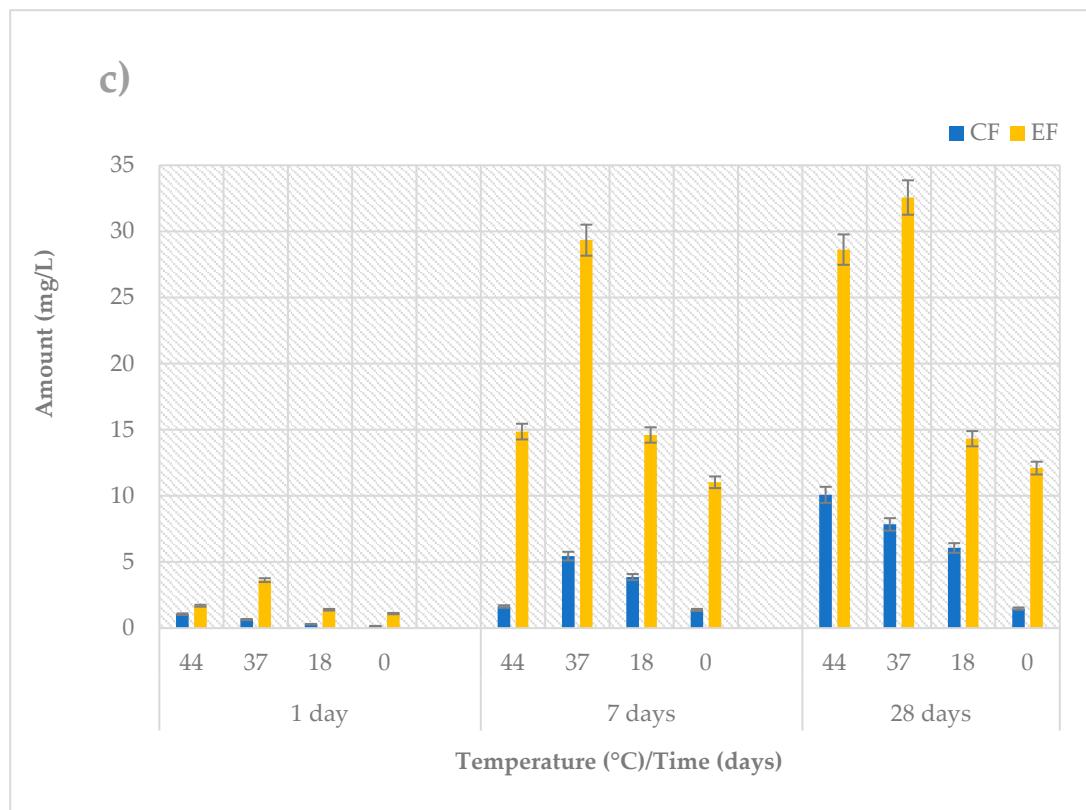

Figure 3S. Average concentration of calcium ion released from the Material 1 and 2 for three observation times (24 h, 7 and 28 days) and four temperatures (0, 18, 37 and 44 °C) in **a**) acid medium ($\text{pH} = 4.8$); **b**) neutral environment ($\text{pH} = 6.8$); **c**) basic environment ($\text{pH} = 8.8$).
