Figure S5: Peak area variation of all metabolites identified in the QC sample

Heat maps showing variation in peak area during a chromatographic run. Panel A: positive ion mode. panel B: negative ion mode. A one-minute bin includes all metabolites eluting within this bin. For every bin the median CV in peak area, range of CV values and number of metabolites is indicated. Colour coding indicates median CV.

Figure S6: Separation of the isomeric pairs isoleucine/leucine and betaine/valine

Top panel: XIC of isoleucine (RT: 1.79 min) and leucine (RT: 2.03 min). bottom panel: XIC of betaine (RT: 0.91 min) and valine (RT: 1.09 min)
