

1

2 **Figure S1.** This figure shows the comparison between the two lipid extraction techniques regarding
3 their extraction efficiency on each lipid class detected in the rat liver samples by each sample
4 extraction method (Folch liquid-liquid extraction with a composition of chloroform: methanol:
5 water, ~7: 3: 4 , and Protein precipitation liquid extraction with a composition of chloroform:
6 methanol: acetone, ~7: 3: 4). n = 34 rat liver samples per extraction method. The intensity of the
7 lipids were measured by liquid chromatography with mass spectrometry and were not normalised
8 to any internal standard. The significance of the difference between the two extraction protocols are
9 shown by the p-value star system; where $p \leq 0.05$ was considered statistically significant ($p < 0.05 = *$,
10 $p < 0.01 = **$, $p < 0.001 = ***$). Error bars represent \pm standard deviation.

11

12 **Table S1.** This table shows the comparison between the two lipid extraction techniques regarding
 13 their extraction efficiency on the total intensity of each lipid class detected in the rat liver samples by
 14 each sample extraction method (Folch-LLE: Folch liquid-liquid extraction with a composition of
 15 chloroform: methanol: water, ~7: 3: 4, and PPLE: protein precipitation liquid extraction with a
 16 composition of chloroform: methanol: acetone, ~7: 3: 4). n = 34 rat liver samples per extraction method.
 17 The percentage increase the PPLE method is over the Folch-LLE method is shown (% diff.) along with
 18 the p value resulting from a t-test (p<0.05 designates statistical significance are in bold & shaded). The
 19 total number of lipid species detected and pass the quality control process are also shown.

	Folch-LLE total lipid intensity	PPLE total lipid intensity	% diff.	P value
Acyl-carnitines	2.20E+08	3.11E+08	41%	0.00689
Ceramides	3.92E+08	4.25E+08	8%	0.209
Cardiolipins	2.72E+08	3.68E+08	35%	0.000347
Gangliosides (GM1)	3.67E+03	6.59E+05	18,000%	1.61E-13
Hesosyl-ceramides	3.03E+07	2.66E+07	-12%	0.0824
Lysophosphatidylcholines	2.07E+09	3.04E+09	47%	1.57E-06
Lysophosphatidylethanolamines	4.16E+07	5.32E+07	28%	0.0117
Phosphatidic acids	1.50E+08	1.86E+08	24%	8.26E-05
Phosphatidylcholines	3.80E+10	4.23E+10	11%	1.78E-05
Phosphatidylethanolamines	3.68E+09	3.59E+09	-3%	0.235
Phosphatidylglycerols	2.58E+07	3.99E+07	55%	7.05E-05
Phosphatidylinositols	1.58E+09	1.83E+09	16%	0.000833
Phosphatidylserines	5.40E+07	6.71E+07	24%	0.000315
Sphingomyelins	3.87E+09	4.39E+09	13%	0.00157
Sulfatides	1.14E+06	3.38E+06	197%	2.71E-23
Glycerolipids	1.77E+09	1.94E+09	9%	0.441
Total No. of lipid species	455	472		

20

21 **Table S2.** This table shows the lipids quantified in this LC-MS method, along with the ionisation
 22 mode (either positive; +ve, or negative; -ve), the detected ion (m/z), the expected retention time
 23 (minutes) and the internal standard used for normalisation and quantification.. Lipid are shown in
 24 their shorthand notations with the number of carbons and unsaturated bonds in the fatty acid moiety
 25 separated by a colon; acyl-carnitines (Carn), ceramides (Cer), cardiolipins (CL), diacylglycerols (DG),
 26 gangliosides (GM1), hexosylceramides (Hex-Cer), lyso-phosphatidylcholines (LPC), lyso-
 27 phosphatidyethanolamines (LPE), lyso-phosphatidylinositols (LPI), lyso-cardiolipins (Lyso_CL),
 28 phosphatidic acids (PA), phosphatidylcholines (PC), phosphatidylethanolamines (PE),
 29 phosphatidylglycerol (PG), phosphatidylinositols (PI), phosphatidylserines (PS), sulfatides (S),
 30 sphingomyelins (SM), triacylglycerides (TG).
