TGY	Y=0.42598X3+0.31507X4+0.03396X12	1197.18	0.9838	0.983

Note: For parameter estimates, the estimated parameter is the coefficient of the independent variable in the model equation, describing the influence of the independent variable on the dependent variable; Pr > χ² is the probability value of the estimated parameter (p<0.05 level). The REG algorithm in SAS 3.0 software was used for multiple regression analysis of the relationship between each endoplasmic factor and the overall acceptance index (overall evaluation). The overall evaluation index was used as the dependent variable (Y), and the four indicators (aroma, soup color, taste,

and infused leaf) as the original independent variables (X_1 , X_2 , X_3 , X_4). Due to the interaction between the indicators and the original independent variables, we set X_{11} , X_{22} , X_{33} , X_{44} , X_{12} , X_{13} , X_{14} , X_{23} , X_{24} , and X_{34} to represent the interaction between the indicators as binary independent variables ($X_{11}=X_1*X_1$, $X_{12}=X_1*X_2$, $X_{13}=X_1*X_3$, $X_{14}=X_1*X_4$, $X_{22}=X_2*X_2$, $X_{23}=X_2*X_3$, $X_{24}=X_2*X_4$, $X_{33}=X_3*X_3$, $X_{34}=X_3*X_4$, $X_{44}=X_4*X_4$), and the original independent variables and binary independent variables were used for multiple regression analysis through the stepwise selection method to filter out the optimal indicators.

Table S4 Parameter estimates, probability values and odds ratios of the influence of consumers' purchase intention

		Aroma	Liquor color	Taste	Infused leaf
WNZ	Parameter estimates	-1.2141	0.3147	1.9279	0.8372
	Pr > χ^2	0.1583	0.6299	0.0724	0.2999

YS	Parameter estimates	0.6146	-0.2586	0.7226	0.3123
	Pr > χ^2	0.1051	0.5581	0.1475	0.5051
	odds ratio	1.849	0.772	2.06	1.367
FD	Parameter estimates	-0.9758	0.2847	2.0799	-0.2165
	Pr > χ^2	0.1662	0.7632	0.0256	0.7313
	odds ratio	0.377	1.329	8.004	0.805
HD	Parameter estimates	0.6796	0.3962	0.2043	0.3138
	Pr > χ^2	0.0276	0.2031	0.4703	0.1661
	odds ratio	1.973	1.486	1.227	1.369
MZ	Parameter estimates	0.2468	0.4449	0.7147	0.1746
	Pr > χ^2	0.5309	0.2199	0.0978	0.5892
	odds ratio	1.28	1.56	2.044	1.191
TGY	Parameter estimates	0.8962	-0.0164	0.4997	0.35
	Pr > χ^2	0.0456	0.9778	0.2832	0.5414
	odds ratio	2.45	0.984	1.648	1.419

Note: For parameter estimates, the estimated parameter is the coefficient of the independent variable in the model equation, describing the influence of the independent variable on the dependent variable; Pr > χ^2 is the probability value of the estimated parameter (p<0.05 level); since consumer purchase intention is a binary variable, we used logistic regression analysis to analyze the influence of four variables (aroma, soup color, taste, and infused leaf) on consumer purchase intention. A consumer's purchase intention score greater than "3" is defined as willing to buy, and a

score less than or equal to "3" is defined as unwilling to buy. Cells marked in red represent significant results.
