

Supplementary Figures:

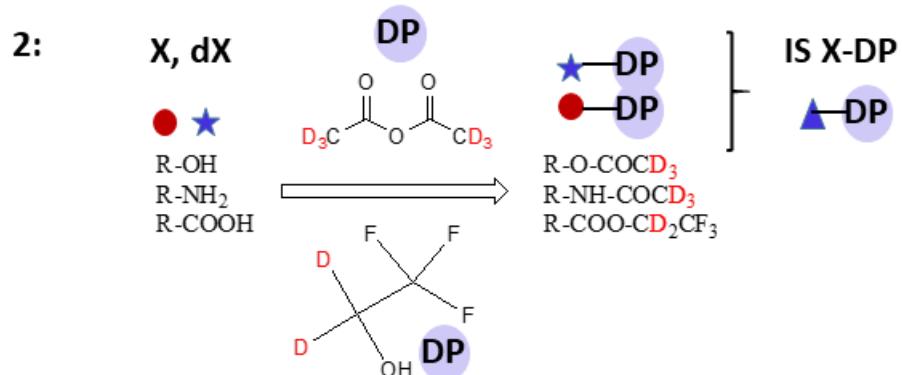

Supplementary Figure 1: Total sum of all amino acids (including non-proteogenic) and all neurotransmitters between healthy control, IBS subtypes, and functional groups. Top significance value denotes the overall significance between all groups. Individual group significance values are pairwise comparisons between healthy controls and the group. Boxplots show median (centre line), 25th and 75th percentile (top and bottom of boxes, respectively), with whiskers representing 1.5 times the inter-quartile range. Abbreviations: healthy control (control), functional constipation (FC), IBS-constipation (IBS-C), functional diarrhea (FD), IBS-diarrhea (IBS-D).

Derivatization Schematic

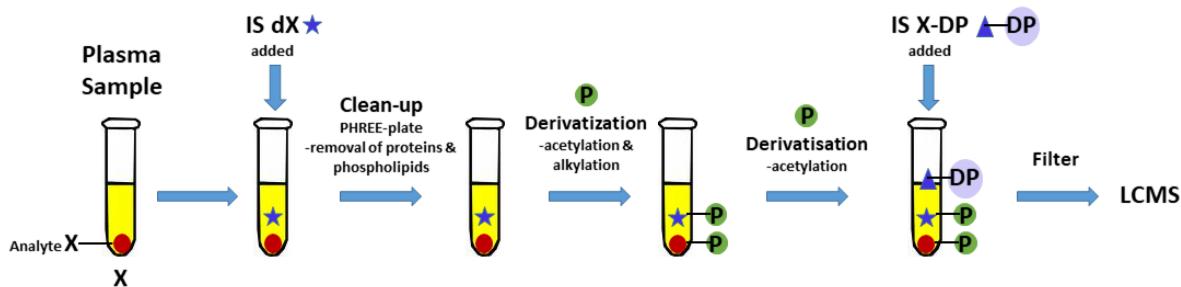

Derivatization of analytes (X) and labelled IS (dX) with probes (P)

Preparation of isotope coding labelled probe internal standard (IS X-DP) by derivatization of analytes (X) and labelled IS (dX) with deuterated probes (DP)

Supplementary Figure 2: Derivatization schematic for plasma neurotransmitter analysis.

Workflow

Supplementary Figure 3: Derivatization workflow for plasma neurotransmitter analysis.

Supplementary Table 1: Output of spearman's rank sum correlation test for healthy control group. Values shown as Rho/significance value.
