

Figure S1. Growth in agar of *E. sativa* and *D. tenuifolia* in the presence of selenite concentrations ranging within 0–40 μM . On the right, average total Se concentration in the plants.

Figure S2. Plants of *E. sativa* and *D. tenuifolia* grown in hydroponics with selenate concentrations ranging within 0–40 μM .

Table 1S. Fragmentation pattern of glucosinolates identified in leaves of *E.sativa* and *D. tenuifolia* plants. Compounds were detected in positive ion mode observing sodium adduct [M+Na]⁺ or potassium adduct [M+K]⁺ pseudomolecular ions. Abbreviation DBM-GLS indicate Dimeric-4-mercaptopbutyl glucosinolate. RT = retention time.

Glucosinolate	Fragmentation	[M+Na] ⁺	[M+K] ⁺	RT(min)
Glucoraphanin	316, 218, 136	380		2,129
Glucocheirolin	198, 164, 146	360		2.511
Glucoerucin	202	364	380	5.442
Glucosativin		328		6.645
Neoglucobrassicin		421		7.01
DMB-GLS	513, 479	675	691	6.645

Table 2S. Fragmentation pattern of phenolic compounds identified in leaves and roots of rocket plants. [M+H]⁺ - protonated adduct pseudomolecular ions; RT = Retention Time.

Polyphenol	Fragmentation	[M+H] ⁺	RT (min)
K-3-sinapoil-triglucoside-7-glicoside	301, 179	1139	6.7
K-3-diglucoside-7-glicoside	463, 301	771	7.0
Q-3-glucoside	976, 815, 609, 447	463	7.1
Q-3.4'-diglucoside	285, 257, 151	625	7.2
K-3.4'-diglucoside	447, 285, 255, 151	609	7.2
I-3.4'-diglucoside	447, 315, 300, 285	639	7.5
K-3-O-feruloildiglucoside-7-O-glucoside	653, 285	947	9.1
K-3-glucoside	785, 285, 591	447	9.7
I-3-glucoside	314, 285, 271	477	9.8
Q-3-glucoside 3' (6-sinapoilglucoside)	609, 447	831	10.1
K-3-(2-sinapoil-glucoside)-4'-glucoside	669, 463, 301	815	10.2
K-3-O-feruloil glucoside-7- O-glucoside	623, 447, 285	785	10.5
Q-3.3'.4'-triglucoside	625, 463	787	625, 463
Q-3.4'-diglucoside 3' (6-sinapoilglucoside)	831, 669, 463	993	477, 315
Q-3.4'-diglucoside 3' (6-feruloilglucoside)	831	963	831, 669, 463
