Supplementary Table S2 (1 of 2)

**Supplementary Table S2 (2 of 2).** All lipid mediators measured in BAT, iWAT, and plasma of mice consuming POLF and SOLF diets. Targeted lipidomics was used to identify lipid mediators altered by diet in BAT, iWAT, and plasma. Lipid mediators are grouped by class and parent fatty acid. Average fold difference was calculated by dividing the average metabolite value for the SOLF diet group by that of the POLF diet group. A student's t-test was used to compare the mean oxylipin concentration between diet groups on log-transformed data, with bolded values in grey boxes indicating significant differences ( $P < .05$ ). N=7-9 mice per group. ND= not detected or low abundance (>25% missing values). Enzymatic pathway abbreviations: COX – cyclooxygenase; LOX – lipoxygenase; Auto- auto-oxidation; CYP – cytochrome P450; sEH – soluble epoxide hydrolase; ADH – alcohol dehydrogenase; PLD – phospholipase D.

	Metabolite	Enzyme	BAT			WAT			Plasma			Average fold difference in SOLF vs POLF

**Table S3** can be found in an excel spreadsheet labeled ‘Supplementary Table S3’.

**Table S4.** Percent of total fold difference by enzymatic pathway. The sum of all fold differences (SOLF/POLF) computed in univariate analyses for those metabolites with significant fold differences within one of the three tissues measured was taken. The contribution of each pathway as a percent of the total fold difference was calculated for each tissue.

	BAT	iWAT	Plasma
Sum of fold differences in SOLF v. POLF diets	94.36	96.42	74.48
% Auto	5.3	3.4	0.7
% COX	6.3	5.5	4.7
% CYP	14.9	14.0	23.6
% sEH	18.8	21.8	25.7
% PLD	8.5	14.3	10.8
% LOX	46.2	41.0	34.5
<b>Total %</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

**Supplementary Table S5.** Average fold difference within each enzymatic pathway. The mean (+/- SEM) was calculated using each average fold difference (SOLF/POLF) computed in univariate analyses for those metabolites with significant fold differences within one of the three tissues measured. A 1-Way ANOVA with Tukey’s post hoc test was used to determine differences in average fold difference between tissues, with P-values <.05 being significant. Letters in the subscript indicate significant (P<.05) differences between tissues as determined by Tukey’s post-hoc test.

Enzymatic pathway	average fold difference (POLF/SOLF) of metabolites within enzymatic pathway			
	BAT	iWAT	Plasma	P-value
Auto-oxidation	$2.51 \pm 0.41^a$	$1.65 \pm 0.36^{ab}$	$0.55 \pm 0.275^b$	.04
COX	$1.98 \pm 0.20^a$	$1.75 \pm 0.16^{ab}$	$0.275 \pm 0.275^b$	.04
CYP	$2.82 \pm 0.47$	$2.70 \pm 0.72$	$3.51 \pm 1.31$	.57
sEH	$1.97 \pm 0.43$	$2.33 \pm 0.31$	$2.13 \pm 0.27$	.81
PLD	$1.34 \pm 0.22$	$2.30 \pm 0.40$	$1.36 \pm 0.27$	.063
LOX	$3.11 \pm 0.41$	$2.83 \pm 0.40$	$3.22 \pm 0.38$	.12
