

Supplementary Materials

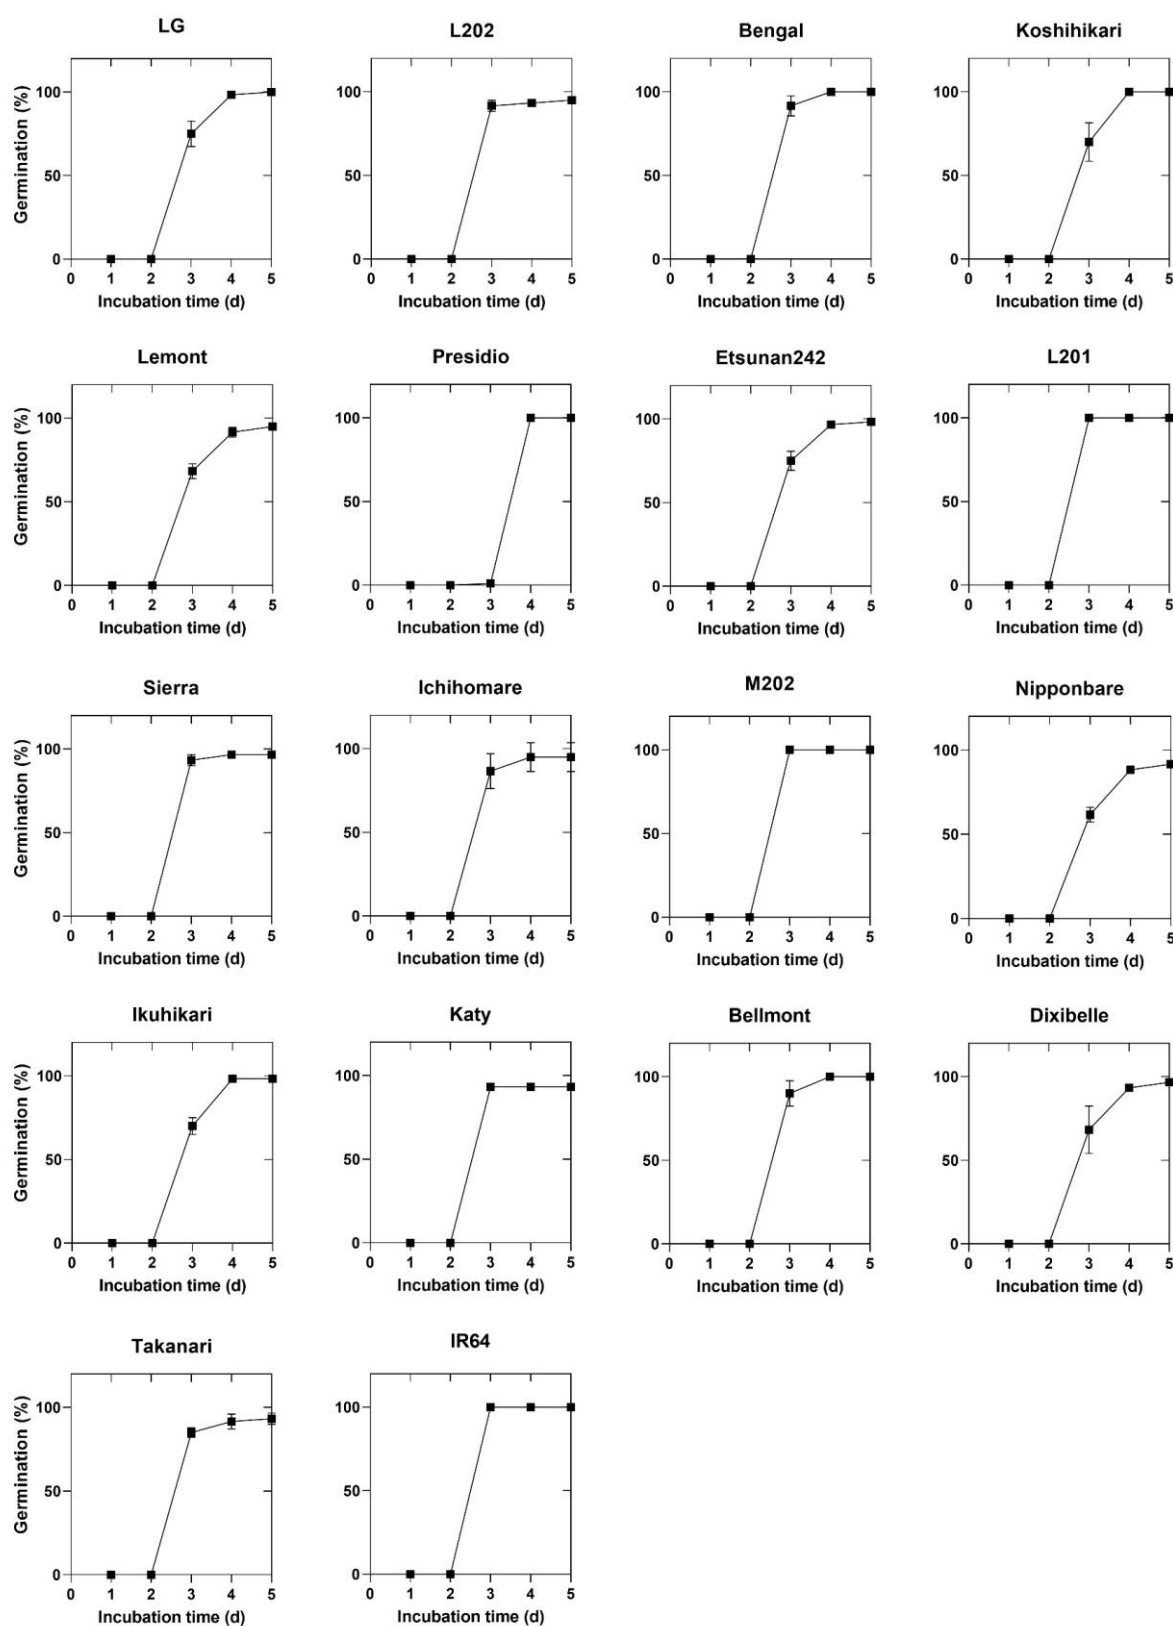

Figure S1. Percent germination of 18 rice genotypes under non-stress conditions. Seeds were incubated at 28 °C (12 h light and 12 h dark) for 5 days. The number of germinated seeds was recorded everyday. Data represent means \pm SE ($n = 3$; 15 seeds per replicate).

Figure S2. Shoot length of 18 rice varieties germinated under anaerobic conditions. Seeds were incubated at 28 °C (12 h light and 12 h dark) for 5 days. Data represent means \pm SE ($n = 15$). Multiple comparisons of means were performed using ANOVA followed by Fisher's least significant difference (LSD) test.
