Load and format data

The data is read in and split into sets depending on the number of antenna the data was generated from. This is then flattened and pre processed ready for any required dimensionality reduction.

In [5]:

```
def load_data(phase, magnitude, output_data, antenna_num):

    magnitude_data = []
    phase_data = []
    num_signals = int(magnitude.shape[0]/100)

    for i in range(num_signals):

    phase_data = preprocessing.MinMaxScaler().fit_transform(phase_data)
    output_data = np.asarray(output_data).astype(np.float32)

    return [phase_data, magnitude_data, output_data]
```

In [6]:

Perform dimensionality reduction

Dimensionality reduction may be required depending on the size of the data before learning can be performed. The method below reduces the set to be 10 times smaller through principle component analysis.

In [7]:

```
def perform_dimensionality_reduction(phase_data, magnitude_data):

    n = int(phase_data.shape[1]/10)
    pca = decomposition.PCA(n_components=n)
    pca.fit(magnitude_data)
    magnitude_data = pca.transform(magnitude_data)
    pca.fit(phase_data)
    phase_data = pca.transform(phase_data)

    return [phase_data, magnitude_data]
```

Split into test and train

The data must be shuffled so that a balanced set of data is provided to both the test and train sets. Then data set must be split into test and train sets with the specific split specified.

In [8]:

```
def split_test_train(phase_data, magnitude_data, output_data, split):

    magnitude_data, phase_data, output_data = shuffle(magnitude_data, phase_data, output_data,
                                                       random_state=0)
    x_train_magnitude, x_test_magnitude, x_train_phase, x_test_phase, y_train, y_test = train_test_split(magnitude_data, phase_data, output_data, test_size=split, random_state=0)

    return [x_train_magnitude, x_test_magnitude, x_train_phase, x_test_phase, y_train, y_test]
```

Create MLP

Parameterised creation of the multi-layer perceptron. Allows for different input shapes, specification of number of layers and number of neurons per layer, whether to complete the regression in this model or to leave it open for combination and allows for the specification of activation function.

In [9]:

```
def create_mlp(input_shape, layers, regress, activation_f):

```

Create 1-D CNN

Parameterised creation of the one dimensional convolutional neural network. Allows for different input shapes, specification of number of layers and number of neurons per layer, whether to complete the regression in this model or to leave it open for combination and allows for the specification of activation function.

In [10]:

```

Create LSTM - UNUSED

This method did not produce desireable results so has not been considered in the evaluation of the results.

In [12]:

```
def create_LSTM(input_shape, lstm_layers, layers, regression, activation_f):

Combine models

Take 2 artificial neural networks and combine them. This combination then flows into fully connected layers and the regression is completed with linear activation function

In [13]:

```
def combine_models(phase, magnitude, layers):

    combined = concatenate([magnitude.output, phase.output])

        # x = Dropout(0.3)(x)

    x = Dense(2, activation="linear")(x)

    return Model(inputs=[magnitude.input, phase.input], outputs=x)
```

Display graphs

Displays the graphs of Mean square error and mean absolute error to demonstrate the learning process across epochs.

In [14]:

```
def display_graphs(history):

    plt.plot(history.history['mse'])
    plt.plot(history.history['val_mse'])
    plt.title('Model accuracy mse')

Test the approaches

The approaches above will be tested as follows:

- Perform each of the major approaches (MLP, 1D-CNN, 2D-CNN) on magnitude and phase and then combine them into a regression
- Perform each of the major approaches separately against phase and magnitude

This will be performed against the data from the 2-by-2 antenna array, this data again with PCA performed on it and on data from the 8-by-8 antenna array with PCA performed on it.
