4. Materials and Methods

4.6. Chromatographic Analysis

The UV chromatograms of the polyphenolic compounds detected in the analyzed extracts are displayed in Figures S1–S11 (the UV detector operated at $\lambda=330$ nm and for detection of the flavonoids and their aglycones, the UV detector operated at $\lambda=370$ nm).

Figure S1. UV chromatogram of sample M: (1) chlorogenic acid, (2) kaempferol

Figure S2. UV chromatogram of sample S20: (1) chlorogenic acid

Figure S3. UV chromatogram of sample S40: (1) chlorogenic acid

Figure S4. UV chromatogram of sample S60: (1) chlorogenic acid

Table S1 includes the analytical parameters of the database, such as retention time, precursor m/z, and specific ions used for the identification of the polyphenolic compounds, as well as the MS analysis type.

Table S1. MS analysis type and the characteristic ions from the mass spectrum of the analyzed polyphenolic compounds
