AC and AB indicate active and abandoned vineyards, respectively. pH_w and pH_k indicate pH measured in water and in KCl 1N, respectively. C, N and C/N corresponded to total carbon, total nitrogen (both expressed as percentage) and total carbon and total nitrogen ratio, respectively. OM represents soil organic matter content expressed as percentage. Nax, Kx, Cax, Mg_x represent the exchangeable Na, K, Ca and Mg extracted with 1N NH₄Cl and SB indicates sum of bases, all of them expressed as cmol₊ kg⁻¹. Al_x and eCEC represents the exchangeable Al and the effective cation exchange capacity, both expressed as cmol₊ kg⁻¹.
