

Supplementary Table 1 Reactions involved in drought metabolic adaptation in terms of biomass production

Reaction ID	Compartment	Reaction name	EC	Reference information	Reference
R00243_c	cytoplasm	glutamate dehydrogenase	1.4.1.2;	Overexpression of <i>E.coli</i> gdhA enhanced drought tolerance and biomass production in tobacco	Mungur et al. (2006) [1]
			1.4.1.3	Overexpression of <i>E.coli</i> gdhA enhanced drought tolerance and biomass production in maize	Lightfoot et al. (2007) [2]
R01070_p	plastid	fructose-bisphosphate aldolase	4.1.2.13	Eight fructose-bisphosphate aldolase family genes in <i>Arabidopsis</i> showed different expression patterns in response to abiotic stresses including drought	Lu et al. (2012) [3]
				Fructose-bisphosphate aldolase family genes in wheat (<i>Triticum aestivum</i> L.) were characterized and some genes involved in responses to various abiotic stresses including drought	Lv et al. (2017) [4]
				Expression of fructose-1,6-bisphosphate aldolase gene was induced by high-salinity and drought in shoreline purslane mangrove (<i>Sesuvium portulacastrum</i>)	Fan et al. (2009) [5]
R00588_x	peroxisome	serine-glyoxylate aminotransferase	2.6.1.45	Serine-glyoxylate transaminase plays an important role in photorespiration during drought stress in barley	Wingler et al. (1999); Wingler et al. (2000) [6,7]
R01388_x	peroxisome	hydroxypyruvate reductase	1.1.1.81	Mutation in the hydroxypyruvate reductase 1 gene of <i>Arabidopsis</i> enhanced the susceptibility to drought stress	Li et al. (2015) [8]
